Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Up-to-date new edition of leading textbook on global warming for students and general readers.

This timely book provides a thorough introduction to the inter-relationship of food and the environment. Its primary purpose is to bring to our attention the multiplicity of linkages and interconnections between what we eat and how this impacts on the earth's resources. Having a better idea of the consequences of our food choices might encourage us to develop more sustainable practices of production and consumption in the decades ahead. Although human societies have, over time, brought under control a large proportion of the earth's resources for the purpose of food production, we remain subject to the effective functioning of global ecosystem services. The author highlights the

vital importance of these services and explains why we should be concerned about the depletion of freshwater resources, soil fertility decline and loss of biological diversity. The book also tackles some of the enormous challenges of our era: climate change – to which the agri-food system is both a major contributor and a vulnerable sector – and the prospect of significantly higher energy prices, arising from the peaking of oil and gas supplies which will reveal how dependent the food system has become upon cheap fossil fuels. Such challenges are likely to have significant implications for the long-term functioning of global supply chains and raise profound questions regarding the nutritional security of the world’s population. Taken together the book argues that a re-examination of the assumptions and practices underpinning the contemporary food system is urgently required. Environment and Food is a highly original, inter-disciplinary and accessible text that will be of interest to students and the wider public genuinely interested in and concerned by the state of the world’s food provisioning system. It is richly illustrated with figures and makes extensive use of boxes to highlight relevant examples.

The Complete Guide to Building Your Own Greenhouse

First published in 1895, this vintage book offers the reader a beginner-friendly guide to growing plants in greenhouses and under glass. Written in simple, plain language and profusely-illustrated, this step-by-step guide is ideal for novice gardeners with an interest in greenhouses, and it would make for a useful addition to collections of allied literature. Contents include: "The Construction of Greenhouses", "Heating and General Management", "Appliances and Materials", "Methods of Propagating Plants", "Potting, Watering, Training, and Feeding Plants", "Spring and Summer Flowering Plants", "Autumn and Winter Flowering Plants", "Bulbous and Tuberous-rooted Plants", etc. Many vintage books such as this are becoming increasingly scarce and expensive. It is with this in mind that we are republishing this volume now in a modern, high-quality edition complete with a specially commissioned new introduction on the history of gardening.

A practical handbook for novice and experienced horticulturalists alike provides everything a gardener needs to know about these popular and exotic plants, offering more than two hundred full-color photographs, detailed descriptions, and easy-to-follow care and cultivation instructions for dozens of orchid species. Unlock new growing opportunities and increase your property value with an outdoor conservatory. In this illustrated guide, Roger Marshall shows you how to

build our own greenhouse using simple, easy-to-follow techniques. Covering everything from selecting a site to glazing glass, Marshall includes tips on laying a foundation, construction materials, ventilation, and much more. Whether your goal is to stretch the growing season or create a lush space for a year-round hot tub, you can build the greenhouse of your dreams.
