how did they

Chinese Foreign Direct Investments - Scopes, Forms and Motives An Economic Perspective

Since China has now

largest energy
consumer, its energy
sector has

understandably huge

implications for the global economy. This book examines the transformation of China's conventional and renewable energy sectors, with special attention to state-business relations. Two studies examine the development of China's energy profile, especially China's renewable energy. Two

others explore
governmental relations
with state-owned

enterprises (SOEs) and

their reform. Despite

drastic restructuring in

the late 1990s, SOEs

continue their

oligopolistic control of

the oil and gas sectors

and even overshadow

the stock market. Three

studies investigate the

factors that help propel

Acces PDF Chinas Overseas

Investments In Oil

the expansion of
China's conventional
energy firms, as well as

those producing
renewable energy (i.e.

solar PV industry). A
study of China's solar

PV industry suggests
that China's

governmental support
for it has evolved from
subsidising production

(a "mercantile" stage
aimed at expanding the

Acces PDF Chinas Overseas

Investments In Oil

And Gas

industry's global production and export share) to subsidising the demand side (aiming at expanding domestic demand and absorbing redundant manufacture capacity). Another review of this industry finds that firms tend to pay heavy attention to extra-firm institutional network relationships both inside and outside

China, and that buyer-supplier networks are influenced by extra-

local managerial education. The final chapter compares

China's provinces and their embedded carbon-footprints per capita in urban areas from a consumption

perspective, using a self-organizing feature map (SOFM) model. This

book was originally published as a special issue of the Asia Pacific Business Review.

This book illustrates the current state of China's economic and trade relations from the perspective from different countries in the Xi Jinping era. The content is divided into five parts, the first of which traces the

development of the
Chinese economy
starting with the reforms
of the 1980s. The
second part notes some
distinctive elements of
China's positioning in
the global economy,
while the third describes
the state of relations
between the United
States and China under
the Trump presidency.
The fourth part focuses

Acces PDF Chinas Overseas

Investments In Oil

And Gas

Production

on diplomatic and economic equilibria in East Asia, Central and Southern Asia, the Middle East, Africa and Latin America. In turn, the last part addresses relations between China and various European countries. Given its scope, the book is a must-read for economists, policymakers and

Oil politics in the twentieth century was about the management of abundance, state power, and market growth. The legacy of this age of plenty

includes declining conventional oil reserves, volatile prices, climate change, and enduring poverty in many oil-rich countries. The politics of oil are now at a turning point, and oil's future will not be like its past. In this in-depth

for fossil fuel

violent political
struggles in producer-

demand and the growth of dirty oil, decarbonize energy systems, and improve governance in oil-producing countries.

China's two decades of rapid economic growth have fueled a demand for energy that has outstripped

Acces PDF Chinas Overseas

Investments In Oil And Gas Production

domestic sources of supply. China became a net oil importer in 1993, and the country's dependence on energy imports is expected to continue to grow over the next 20 years, when it is likely to import some 60 percent of its oil

Investments In Oil

And Gas

Production

and at least 30 percent of its natural gas. China thus is having to abandon its traditional goal of energyself-sufficiency--brought about by a fear of strategic vulnerability--and look abroad for resources. This study

Acces PDF Chinas Overseas

Investments In Oil

looks at the measures
that China is taking
to achieve energy
security and the
motivations behind
those measures. It
considers China's
investment in
overseas oil
exploration and
development
projects, interest in

transnational oil pipelines, plans for a strategic petroleum reserve, expansion of refineries to process crude supplies from the Middle East, development of the natural gas industry, and gradual opening of onshore drilling areas to foreign oil

companies. The author concludes that these activities are designed, in part, to reduce the vulnerability of China's energy supply to U.S. power. China's international oil and gas investments, however, are

Acces PDF Chinas Overseas

Investments In Oil
And Gas
Production
unlikely to bring
China the energy
security it desires.

China is likely to
remain reliant on
U.S. protection of
the sea-lanes that
bring the country
most of its energy
imports.

This book explores
the characteristics of

Acces PDF Chinas Overseas

Investments In Oil And Gas Production

China's outward foreign investment, its motivation, its sector distribution, and its geographical distribution to illustrate the current pattern of 'merchant-state dualism' in China's overseas foreign direct investment. It thus

concludes that
merchant-state
dualism is the most
suitable model for
explaining
contemporary
Chinese government-
business relations.

Moreover, trade
continues to play a
major role in China's

imports for US\$ 561
billion which makes
China the third-largest

worldwide.² China's
trade boom is largely

due to the inflow of foreign direct investment (FDI). Most people know that China is a magnet for FDI and that it attracts more than any other country. In 2003 mainland China surpassed the United States as the largest FDI recipient. One year later the FDI inflow reached US\$ 61 billion³ resulting in a cumulative

level of FDI of US\$ 563 billion⁴ at the end of

2004. Looking at these figures and at the "China fever" of managers from all over the world it is not very astonishing that for the last five years at least the big story has been about China's FDI inflows. But there is another story as well. It is hardly mentioned in the press but it is

becoming more and more important: the increase of Chinese FDI outflows. For this reason the essay on hand shows, based on a general definition of FDI, the scope of China's FDI outflows through current data and categorizes the different forms of FDI.

Furthermore, the motives of Chinese

companies investing abroad as well as the governmental actions supporting the going global movement are analysed. Then Chinese FDIs are examined in great detail at the example of Germany. Finally, problems of the development are discussed and the essay concludes with an outlook about China's
