

Chapter 1 Jaanon Th Edwards Funeral Sermons

Examination of the tension between oral composition and poetic creativity

Frontiers and Advances in Molecular Spectroscopy once again brings together the most eminent scientists from around the world to describe their work at the cutting-edge of molecular spectroscopy. Much of what we know about atoms, molecules and the nature of matter has been obtained using spectroscopy over the last one hundred years or so. Going far beyond the topics discussed in Jaan Laane's earlier book on the subject, these chapters describe new methodologies and applications, instrumental developments and theory, which are taking spectroscopy into still new frontiers. The robust range of topics once again demonstrates the wide utility of spectroscopic techniques. New topics include ultrafast spectroscopy of the transition state, SERS/far-uv spectroscopy, femtosecond coherent anti-Stokes Raman spectroscopy, high-resolution laser induced fluorescence spectroscopy, Raman spectroscopy and biosensors, vibrational optical activity, ultrafast two-dimensional spectroscopy, biology with x-ray lasers, isomerization dynamics and hydrogen bonding, single molecule imaging, spectra of intermediates, matrix isolation spectroscopy and more. Covers spectroscopic investigations on the cutting edge of science Written and edited by leading experts in their respective fields Allows researchers to access a broad range of essential modern spectroscopy content from a single source rather than wading through hundreds of scattered journal articles

LLBA contains abstracts of the world's literature in linguistics and language-related research, book abstracts, book review listings, and enhanced bibliographic citations of relevant dissertations." Related disciplines such as anthropology, education, ethnology, information science, medicine, and communications are covered. Also includes some reference to papers in published conference proceedings.

Much of what we know about atoms, molecules, and the nature of matter has been obtained using spectroscopy over the last one hundred years or so. In this book we have collected together twenty chapters by eminent scientists from around the world to describe their work at the cutting edge of molecular spectroscopy. These chapters describe new methodology and applications, instrumental developments, and theory, which is taking spectroscopy into new frontiers. The range of topics is broad. Lasers are utilized in much of the research, but their applications range from sub-femtosecond spectroscopy to the study of viruses and also to the investigation of art and archeological artifacts.

Three chapters discuss work on biological systems and three others represent laser physics. The recent advances in cavity ringdown spectroscopy (CRDS), surface enhanced Raman spectroscopy (SERS), two-dimensional correlation spectroscopy (2D-COS), and microwave techniques are all covered. Chapters on electronic excited states, molecular dynamics, symmetry applications, and neutron scattering are also included and demonstrate the wide utility of spectroscopic techniques. * provides comprehensive coverage of present spectroscopic investigations * features 20 chapters written by leading researchers in the field * covers the important role of molecular spectroscopy research concerned with chemistry, physics, and biology

The concept of intimacy puts forth important challenges to contemporary cultural psychology.

Intimacy refers to a felt experience of interiority that although is intuitively comprehensible, does not have rigorously defined limits. Intimacy can refer to a content, an object, a person, ownership, or even a part of one's own body. A potentially problematic issue for cultural psychology is that acknowledging intimacy seems to bound the Self to areas disjointed from the

social sphere. In a globalized world, we witness a developmental process where social life becomes sectioned, where people are involved in an identity search by foregrounding certain social roles. With this backdrop in mind, people redefine and rebuild their intimacy spaces and the ways they roam from these to the public and collective realm. Exploring the current historical situation leads us to consider intimacy as culture in the making; certainly, in the way it manifests itself, but particularly in how we approach and understand it. The lived (experienced) dimension of intimacy becomes truly important, since it casts new light on what we mean by intimacy in different spheres of the self's life, as well as life with others.

The economic and political empowerment of women continues to be a central focus for development agencies worldwide; access to medical care, education and employment, as well as women's reproductive rights remain key factors effecting women's autonomy. Feminisms, Empowerment and Development explores what women are doing to change their own personal circumstances whilst providing an in-depth analysis of collective action and institutionalized mechanisms aimed at changing structural relations. Drawing on unique, original research and approaching empowerment as a complex process of negotiation, rather than a linear sequence of inputs and outcomes, this crucial collection highlights the difficulty of creating common agendas for the advancement of women's power and rights, and argues for a more nuanced, context-based approach to development theory and practice. An indispensable text for anyone interested in gender and development, this book shows that policies and approaches to development that view women as instrumental to other objectives will never promote women's empowerment as they fail to address the structures by which gender inequality is perpetuated over time.

