Molluscs Marine

Bivalve Molluscs is

commercially (e.g. mussels, oysters, scallops and clams) in a multi-billion dollar worldwide industry. Elizabeth Gosling has written a landmark book that will stand for many years as the standard work on the subject.

used XML. In 2001 they spent about 5.4% of their

development time using XML. For 2002 it is predicted that they will spend an average of 9% of their development time using XML.

Concerning XML databases there are currently two major

XML related database types available. These are native XML and XML enabled relational databases. Native XML databases are constructed to use the recommended XML standards to the most possible extent. Thereby, the

XML document is the fundamental unit of storage. XML enabled relational databases are relational databases equipped with an additional layer to map XML content in to the relational tables. XML documents are only used as a means of
