Catalog Sicis

Examine some of the most recent developments in bibliographic control! Electronic Cataloging: AACR2 and Metadata for Serials and Monographs is a collection of papers about recent developments in metadata and its practical applications in cataloging. Acknowledged experts examine a wide variety of techniques for managing serials and monographs using standards and schemas like MARC, AACR2, ISSN, ISBD, and Dublin Core. From the broadest introduction of metadata usage to the revisions of AACR2 through 2000, this book offers vital analysis and strategy for achieving Universal Bibliographic Control. Electronic Cataloging is divided into three parts. The first is an introduction to metadata, what it is, and its relationship to the library in general. The second portion focuses in more on how metadata can be utilized by a library system and the possibilities in the near future. The third portion is very specific, dealing with individual standards of metadata and elements, such as AACR2 and MARC, as well as current policies and prospects for the future. Information covered in Electronic Cataloging includes: an overview of metadata and why it is important to the cataloging community Universal Bibliographic Control: what has succeeded so far in cataloging and how metadata will evolve the step-by-step process for creating an effective metadata repository for the community the inherent problems that accompany cataloging nonprint research materials, such as electronic serials and the Web metadata schemas and the use of controlled vocabularies and classification systems standards of metadata, including MARC, Dublin Core, RDF, and AACR2, with emphasis on the revisions and efforts made with AACR2 through 2000 an overview of the ISSN (International Serials

Standard Number) and its relationships to current codes and metadata standards, including AACR2 and much more! Electronic Cataloging is the undertaking of three pioneers in library sciences: Sheila S. Intner, Sally C. Tseng, and Mary L. Larsgaard, who co-edited Maps and Related Cartographic Materials: Cataloging, Classification, and Bibliographic Control (Haworth, 2000). With illustrations, references, additional reading lists, and case studies, this research tool offers you tips and strategies to make metadata work for you and your library. No one currently involved in information cataloging should be without this book!

Examine current methods of e-serials cataloging with an accent on online accessibility! This comprehensive guide examines the state of electronic serials cataloging with special attention paid to online capacities. E-Serials Cataloging: Access to Continuing and Integrating Resources via the Catalog and the Web presents a review of the e-serials cataloging methods of the 1990s and discusses the international standards

(ISSN, ISBD[ER], AACR2) that are applicable. It puts the concept of online accessibility into historical perspective and offers a look at current applications to consider. Practicing librarians, catalogers and administrators of technical services, cataloging and service departments, and Web managers will find this book to be an invaluable asset. E-Serials Cataloging: Access to Continuing and Integrating Resources via the Catalog and the Web includes: an annotated bibliography of selected cataloging processes for online e-serials a complete collection of notes used in cataloging AACR2 e-serials the results of a survey on staffing for cataloging e-serials in ALR libraries a literature review of e-serials cataloging in the 1990s This book is an essential resource for anyone involved with the day-to-day processing of electronic serials. E-Serials Cataloging: Access to Continuing and Integrating Resources via the Catalog and the Web provides a complete reference to an information phenomenon that represents a major advance in electronic library science for libraries large and small.

Supplement. 2nd ed

Stay on the cutting edge of the e-serials world with this updated edition! This new edition of the seminal 1998 volume gives you a comprehensive overview of the world of e-serials in one compact volume! With new contributions and updated chapters from authorities in their respective fields, this book covers publishing, pricing, copyright, acquisitions and collection development, cataloging and metadata, preservation and archiving, projects and innovations, indexing, uniform resource identifiers, and citation. From editor Wayne Jones: "Most of the articles in the first edition have been retained, but because so much has happened with e-serials in the last three years, the authors have often had to completely restructure their work to reflect the current situation. There are new articles in this book too, exploring in more detail some topics which took up less room on the plate in the first edition--for example, experimentation by e-journal publishers and tracking titles in aggregator packages." This essential volume: looks at the cost of building and maintaining an e-serials collection examines the perspectives of e-serials customers, intermediaries, and negotiators presents an updated who, what, why, and when for online serials collection development shows how AACR2 can be applied to electronic journals examines electronic journals indexing provides several case studies,

**including D-Lib Magazine and ScienceDirect includes
extensive bibliographies and suggestions for additional