The Road to Judgment

All psychological processes—like biological and social ones—are dynamic. Phenomena of nature, society, and the human psyche are context bound, constantly changing, and variable. This feature of reality is often not recognized in the social sciences where we operate with averaged data and with homogeneous stereotypes, and consider our consistency to be the cornerstone of rational being. Yet we are all inconsistent in our actions

within a day, or from, one day to the next, and much of such inconsistency is of positive value for our survival and development. Our inconsistent behaviors and thoughts may appear chaotic, yet there is generality within this highly variable dynamic. The task of scientific methodologies—qualitative and quantitative—is to find out what that generality is. It is the aim of this handbook to bring into one framework various directions of construction of methodology of the dynamic processes that exist in the social sciences at the beginning of the 21st century. This handbook is set up to bring together pertinent methodological scholarship from all over the world, and equally from the quantitative and qualitative orientations to methodology. In addition to consolidating the pertinent knowledge base for the purposes of its further growth, this book serves the major educational role of bringing practitioners—students, researchers, and professionals interested in applications—the state of the art know-how about how to think about extracting evidence from single cases, and about the formal mathematical-statistical tools to use for these purposes.

This book is the first collective volume specifically devoted to the multifaceted phenomenon of intensification, which has been traditionally regarded as related to the expression of degree, scaling a quality downwards or upwards. In spite of the large amount of studies on intensifiers, there is still a need for the characterization of intensification as a distinct functional category in the domain of modification. The eighteen papers of the volume contribute to this aim with a new approach (mainly corpus-based). They focus on intensification from different perspectives (both synchronic and diachronic) and theoretical frameworks, concern ancient languages (Hittite, Greek, Latin) and modern languages (mainly Italian, German, English, Kiswahili), and involve different levels of analysis. They also identify and examine different types of intensifiers, applied to different forms and structures, such as adverbs, adjectives, evaluative affixes, discourse markers, reduplication, exclamative clauses, coordination, prosodic elements, and shed light on issues which have not been extensively studied so far.

Vladimir Mikhailovitch Bekhterev was a pioneering Russian neurologist, psychiatrist, and psychologist. A highly esteemed rival of Ivan Pavlov, his achievements in the areas of personality, clinical psychology, and political and social psychology were recognized and acclaimed throughout the world. Publication of the complete text of *Collective Reflexology* brings to the English-speaking world this brilliant scientist's final theoretical statements on how reflexological principles, which he had been developing over a quarter century, can be extended far beyond analysis of the individual personality. Bekhterev's work grows out of his interest in group psychology and suggestion. This concept of the reflex is much broader than Pavlov's. It is applicable to every variety of life. Bekhterev compared his own analyses to those of other European thinkers such as Comte, LeBon, and Sorokin. Such analyses

strained against the official Marxist-Leninist doctrines of the era. Bekhterev died in 1927, allegedly of poisoning by Stalin's henchman. As with many scientists during the Soviet era, his legacy was suppressed. In the normal course of events his name would have been as well known as that of Freud, Pavlov or, more lately, B.F. Skinner. This first publication of Bekhterev's great work in English fills a void in the fields of psychology, sociology, and the history of science. V.M. Bekhterev was director of the Military Medical Academy in St. Petersburg and founded there its Psychoneurological Institute. Among his many books are *Suggestion: Its Role in Social Life* (available from Transaction) and *The Subject Matter and Goals of Social Psychology*. Lloyd H. Strickland is professor of psychology at Carleton University. He is the author of numerous journal articles and editor of *Directions in Soviet Social Psychology* and *Soviet and Western Perspectives in Social Psychology*. "Bekhterev (1857-1927) is a formidable figure, and his work continues to deserve careful study."-Canadian Psychology

Polymer science is a technology-driven science. More often than not, technological breakthroughs opened the gates to rapid fundamental and theoretical advances, dramatically broadening the understanding of experimental observations, and expanding the science itself. Some of the breakthroughs involved the creation of new materials. Among these one may enumerate the vulcanization of natural rubber, the derivatization of cellulose, the giant advances right before and during World War II in the preparation and characterization of synthetic elastomers and semi-crystalline polymers such as polyesters and polyamides, the subsequent creation of aromatic high-temperature resistant amorphous and semi-crystal line polymers, and the more recent development of liquid-crystalline polymers mostly with n~in-chain mesogenicity. other breakthroughs involve the development of powerful characterization techniques. Among the recent ones, the photon correlation spectroscopy owes its success to the advent of laser technology, small angle neutron scattering evolved from n~clear reactors technology, and modern solid-state nuclear magnetic resonance spectroscopy exists because of advances in superconductivity. The growing need for high modulus, high-temperature resistant polymers is opening at present a new technology, that of more or less rigid networks. The use of such networks is rapidly growing in applications where they

are used as such or where they serve as matrices for fibers or other load bearing elements. The rigid networks are largely aromatic. Many of them are prepared from multifunctional wholly or almost-wholly aromatic kernels, while others contain large amount of stiff difunctional residus leading to the presence of many main-chain "liquid-crystalline" segments in the "infinite" network.
