Writing with warmth and humor, Connie Schultz reveals the rigors, joys, and absolute madness of a new marriage at midlife and campaigning with her husband, Sherrod Brown, now the junior senator from Ohio. She describes the chain of events leading up to Sherrod's decision to run for the Senate (he would not enter the fray without his wife's unequivocal support), and her own decision to step down from writing her Pulitzer Prize-winning column during the course of one of the nation's most intensely watched races. She writes about the moment her friends in the press became not so friendly, the constant campaign demands on her marriage and family life, and a personal tragedy that came out of the blue. Schultz also shares insight into the challenges of political life: dealing with audacious bloggers, ruthless adversaries, and political divas; battling expectations of a political wife; and the shock of having staffers young enough to be her children suddenly directing her every move. Connie Schultz is passionate and outspoken about her opinions—in other words, every political consultant's nightmare, and every reader's dream. "[Schultz is] a Pulitzer Prize-winning journalist with a mordant wit. . . . The [campaign memoir] genre takes on new life." —The Washington Post Book World "With her characteristic wit and reportorial thoroughness, [Schultz] describes the behind-the-scenes chaos, frustration and excitement of a political campaign and the impact it has on a candidate's family." —Minneapolis Star Tribune "Witty and anecdotal, whether read by a Democrat or a Republican." —Deseret Morning News "Frank and feisty . . . a spunky tribute to the survival of one woman's spirit under conditions in which it might have been squelched." —The Columbus Dispatch

*Tobacco use kills more people than any other addiction and we know that addiction starts in childhood and youth. We all agree that youths should not smoke, but how can this be accomplished? What prevention messages will they find compelling? What effect does tobacco advertisingâ€™more than \$10 million worth every dayâ€™have on youths? Can we responsibly and effectively restrict their access to tobacco products? These questions and more are addressed in Growing Up Tobacco Free, prepared by the Institute of Medicine to help everyone understand the troubling issues surrounding youths and tobacco use. Growing Up Tobacco Free provides a readable explanation of nicotine's effects and the process of addiction, and documents the search for an effective approach to preventing the use of cigarettes, chewing and spitting tobacco, and snuff by children and youths. It covers the results of recent initiatives to limit young people's access to tobacco and discusses approaches to controls or bans on tobacco sales, price sensitivity among adolescents, and arguments for and against taxation as a prevention strategy for tobacco use. The controversial area of tobacco advertising is thoroughly examined. With clear guidelines for public action, everyone can benefit by reading and acting on the messages in this comprehensive and compelling book.*

Although it was, for decades, by far the wealthiest country in Latin America, and, despite having the world's largest oil reserves, Venezuela is a failed state. How did the country fall into this situation? How it can get out of it? This book analyzes and answers these questions, the most pressing asked by all those who think about the current situation of Venezuela. It concentrates its diagnosis on the 40 years of populism under democracy that allowed Hugo Chavez to reach power, and which resulted in the dramatic impoverishing of Venezuela. Chavismo is analyzed carefully, and the book also considers the effect of global situations on the Venezuela economy.

This volume addresses the interface of two major national problems: the epidemic of HIV-AIDS and the widespread use of illegal injection drugs. Should communities have the option of giving drug users sterile needles or bleach for cleaning needs in order to reduce the spread of HIV? Does needle distribution worsen the drug problem, as opponents of such programs argue? Do they reduce the spread of other serious diseases, such as hepatitis? Do they result in more used needles being carelessly discarded in the community? The panel takes a critical look at the available data on needle exchange and bleach distribution programs, reaches conclusions about their efficacy, and offers concrete recommendations for public policy to reduce the spread of HIV/AIDS. The book includes current knowledge about the epidemiologies of HIV/AIDS and injection drug use; characteristics of needle exchange and bleach distribution programs and views on those programs from diverse community groups; and a discussion of laws designed to control possession of needles, their impact on needle sharing among injection drug users, and their implications for needle exchange programs.

