reading character in faces? Zebrowitz unmask the face and provides the first systematic, scientific account of our tendency to judge people by their appearance. Offering an in-depth analysis of two appearance qualities that influence our impressions of others— “ babyfacedness ” and “ attractiveness ” —and an account of these impressions, Zebrowitz has written an accessible and valuable book for professionals and general readers alike. The assumption that people's faces provide a window to their inner nature has a long and distinguished history, eloquently expressed in the works of ancient philosophers, like Aristotle, and great writers, like Shakespeare. Zebrowitz examines this assumption, focusing on four central points. She shows that facial appearance, particularly

babyfacedness and attractiveness, has a strong impact on how we perceive an individual's character traits and on social outcomes in the workplace, in the criminal justice system, and in other settings. She proposes that facial stereotypes derive from evolutionarily adaptive reactions to useful information that faces can provide. She assesses the accuracy of facial stereotypes in light of plausible links between appearance and character. Finally, Zebrowitz suggests ways to counteract the consequences of reading faces.

Does character determine appearance? Can the shape of a person's face-or the bumps on his head-provide insight into intelligence and personality? What effect, ultimately, do our thoughts and attitudes and personality have on how we look? It's a question that artists and scientists (and dictators) have grappled with for ages, and one that can lead down increasingly slippery slopes. But in pre-Freudian, pre-Holocaust America, when phrenology was still semi-respectable, New Thought pioneer William Walker Atkinson (writing as Theron Q. Dumont) wrote what he hoped would be the ultimate guide to

This Is A New Release Of The Original 1903 Edition.

When nineteenth-century Londoners looked at each other, what did they see, and how did they want to be seen? Sharrona Pearl reveals the way that physiognomy, the study of facial features and their relationship to character, shaped the way that people understood one another and presented themselves. Physiognomy was initially a practice used to get information about

## Online Library Character Reading From The Face The Science Of Physiognomy

others, but soon became a way to self-consciously give information--on stage, in print, in images, in research, and especially on the street. Moving through a wide range of media, Pearl shows how physiognomical notions rested on instinct and honed a kind of shared subjectivity. She looks at the stakes for framing physiognomy--a practice with a long history--as a science in the nineteenth century. By showing how physiognomy gave people permission to judge others, Pearl holds up a mirror both to Victorian times and our own.

faces from the moment our eyes open. We all have the intuitive ability to read and interpret the feelings and expressions of those around us. In *Read the Face*, master face reader Eric Standop unlocks the power of this innate human ability, sharing his own journey to become a face reading master, along with stories that illustrate the power of this unique language. Using a combination of three different schools of face reading, along with a scientific accuracy to detect the most fleeting microexpressions, Standop is able to read personality, character,

emotions, and even the state of a person's health—all from simply glancing at their face. The book is divided into sections focusing on specific ways that face reading can offer insight, such as Health, Love, Communication, Work and Success. The stories are accompanied by detailed black and white illustrations of faces, allowing readers to observe the same features that Standop interpreted. The final section of the book outlines the meanings of dozens of facial features and face shapes, so that readers can recognize their own innate intuitive powers and develop

them. Read the Face is a guide to using the ancient art and science of face reading to go beyond the surface and create the boldest life possible.

Every face tells a story, and here's how to read what it says--not merely its expression, but the deeper meanings conveyed by its shapes. These include 23 forms of eyes, 23 conformations of eyebrows, 13 kinds of ears, 13 nose profiles, and nine types of mouth. The art of face reading, like feng shui, comes from China, but despite its Asian origins, applies equally well to all racial types. Well-known author

The scientific story of first impressions—and why the snap character judgments we make from faces are irresistible but usually incorrect We make up our minds about others after seeing their faces for a fraction of a second—and these snap judgments predict all kinds of important decisions. For example, politicians who simply look more competent are more

likely to win elections.

Yet the character judgments we make from faces are as inaccurate as they are irresistible; in most situations, we would guess more accurately if we ignored faces. So why do we put so much stock in these widely shared impressions? What is their purpose if they are completely unreliable? In this book, Alexander Todorov, one of the world's leading researchers on the subject, answers
