This volume is about a particular kind of story-telling. Known as the Thematic Apperception Test (TAT), it is a systematic approach to story-telling that provides clinicians with an effective method for investigating those original and highly personal themes that constitute the unique personality of each individual. The first half of the book illuminates the meaning of narratives and the second half explores their implications for therapeutic understanding and treatment. Topics covered include: The history and development of the TAT The

for high-stakes purposes as per such educator evaluation systems. The book also focuses on examinations of educators' perceptions of and reactions to the use of SGMs; ethical implications pertaining to the use of SGMs; contextual challenges when implementing SGMs; and legal implications of SGM use. The use of student test score data has been the cornerstone of the recent transfiguration of educator evaluation systems in forty-two states and the District of Columbia. Three leading voices on SGMs—Sean Corcoran, Henry Braun, and David Berliner—also serve as section and concluding commentators.

The Rise and Fall of National Test Scores examines, in some depth, the nature of test score changes over an extended period of time and in a broad range of subject matters and levels of schooling. The book contains chapters contributed by experts on various aspects of educational tests and score interpretation and uses. The text discusses the interpretations of trends in college admissions test scores and questions about the post-admission performance of ethnic minority students. The book examines general school achievement trends of high school

students and the trends observed in broad-based testing programs of the National Assessment of Educational Progress (NAEP). The complexities involved in obtaining dependable data with which to make informed judgments about reading achievement trends are examined. The text further tackles the positive and negative trends in academic achievement in Science with particular emphasis on the effects of curriculum revision; as well as the problems of mathematics testing. The book then describes test score trends and problems in Great Britain and Ireland, with attention given to

I do not think of myself as primarily interested in method, but in the substance of psychology. Nevertheless, our discipline has such difficulties in coming to grips with its substance that I have found myself getting involved in fww to do it persistently and since the beginning of my career. That career has been divided between diagnosis and research, the balance between them swinging gradually from the former to the latter. To the astonishment of many of my students and colleagues, I have

never become a psychotherapist nor a psychoanalyst, though I have looked closely over the shoulders of many friends at their work, have attended continuous case seminars, and have participated in research on psychotherapy and psychoanalysis enough to feel that I have a pretty good grasp of what that kind of endeavor is like. So I have been writing about method, diagnostic and investigative, for over 25 years, and was happy to accept the suggestion of Seymour Weingarten, of Plenum Press, that I publish a collection of these papers. What has ended up as two volumes was originally conceived as one, for I
