Thinking on development informs and inspires the actions of people, organizations and states in their continuous effort to invent a better world. This volume examines the ideas behind development: their origins, how they changed and spread over time, and how they may evolve over the coming decades. It also examines the real-life experiences of different countries and organizations have been inspired by, and contributed to, thinking on development. Each chapter will be an analytical survey of thinking about development, highlighting debates and taking into account critical perspectives. The volume is intended as a key reference on the range of concepts used to think about development -their origins, evolution and trajectories- and act as a resource for an audience of scholars, graduate students and practitioners. In rethinking and reframing the American national narrative in a wider context, the contributors to this volume ask questions about both nationalism and the discipline of history itself. The essays offer fresh ways of thinking about the traditional themes and periods of American history. By locating the study of American history in a transnational context, they examine the history of nation-making and the relation of the United States to other nations and to transnational developments. What is now called globalization is here placed in a historical context. A cast of distinguished historians from the United States and abroad examines the historiographical implications of such a reframing and offers alternative interpretations of large questions of American history ranging from the era of European contact to democracy and

reform, from environmental and economic development and migration experiences to issues of nationalism and identity. But the largest issue explored is basic to all histories: How does one understand, teach, and write a national history even as one recognizes that the territorial boundaries do not fully contain that history and that within that bounded territory the society is highly differentiated, marked by multiple solidarities and identities? Rethinking American History in a Global Age advances an emerging but important conversation marked by divergent voices, many of which are represented here. The various essays explore big concepts and offer historical narratives that enrich the content and context of American history. The aim is to provide a history that more accurately reflects the dimensions of American experience and better connects the past with contemporary concerns for American identity, structures of power, and world presence.

Scholars, practitioners, and policymakers will find the book to be a compelling contribution to the study of comparative politics, democratization, and European integration.

This report is intended to stimulate thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories over the next 15 years. As with the NIC's previous Global Trends reports, we do not seek to predict the future, which would be an impossible feat, but instead provide a framework for thinking about possible futures and their implications. In-depth research, detailed modeling and a variety of analytical tools drawn from public, private and academic sources were employed in the production of Global Trends 2030. NIC leadership engaged with experts in nearly 20 countries, from think tanks, banks, government offices and business groups, to solicit reviews of the report.

With many scholars and analysts questioning the relevance of deterrence as a valid strategic concept, this volume moves beyond Cold War nuclear deterrence to show the many ways in which deterrence is applicable to contemporary security. It examines the possibility of applying deterrence theory and practice to space, to cyberspace, and against non-state actors. It also examines the role of nuclear deterrence in the twenty-first century and reaches surprising conclusions.

After visiting Russia in 1921, the journalist Lincoln Steffens famously declared, "I have seen the future, and it works." Steffens referred to the social experiment of technological utopianism he found in the Soviet Union, where subway cars and farm tractors would carry the worker and peasant -- figuratively and literally -- into the twentieth century. Believing that socialism and technology together created a brave new world, Boleslaw Bierut of Poland and Kim Il Sung of North Korea -- and other leaders -- joined Russia's Vladimir Lenin and Leon Trotsky in embracing big technology with a verve and conviction that rivaled the western

world's. Paul R. Josephson here explores these utopian visions of technology -- and their unanticipated human and environmental costs. He examines the role of technology in communist plans and policies and the interplay between ideology and technological development. He shows that while technology was a symbol of regime legitimacy and an engine of progress, the changes it spurred were not unequivocally positive. Instead of achieving a worker's paradise, socialist technologies exposed the proletariat to dangerous machinery and deadly pollution; rather than freeing women from exploitation in family and labor, they paradoxically created for them the dual -- and exhausting -- burdens of mother and worker. The future did not work. The fall of the Soviet Union in 1991 marked the end of communism's self-proclaimed glorious quest to "reach and surpass" the West. Josephson's intriguing study of how technology both helped and hindered this effort asks new and important questions about the crucial issues inextricably linked with the development and diffusion of technology in any sociopolitical system.

