Raising a prodigal is every Christian parent's worst nightmare. Horrifyingly, George Barna contends that over 60 percent of Christian kids will run off to university and "lose their faith." Some pollsters believe the number is as high as 80 percent. But there is great news! Your child doesn't have to become a statistic. Your child can become an adult who loves the Lord the same way you do — but this will likely require a radical parenting reset on your part. Todd Friel has witnessed to hundreds of university students, most of whom are Bible-belt backsliders. *Reset for Parents* gets to the heart of the issue and presents a

The Verilog Hardware Description Language has had an amazing impact on the modern electronics industry, considering that the essential composition of the language was developed in a surprisingly short period of time, early in 1984. Since its introduction, Verilog has changed very little. Over time, users have requested many improvements to meet new methodology needs. But, it is a complex and time consuming process to add features to a language without ambiguity, and maintaining consistency. A

group of Verilog enthusiasts, the IEEE 1364 Verilog committee, have broken the Verilog feature doldrums. These individuals should be applauded. They invested the time and energy, often their personal time, to understand and resolve an extensive wish-list of language enhancements. They took on the task of choosing a feature set that would stand up to the scrutiny of the standardization process. I would like to personally thank this group. They have shown that it is possible to evolve Verilog, rather than having to completely start over with some revolutionary new language. The Verilog 1364-2001
