A major force in the American automobile scene through the 1950s, Packard made a mark on American advertising as well. The cars themselves seemed built for promotion—the red hexagon in the hubcap, the yoke grille, and the half-arrow belt-line molding acted as a logo of sorts, setting a new standard in visual continuity and branding. The company's image became so firmly established, in fact, that Packard eventually ran advertisements which pictured the cars but purposely omitted the name, instead asking readers to "guess what name it bears." This book traces Packard's advertising history from 1900 through 1958, based on original research that includes several first-hand interviews with the people who made it happen. Filled with reproductions of Packard ads (some in color), the book looks beyond the surface to examine how the advertisements reflect and interpret the company's management and business convictions, how they were influenced by business conditions and competitive pressure, and how they changed with the times.

A More Perfect Constitution presents creative and dynamic proposals from one of the most visionary and fertile political minds of our time to reinvigorate our Constitution and American governance at a time when such change is urgently needed, given the growing dysfunction and unfairness of our political system. Combining idealism and pragmatism, and with full respect for the original document, Larry Sabato's thought-provoking ideas range from the length of the president's term in office and the number and terms of Supreme Court justices to the vagaries of the antiquated Electoral College, and a compelling call for universal national service—all laced through with the history behind each proposal and the potential impact on the lives of ordinary people. Aware that such changes won't happen easily, but that the original Framers fully expected the Constitution to be regularly revised, Sabato urges us to engage in the debate and discussion his ideas will surely engender. During a presidential election year, no book is more relevant or significant than this.

In this revolutionary book, a renowned computer scientist explains the importance of teaching children the basics of computing and how it can prepare them to succeed in the ever-evolving tech world. Computers have completely changed the way we teach children. We have Mindstorms to thank for that. In this book, pioneering computer scientist Seymour Papert uses the invention of LOGO, the first child-friendly programming language, to make the case for the value of teaching children with computers. Papert argues that children are more than capable of mastering computers, and that teaching computational processes like de-bugging in the classroom can change the way we learn everything else. He also shows that schools saturated with technology can actually improve socialization and interaction among students and between students and teachers. Technology changes every day, but the basic ways that computers can help us learn remain. For thousands of teachers and parents who have sought creative ways to help children learn with computers, Mindstorms is their bible.