This book explores the question of where power lies in the post-Cold War world. The authors identify and discuss the factors which make the United States the world leader in the 1990s, and consider the strengths and weaknesses of countries which may be on the way to becoming leaders in Europe (Russia and the EU) and Asia (Japan and China).

**Twentieth-century Southeastern Europe endured three, separate decades of international and civil war, and was marred in forced migration and wrenching systematic changes. **The studies invite attention to fascism, socialism, and liberalism as well as nationalism and Communism. While most chapters deal with war and confrontation, they focus rather on the remembrance of such conflicts in shaping today's ideology and national identity.**

**Assaults on democracy are increasingly coming from the actions of duly elected governments, rather than coups. Backsliding examines the processes through which elected rulers weaken checks on executive power, curtail political and civil liberties, and undermine the integrity of the electoral system. Drawing on detailed case studies, including the United States and countries in Latin America, Eastern Europe, and Africa, the book focuses on three, inter-related causal mechanisms: the pernicious effects of polarization; realignments of party systems that enable elected autocrats to gain legislative power; and the incremental nature of derogations, which divides oppositions and keeps them off balance. A concluding chapter looks at the international context of backsliding and the role of new technologies in these processes. An online appendix provides detailed accounts of backsliding in 16 countries, which can be found at [www.cambridge.org/backsliding](http://www.cambridge.org/backsliding).**

Getting the Message Through, the companion volume to Rebecca Robbins Raines' Signal Corps, traces the evolution of the corps from the appointment of the first signal officer on the eve of the Civil War, through its stages of growth and change, to its service in Operation DESERT SHIELD/DESERT STORM. Raines highlights not only the increasingly specialized nature of warfare and the rise of sophisticated

communications technology, but also such diverse missions as weather reporting and military aviation. Information dominance in the form of superior communications is considered to be sine qua non to modern warfare. As Raines ably shows, the Signal Corps--once considered by some Army officers to be of little or no military value--and the communications it provides have become integral to all aspects of military operations on modern digitized battlefields. The volume is an invaluable reference source for anyone interested in the institutional history of the branch.

Going After Cacciato (winner of the National Book Award in 1979) was widely acclaimed as one of the most powerful and

emotionally vivid novels about Vietnam. Now, writing with the same sharp, richly expressive language, the same edgy dark humor and complete honesty, and the same rawness of nerve and energy, Tim O'Brien gives us an equally powerful novel about growing up as a child of anxiety—the big anxiety, the one that's been with us since the fifties, when we finally realized that Einstein's theories translated into Russian. It's 1995 and William Cowling is digging a hole in his backyard. He is forty-nine, and after years and years of pent-up terror he has finally found the courage of a fighting man. And so a hole. A hole that he hopes will one day be large enough to swallow up his almost fifty years' worth of fear. A hole that causes his twelve-year-old daughter to call him a "nutto," and his wife to stop speaking to him. A hole that William will not stop digging and out of which rise scenes of his past to play themselves out in his memory. The scenes take him back to his quietly peculiar adolescence (No. 2 pencils had a surprising significance), to his college days, down into the

underground, and up through several stabs at "normal" adulthood . . . they take him from Montana to Florida, from Cuba to California, from Kansas to New York to Germany and back to Montana as he makes his way through an often mystifying—but just as often hilarious—labyrinth of fears and desires, obsessions and obligations, blessed madness and less-than-blessed sobriety . . . they take him into the lives of a shrink who's a whiz, a role reversal and of a dizzying eccentric cheerleader; of radical misfits and misfit radicals; of an ethereal stewardess (the traveling man's dream); and two guerilla commandos who mix shtick and nightmare in their tactical brew. And each scene is a reminder of the unbargained-for-terror that has guided him to the bottom of his hole. For this digging is his final act of "prudence and sanity"—he's taking control, getting there first, robbing his fears of their power to destroy . . . or so he believes. But is this act really sane? Is his daughter's estimation of his emotional well-being ("pretty buggo, too") the only truly sane statement being made? Is

sanity even the issue? In the dazzling final scenes, William turns from the hole—from his past and from his future 0 to himself, digging deeper and deeper to find his answers. The Nuclear Age is pyrotechnically funny and moving, courageous and irreverent. It takes on our supreme unacknowledged terror (whose reality we both refuse to accept and all too easily accommodate ourselves to), finds it lunatic core, and shapes it into a story that speaks of, and to, an entire age: our own, our nuclear age. It is an extraordinary novel.

