The past five decades have witnessed often fierce international rivalry in space, but also surprising military restraint. Now, with an increasing number of countries capable of harming U.S. space assets, experts and officials have renewed a long-standing debate over the best route to space security. Some argue that space defenses will

be needed to protect critical military and civilian satellites. Others argue that space should be a "sanctuary" from deployed weapons and military conflict, particularly given the worsening threat posed by orbital space debris. Moltz puts this debate into historical context by explaining the main trends in military space developments since Sputnik, their underlying causes, and the factors that are likely to influence their future course. This new edition provides analysis of the Obama administration's space policy and the rise of

new actors, including China, India, and Iran. His conclusion offers a unique perspective on the mutual risks militaries face in space and the need for all countries to commit to interdependent, environmentally focused space security.

This report analyzes international and domestic factors that will affect China's approach to nuclear deterrence, how those drivers may evolve over the next 15 years, and what impact they are likely to have.

Three years before the September 11 bombing of the World Trade Center—a Chinese military manual called *Unrestricted Warfare* touted such an attack—suggesting it would be difficult for the U.S. military to cope with. The events of September 11 were not a random act perpetrated by independent agents. The doctrine of total war outlined in *Unrestricted Warfare* clearly demonstrates that the People's Republic of China is preparing to confront the United

States and our allies by conducting "asymmetrical" or multidimensional attack on almost every aspect of our social, economic and political life. Since China destroyed one of its own satellites in January 2007 with a kinetic kill missile, there has been concerns about how much threat the present development of the Chinese space program represents for the United States. To answer this question, this paper makes an analysis of the history and present capabilities of the People's Republic of China, compares the Chinese space program with the US, and evaluates the specific threat of the Chinese antiballistic missile systems. The Chinese space

program will then be put in perspective by comparing it to NASA, and the Chinese future space plans are appraised. Finally, the declared position of China is considered and its collaboration with international partners is discussed.

The author concludes that the Chinese threat has been exaggerated and recommends cooperation between the US and China.

In the event of a Sino-U.S. war, intense conventional counterforce attacks could inflict heavy losses and costs on both sides, so leaders need options to contain and terminate fighting. As it takes steps to reduce the likelihood of war with China, the United States must

How did China undergo its meteoric rise from a technological backwater into a military superpower in outer space? This amazing transition began in top secret US Air Force programs over 75 years ago! While living in America, a brilliant Chinese scientist is chosen to work on the US military's most classified technologies for over a decade. Suddenly, he is outlandishly targeted by the FBI, traded in a prisoner exchange by President Eisenhower and must return to China. This episode ultimately led to China's development of a military-

By 2030, China's economy will outgrow the US, and China plans to use its vast economic resources to project its presence deep into space in ways that will lead to increasing military confrontations with the newly created US Space Force. In this book, you will learn about: - The origins of China's SSP through the pioneering work of Dr. Tsien Hsue-shen who brought his advanced knowledge of SSPs in Nazi Germany and the US to China;- How ancient aviation technologies buried in China's

This "compellingly hard-hitting" bestseller from a Pulitzer Prize finalist gives readers the complete untold story of the top-secret military base for the first time (New York Times). the U.S. government — but Area 51 has captivated imaginations for decades. Myths and hypotheses about Area 51 have long abounded, thanks to the intense secrecy enveloping it. Some claim it is home to aliens, underground tunnel systems, and nuclear facilities. Others believe that the lunar landing itself was filmed there. The prevalence of these rumors stems from the fact that no credible insider has ever divulged the truth about his time inside the base. Until now. Annie Jacobsen had exclusive access to nineteen men who served the base proudly and secretly for decades and are now aged 75-92, and unprecedented access to fifty-five additional

In Area 51, Jacobsen shows us what has really gone on in the Nevada desert, from testing nuclear weapons to building super-secret, supersonic jets to pursuing the War on Terror. This is the first book based on interviews with eye witnesses to Area 51 history, which makes it the seminal work on the subject. Filled with formerly classified information that has never been accurately decoded for the public, Area 51 weaves the mysterious activities of the top-secret base into a gripping narrative, showing that facts are

The Communist Party of China deceived the West into believing that the its system and the Party-ruled People's Liberation Army were peaceful and posed no threat. Weapons deployed in space. China and Russia (and Iran and North Korea) spark news stories by carrying out bold acts of aggression and violating international laws and norms. Isn't this just bad actors acting badly? That kind of thinking is outdated and dangerous. Emboldened by their successes, these countries are, in fact, waging a brazen, global war on the US and the West. This is a new Cold War, which will not be won by those who fail to realize they are fighting it. The enemies of the West understand that while they are unlikely to win a shooting war,

they have another path to victory. And what we see as our greatest strengths—open societies, military innovation, dominance of technology on Earth and in space, longstanding leadership in global institutions—these countries are undermining or turning into weaknesses. Space weapons have been debated intensely in the past. The latest instance of prominent debate is over their use for ballistic missile defense. But this is not the only possible role for space weapons, and that fact raises a further concern: What if an adversary were to develop such weapons? Could one? Why would it? It is time for broader public discussion of the issues. Before deciding to acquire or forgo space weapons for terrestrial conflict, the United States should fully discuss what

such weapons can do, what they will cost, and the likely consequences of acquiring them. The authors of this report seek to aid this discussion not by arguing for or against space weapons but by describing their attributes, classifying and comparing them, and explaining how each might be used. The authors also explore how a nation might decide to acquire such weapons and how other nations might react.

After charting how China's long game has evolved, Doshi offers a comprehensive yet asymmetric plan for an effective US response.

This book challenges this inherent bias by explicitly focusing on those who resist normative change - norm 'antipreneurs'. The utility of the norm antipreneur concept is explored through a series of case studies encompassing a range of issue areas and contributed by a mix of well-known and emergent scholars of norm dynamics. In examining the complexity of norm

long-time classic in the field of space law has been substantially rewritten to reflect new developments in space law and technology of the past ten years. This updated text includes new or expanded material on the proliferation of non-state and commercial entities as space actors, the appearance of innovations in space technology, the evolving international law of satellite telecommunications in a networked world, and the adoption of national laws and international soft law mechanisms that complement the international treaty regime. In this up-to-date overview of space law, the authors offer a clear analysis of the legal challenges that play a role in new and traditional areas of space activity, including the following: - the peaceful uses of outer space; -

reasons rooted in both historical and contemporary contexts, China faces many difficulties and setbacks in this quest. China's Arms Acquisitions from Abroad documents and analyses the 150-year effort by China to strengthen its military forces through arms imports. Based on an historical understanding of this process, the report focuses mainly on contemporary transfers of weapons and technologies to China, particularly those from the Soviet Union and Russia, but also including imports from Israel, France, the United Kingdom, the United States and other suppliers. Relying on primary sources as well as on the most comprehensive collection of open-
