

Chemistry Matter Change Study Guide For Content Mastery

Work more effectively and gauge your progress as you go along! This Study Guide is designed to accompany Brady & Senese's Chemistry: Matter & Its Changes, 4th Edition. It contains learning objectives, chapter reviews, examples, and self-test questions. Brady & Senese's Chemistry: Matter & Its Changes, 4th Edition, is a reader-friendly textbook that makes the content accessible without sacrificing either breadth or depth of coverage. The text's informal writing style, emphasis on problem solving, and state-of-the-art media package make this book an ideal fit for readers of various backgrounds and abilities. The 4th edition welcomes new co-author Fred Senese, the architect of the most visited general chemistry website. Together Jim Brady and Fred Senese offer accurate, lucid, and interesting explanations of the basic concepts of chemistry, as well as comprehensive coverage and aid to readers in developing problem solving skills.

An Atoms-Focused Approach

Matter and Its Changes 4th Edition with Student Study Guide and Wiley Plus Set

"TEAS 6 Prep Flashcard Workbook 4: CHEMISTRY REVIEW" 700 questions and answers. Essential definitions, formulas, concepts, and sample problems. Topics: Introduction, Matter, Atoms, Formulas, Moles, Reactions, Elements, Periodic Table, Electrons, Chemical Bonds, Heat, Gases, Phase Changes, Solutions, Reaction Rates, Equilibrium, Acids and Bases, Oxidation and Reduction, Introduction to Organic Chemistry, Radioactivity ===== ADDITIONAL WORKBOOKS: "TEAS V Prep Flashcard Workbook 1: ARITHMETIC REVIEW" 600 questions and answers highlight essential arithmetic definitions, problems, and concepts. Topics: Addition, Subtraction, Multiplication, and Division of Whole Numbers; Fractions and Decimals, Multiplication Tables, Word Problems, Percents, Measurement, Metric System, Square Roots and Powers, Real Numbers, Properties of Numbers _____ "TEAS V Prep Flashcard Workbook 2: ALGEBRA REVIEW" 450 questions and answers that highlight introductory algebra definitions, problems, and concepts. Topics: Algebraic Concepts, Sets, Variables, Exponents, Properties of Numbers, Simple Equations, Signed Numbers, Monomials, Polynomials, Additive and Multiplicative Inverse, Word Problems, Prime Numbers, Factoring, Algebraic Fractions, Ratio and Proportion, Variation, Radicals, Quadratic Equations ===== "Exambusters TEAS V Prep Workbooks" provide comprehensive, fundamental TEAS V review--one fact at a time--to prepare students to take practice TEAS V tests. Each TEAS V study guide focuses on one specific subject area covered on the TEAS V exams. From 300 to 600 questions and answers, each volume in the TEAS V series is a quick and easy, focused read. Reviewing TEAS V flash cards is the first step toward more confident TEAS V preparation and ultimately, higher TEAS V exam scores!

The image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon, as it forms around particles of a metal catalyst. Carbon nanotubes are a recently discovered allotrope of carbon. Three other allotropes of carbon-buckyballs, graphite, and diamond-are illustrated at the left, as is the molecule methane, CH4, from which nanotubes and buckyballs can be made. The element carbon forms an amazing number of compounds with structures that follow from simple methane, found in natural gas, to the complex macromolecules that serve as the basis of life on our planet. The study of chemistry also follows from the simple to the more complex, and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement.

The images on the cover call attention to the relationship between macro observations and the intimate structure of chemical substances and the changes, both chemical and physical, that they undergo. Fireworks: One of the ingredients is phosphorus, a molecular form of which is believed to consist of linked tetrahedra of phosphorus atoms. The chemical reaction of phosphorus with oxygen is partly responsible for the spectacular show of light. Carbon: The element is found in several forms, including the familiar diamond and another, recently discovered, sooty substance that consists of soccer-ball shaped molecules, often referred to as "buckyballs." Diamond is not the most stable form of carbon and is created from other forms of carbon at high temperatures and pressures deep within the earth. Acetylene torch: Cutting steel is possible because of the intense heat generated by the chemical reaction of acetylene with oxygen, a reaction between molecules of C_2H_2 and O_2 to give CO_2 and H_2O. Hot air balloon: The air that helps it rise is heated by the combustion of molecules of propane, each composed of three carbon and eight hydrogen atoms. Stormy weather: The evaporation of water serves to store energy provided by the sun. Subsequent condensation of the water vapor releases this energy and is the basis of all the weather systems on our planet.

Chemistry: Matter & Change, Study Guide For Content Mastery, Student EditionMcGraw-Hill Education

This extensive study guide covers the most important points in every chapter of the text. Clearly formatted and illustrated, it develops concepts and skills in a friendly, relaxed style that forestalls student confusion. The guide contains numerous worked-out examples, key points to keep in mind, and a large number of additional problems (with answers) for self-test purposes.

Study Guide and Reinforcement Worksheets allow for differentiated instruction through a wide range of question formats. There are worksheets and study tools for each section of the text that help teachers track students' progress toward understanding concepts. Guided Reading Activities help students identify and comprehend the important information in each chapter.

The authors, who have more than two decades of combined experience teaching an atoms-first course, have gone beyond reorganizing the topics. They emphasize the particulate nature of matter throughout the book in the text, art, and problems, while placing the chemistry in a biological, environmental, or geological context. The authors use a consistent problem-solving model and provide students with ample opportunities to practice.

Chemistry: The Study of Matter and Its Changes, Sixth Edition will provide the necessary practice, support and individualised instruction that ensures success in the General Chemistry course. This text provides the forum for problem solving and concept mastery of chemical phenomena that leads to proficiency and success in the General Chemistry course. This edition will continue a "molecular basis of chemistry" tradition, but in a manner that overtly and repeatedly reinforces the way properties at the molecular level are related to properties we observe at the macroscopic level. The unique "chemical tools" approach employed in this book provides a way of thinking that helps those students develop the ability to analyse and solve both mathematical and conceptual problems. This text follows the successful three-step approach described as "ANALYSIS," "SOLUTION" and "IS THE ANSWER REASONABLE?" This encourages the student to think about the problem before attempting to solve it, then working through the solution, and finally asking the important question "Does the answer make sense?" There are problem sets called "Bringing It Together" that contain problems which require students to bring together concepts from two or more of the preceding chapters. This reinforces learned concepts and builds concept mastery.

Leads the reader on a delightful and absorbing journey through the ages, on the trail of the elements of the Periodic Table as we know them today. He introduces the young reader to people like Von Helmont, Boyle, Stahl, Priestly, Cavendish, Lavoisier, and many others, all incredibly diverse in personality and approach, who have laid the groundwork for a search that is still unfolding to this day. The first part of Wiker's witty and solidly instructive presentation is most suitable to middle school age, while the later chapters are designed for ages 12-13 and up, with a final chapter somewhat more advanced. Illustrated by Jeanne Bendick and Ted Schluenderfritz.

Barron's Science 360 provides a complete guide to the fundamentals of chemistry. Whether you're a student or just looking to expand your brain power, this book is your go-to resource for everything chemistry. --Back cover.
