Roughly speaking, the “hanging paragraph” to Bankruptcy Code 1325(a), enacted in 2005, requires that a debtor pay the full debt on any automobile acquired within 910 days before bankruptcy - a boon for car financiers. Prior to 2005 the debtor had to pay only the appraised value of the car - usually a lesser amount. But the

Access Free Chapter 13 Money And The Banking System Reteaching Activity

privilege bestowed on car financiers by the hanging paragraph depends on the financier providing "purchase money" credit. About one-third of the time, however, the financier advances funds to repay a prior car loan as part of the "trade-in" of an old vehicle for a new one. This advance to retire old debt is nick-named "negative equity." Does the presence of negative equity mean that the loan secured by the new car is not a purchase money loan? The courts have ruled, in the main, that the entire loan

is a purchase money loan and so the hanging paragraph applies. Soft-hearted academics favor the debtor and claim that the hanging paragraph no longer applies if the new car secures both a purchase money obligation and the negative equity. This article points out that the financier has a "proceeds" security interest in the new car representing the trade-in of the old car. Therefore, if the old car was encumbered by a purchase money security interest and if the new car is proceeds of the old car, the new car is encumbered by

the purchase money security interest that had previously encumbered the old car. On this logic, the courts are correct and the academics are wrong - unfortunately. This by no means implies that the hanging paragraph is wise policy.

Since 1946, Henry Hazlitt's bestselling Economics in One Lesson has popularized the belief that economics can be boiled down to one simple lesson: market prices represent the true cost of everything. But one-lesson economics tells only half the story. It can explain why markets often work so well, but it can't explain why they often fail so badly--or what we should do when they stumble. As Nobel Prize-winning economist Paul Samuelson quipped, "When someone preaches 'Economics in one lesson,' I advise: Go back for the second lesson." In Economics in Two Lessons, John

Quiggin teaches both lessons, offering a masterful introduction to the key ideas behind the successes--and failures--of free markets. Economics in Two Lessons explains why market prices often fail to reflect the full cost of our choices to society as a whole. For example, every time we drive a car, fly in a plane, or flick a light switch, we contribute to global warming. But, in the absence of a price on carbon emissions, the costs of our actions are borne by everyone else. In such cases, government action is needed to achieve better outcomes. Two-lesson economics means giving up the dogmatism of laissez-faire as well as the reflexive assumption that any economic problem can be solved by government action, since the right answer often involves a mixture of

market forces and government policy. But the payoff is huge: understanding how markets actually work--and what to do when they don't. Brilliantly accessible, Economics in Two Lessons unlocks the essential issues at the heart of any economic question.

Are you behind on your mortgage, taxes, or other bills? Are creditors threatening foreclosure or repossession? Consider Chapter 13 bankruptcy, which lets you reorganize your debts into a repayment plan you can afford--and keep your house, car and other property. At the season of finding out about this current individual's bankruptcy, you may have pondered to yourself how he/she could

You likely even let yourself know that you could never be that individual looking for obligation directing, or more awful, petitioning for bankruptcy. At that point IT HAPPENED. There are auto instalments, contracts, understudy advances, MasterCard instalments and doctor's visit expenses to be paid. Obligation authorities are continually calling you at work and at home. You're living from paycheck-to-paycheck, and regular it's getting to be harder to give your family the essential necessities. For these people, the disgrace that they feel doesn't leave rapidly enough, especially when there are money related crazy people who continually scrutinize persons for going bankrupt. These money related crazy people trust that if people would simply pay their bills and pay them on time, then bankruptcy wouldn't be a choice. Be that as it may, that is the place they are incorrect. Despite regular bankruptcy misguided judgements that exist today, persons are truly and genuinely applying for bankruptcy assurance for reasons that are outside their ability to control. All things considered, there is no compelling reason to feel embarrassed about the authentic business

Sanctions and Anti-Money Laundering Act 2018

Silicon Valley tries to disrupt the world — and the world says “no.” Facebook: the biggest social network in history. A stupendous, world-shaping success. But governments were giving Facebook trouble over personal data abuses, election rigging and fake news. Mark Zuckerberg wondered: what if Facebook could pivot to finance? Or, better: what if Facebook started its own private world currency? Facebook could have so much power that governments couldn't stop them. It would be the Silicon Valley dream. Facebook launched Libra in June 2019. Libra

would be an international currency and payment system. It would flow instantly around the world by phone. It could even “bank the unbanked.” Libra could apparently do all this just by using a “blockchain.” But Libra would also make Facebook too big to control— and to lead the way for Facebook’s Silicon Valley fellows to swing the power of their money as they pleased. Facebook and their friends could work around any single country’s rules. Libra could shake whole economies. And Facebook would become the “digital identity” provider to the world. If you wanted to use money at all, you’d have to go

through Facebook. Governments looked at Libra — and they saw another 2008 financial crisis in the making. Facebook's plan would have made the company even more entrenched — at the cost of broken economies worldwide. Starting with toppling the US dollar. Libra was as incompetent as it was arrogant — and the world stopped it in its tracks. But how did Facebook put forward such a bizarre and ill-considered plan, that left every regulator who saw it reeling in horror? And what happens when another company tries the same trick? Or when Facebook won't take "no" for an answer, and releases the cut-down version
