The rise of CCTV camera surveillance in Britain has been dramatic. Practically every major city now boasts a CCTV system aimed at, among other things, preventing, detecting and reducing the fear of crime. Increasingly these developments are mirrored in villages, shopping malls, residential estates, transport systems, schools and hospitals throughout the country. In short, for the majority of citizens it is now impossible to avoid being monitored and recorded as we move through public space. Surveillance, CCTV and Social Control represents the first systematic attempt to account for this phenomenon. It brings together leading researchers from the fields of anthropology, criminology, evaluation, geography, sociology and urban planning to explore the development, impact and implications of CCTV surveillance. Accordingly attention is directed to a number of key questions. How does CCTV fit with the trends of late modernity? Does CCTV reduce crime or merely shift it elsewhere? How should CCTV be evaluated? What is the significance of CCTV for women's safety? How adequate is the regulation of CCTV? In the light of recent technological developments what is the future of CCTV surveillance?

A guide for facility managers of varying types of facilities including, apartment buildings/complexes, office buildings, retail stores, educational facilities (schools), restaurants, and countless others. It will look specifically at the physical similarities inherent in all buildings/facilities and delve into the operational/maintenance needs, access control, audit procedures and emergency procedure requirements. It provides procedures and policy direction in facilities that are lacking such formalized doctrine and gives a starting point to run their facilities in a consistent manner with a focus on safety and security, as well as keeping control of liability risk.

Candidates for the CISSP exam can now go directly to the source for study materials that are indispensable in achieving certification. The Official (ISC)2 Guide to the CISSP Exam is derived from the actual CBK review course created and administered by the non-profit security consortium (ISC)2. In addition to being an invaluable study guide, this book is detailed enough to serve as an authoritative information security resource. Both of the guide's co-authors are CISSPs, and the entire text has been reviewed and approved by Hal Tipton, Co-Founder and Past President of ISSA and Co-Founder of (ISC)2. The ten subject areas included, each a section from the Common Body of Knowledge (CBK), have been reviewed by multiple CISSPs, all of whom are recognized leaders in their fields. A CISSP certification garners significant respect, signifying that the recipient has demonstrated a higher standard of knowledge, proficiency, and ethics. This book ensures that a student is fully prepared to face the exam's rigorous criteria. It is crafted to match the overall theme of the exam, which emphasizes a general, solutions-oriented knowledge of security that organizations want.

This text presents a comprehensive assessment of the impact of CCTV on the police in Britain. The volume examines how the police in Britain first became involved in public area surveillance and how they have since attempted to use CCTV technology to prevent, respond to, and investigate crime.

This single resource for the fire safety community distills the most relevant and useful science and research into a consensus-based guide whose key factors and considerations impact the response and behavior of occupants of a building during a fire event. The Second Edition of SFPE's Engineering Guide: Human Behavior in Fire provides a common introduction to this field for the broad fire safety community: fire protection engineers/fire safety engineers, human behavior scientists/researchers, design professionals, and code authorities. The public benefits from consistent understanding of the factors that influence the responses and behaviors of people when threatened by fire and the application of reliable methodologies to evaluate and estimate human response in buildings and structures. This Guide also aims to lessen the uncertainties in the "people components" of fire safety and allow for more refined analysis with less reliance on arbitrary safety factors. As with fire science in general, our knowledge of human behavior in fire is growing, but is still characterized by uncertainties that are traceable to both limitation in the science and unfamiliarity by the user communities. The concepts for development of evacuation scenarios for performance-based designs and the technical methods to estimate evacuation response are reviewed with consideration to the limitation and uncertainty of the methods. This Guide identifies both quantitative and qualitative information that constitutes important consideration prior to developing safety factors, exercising engineering judgment, and using evacuation models in the practical design of buildings and evacuation procedures. Besides updating material in the First Edition, this revision includes new information on: Incapacitating Effects of Fire Effluent & Toxicity Analysis Methods Occupant Behavior Scenarios Movement Models and Behavioral Models Egress Model Selection, Verification, and Validation Estimation of Uncertainty and Use of Safety Factors Enhancing Human Response to Emergencies & Notification of Messaging The prediction of human behavior during a fire emergency is one of the most challenging areas of fire protection engineering. Yet, understanding and considering human factors is essential to designing effective evacuation systems, ensuring safety during a fire and related emergency events, and accurately reconstructing a fire.