Craig's approach - yoking subject matter and narrative strategies - distinguishes this book from others about Heller's work, which essentially thematize. By contrast, Craig uses Heller's abiding concern with mortality to open previously unexplored areas of his fiction.

In this second edition of The Rise of Western Power, Jonathan Daly retains the broad sweep of his introduction to the history of Western civilization as well as introducing new material into every chapter, enhancing the book's global coverage and engaging with the latest historical debates. The West's history is one of extraordinary success: no other region, empire, culture, or civilization has left so powerful a mark upon the world. Daly charts the West's achievements-representative government, the free enterprise system, modern science, and the rule of law-as well as its misdeeds: two World Wars, the Holocaust, imperialistic domination, and the Atlantic slave trade. Taking us through a series of revolutions, he explores the contributions of other cultures and civilizations to the West's emergence, weaving in historical, geographical, and cultural factors. The new edition also contains more material on themes such as the environment and gender, and additional coverage of India, China and the Islamic world. Daly's engaging narrative is accompanied by timelines, maps and further reading suggestions, along with a companion website featuring study questions, over 100 primary sources and 60 historical maps to enable further study.

"One corner of the great American panorama enlarged to highlight starry-eyed visionaries, political machinations, indefatigable ingenuity, and cockeyed optimism." —Kirkus Reviews The building of the Erie Canal, like the construction of the Brooklyn Bridge and the Panama Canal, is one of the greatest and most riveting stories of American ingenuity. Best-selling author Peter Bernstein presents the story of the canal's construction against the larger tableau of America in the first quarter-century of the 1800s. Examining the social, political, and economic ramifications of this mammoth project, Bernstein demonstrates how the canal's creation helped prevent the dismemberment of the American empire and knit the sinews of the American industrial revolution. Featuring a rich cast of characters, including not only political visionaries like Washington, Jefferson, van Buren, and the architect's most powerful champion, Governor DeWitt Clinton, but also a huge platoon of Irish diggers as well as the canal's first travelers, Wedding of the Waters reveals that the twenty-first-century themes of urbanization, economic growth, and globalization can all be traced to the first great macroengineering venture of American history.

A summary of research about the use of family, friends and neighbours as a natural adjunct to professional human services. The book is also full of practical ideas and examples, covering a range of applications which show how social support can be used in preventative programmes, in medical practice, at work, in caring for the elderly, and in the social services. Gottlieb also uses research to show how alterations to organizational structure can transform an unsupportive milieu into one in which social support plays a prominent part. `...Social Support Strategies, is a useful addition to the SAGE range and to the ever-growing literature on community mental health...This is a useful book for social workers and residen

Climate change poses many challenges that affect society and the natural world. With these challenges, however, come opportunities to respond. By taking steps to adapt to and mitigate climate change, the risks to society and the impacts of continued climate change can be lessened. The National Climate Assessment, coordinated by the U.S. Global Change Research Program, is a mandated report intended to inform response decisions. Required to be developed every four years, these reports provide the most comprehensive and up-to-date evaluation of climate change impacts available for the United States, making them a unique and important climate change document. The draft Fourth National Climate Assessment (NCA4) report reviewed here addresses a wide range of topics of high importance to the United States and society more broadly, extending from human health and community well-being, to the built environment, to businesses and economies, to ecosystems and natural resources. This report evaluates the draft NCA4 to determine if it meets the requirements of the federal mandate, whether it provides accurate information grounded in the scientific literature, and whether it effectively communicates climate science, impacts, and responses for general audiences including the public, decision makers, and other stakeholders.

Current mainstream opinion in psychology, neuroscience, and philosophy of mind holds that all aspects of human mind and consciousness are generated by physical processes occurring in brains. The present volume demonstrates empirically that this reductive materialism is not only incomplete but false. The authors systematically marshal

evidence for a variety of psychological phenomena that are extremely difficult, and in some cases clearly impossible, to account for in conventional physicalist terms.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and

the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
