

## **Catalogo Descriptivo De Las Orquideas Cubanas**

***The intriguing adventures of orchid hunters and the early attempts at orchid identification and classification are described in the pages of Merle A. Reinikka's A History of the Orchid. Part I of this book offers a glimpse of the important dates, names, and incidents relevant to the historical role of orchids from ancient times to the recent past. Part II offers biographical sketches of more than 50 significant figures in orchid history and their contributions to the field. First published in 1972, A History of the Orchid is back with additions to the excellent bibliography and updated nomenclature supplied with the expert help of Robert L. Dressler and Gustavo A. Romero. The first book to bring to public attention the lives of orchid hunters and the myths and mysteries of their beloved plants is now available to a new generation of orchid lovers. Both amateurs and longtime orchid enthusiasts will be thrilled with the return of this book.***

It explores and recommends specific ways that national and local government, legislators, scientists and orchid conservationists as well as growers can all help to reverse present trends. The facts and viewpoints presented in this comprehensive document update and supplement the information available to conservation organizations and agencies through the world so that they can lobby their appropriate government offices more effectively.*

Orchid Biology: Reviews and Perspectives X

International Books in Print

As stated many times before the purpose of Orchid Biology, Reviews and Perspectives (OB) is to present reviews on all aspects of orchids. The aim is not to balance the volume, but to make a balanced and wide ranging presentation of orchids in the world as a whole. The chapters in this, the last volume of the series, range over a number of topics which were not covered before. Singapore is justly famed for its orchids and can be seen on arrival (or departure) in its modern, highly efficient and comfortable Changi Airport and on the way from it to town. Vanda Miss Joaquim, the first hybrid to come from Singapore became its National Flower. This natural hybrid can be seen on its currency, stamps, and public and private decorations. Many excellent breeders

starting with Prof. Eric Holttum who bred the first man made hybrid (Spathoglottis plicata x Primrose), produced numerous magnificent hybrids and won countless awards in Singapore and elsewhere. These hybrids served to enrich the country's orchid mystique. In the opening chapter of this volume Dr. Teoh Eng Soon (Western name Eng Soon Teoh), himself a prize winning orchid breeder, grower and author writes about some of the breeders who contributed to the Singapore orchid fame. Prof. Fitting was one of the best known plant physiologists of his time. As a young man he studied the effects of pollen on orchid flowers.