*Between 1991 and 1993, the Army formulated a fighting doctrine recast to fit the power demands of a new strategic world. This new power-order replaced the Army's earlier "AirLand Battle" doctrine, first issued in 1982. This monograph addresses several questions revolving around the rapid replacement, less than 2 years after its success in the desert war, of a recognized and successful fighting doctrine. Discusses the roots of U.S. Army doctrine and the antecedent developments leading to the Army's recasting of its key battle doctrine. These volatile situations all raise questions about the nature of and prospects for Russia's relations with its neighbors. Like other former European empires, Russia will need to reinvent itself as a global player and as part of a wider community. Trenin's vision of Russia is an open Euro-Pacific country that is savvy in its use of soft power and fully reconciled with its former borderlands and dependents. comprehensive account of the economic, political and legal issues surrounding the creation of the WTO and its evolution. Fully illustrated with colour and black-and-white photos dating back to the early days of trade negotiations, the publication reviews the WTO's achievements as well as the challenges faced by the organisation, and identifies the key questions that WTO members need to address in the future. The book describes the intellectual roots of the trading system, membership of the WTO and the growth of the Geneva trade community, trade negotiations and the development of coalitions among the membership, and the WTO's relations with other international organisations and civil society. Also covered are the organisation's robust dispute settlement rules, the launch and evolution of the Doha Round, the rise of regional trade agreements, and the leadership and management of the WTO.

Drawing on newly opened archives and the reminiscences of the major players, John Lewis Gaddis explains not just what happened but why—from the months in 1945 when the U.S. and the U.S.S.R. went from alliance to antagonism to the barely averted holocaust of the Cuban Missile Crisis to the maneuvers of Nixon and Mao, Reagan and Gorbachev. Brilliant, accessible, almost Shakespearean in its drama, *The Cold War* stands as a triumphant summation of the era that, more than any other, shaped our own. Gaddis is also the author of *On Grand Strategy*.

### **A History**

*How ideas, individuals, and political traditions from Weimar Germany molded the global postwar order* *The Weimar Century* reveals the origins of two dramatic events: Germany's post-World War II transformation from a racist dictatorship to a liberal democracy, and the ideological genesis of the Cold War. Blending intellectual, political, and international histories, Udi Greenberg shows that the foundations of Germany's reconstruction lay in the country's first democratic experiment, the Weimar Republic (1918–33). He traces the paths of five crucial German émigrés who participated in Weimar's intense political debates, spent the Nazi era in the United States, and then rebuilt Europe after a devastating war. Examining the unexpected stories of these diverse individuals—Protestant political thinker Carl J. Friedrich, Socialist theorist Ernst Fraenkel, Catholic publicist Waldemar Gurian, liberal lawyer Karl Loewenstein, and international relations theorist Hans Morgenthau—Greenberg uncovers the intellectual and political forces that forged Germany's democracy after dictatorship, war, and occupation. In restructuring German thought and politics, these émigrés also shaped the currents of the early Cold War. Having borne witness to Weimar's political clashes and violent upheavals, they called on democratic regimes to permanently mobilize their citizens and resources in global struggle against their Communist enemies. In the process, they gained entry to the highest levels of American power, serving as top-level advisors to American occupation authorities in Germany and Korea, consultants for the State Department in Latin America, and leaders in universities and philanthropic foundations across Europe and the United States. Their ideas became integral to American global hegemony. From interwar Germany to the

This is the first book to examine in detail the relationship between the Cold War and International Law. This illustrated book that includes tables, charts, and maps primarily discusses the role of USAREUR (US Army Europe) in rearming and training the new German Army which was perhaps the Army's single greatest contribution toward maintaining security in Western Europe. Likewise, the relationship between American soldiers and their French and West German hosts evolved over time and is a critical element in telling the story of the US Army in Europe.
