PROJECT GBA&C recognizes and celebrates the accomplishments of world's renowned artists who have made, and are making, significant contributions in the field of art, producing powerful imagery that continues to captivate, educate, inspire and heal humanity. Engaging art with books " ART EXHIBIT " is one such initiative showcasing the best moments captured by artists across the globe, encapsulating the sheer joy of subtle self-expression behind every art. Editors Panel - PROJECT GBA&C

The historical assessments of Left unity in 1930s India misrepresent activities designed to achieve unity. The common treatment of the relationship between Indian socialists and communists emphasizes disunity and the inability to find common ground. Scholarly discussions about unity in fact highlight its impracticality and the inevitability of its failure. This book proposes that during this moment, for socialists and communists, unity was not just an ideal, but was in fact considered to be a possible and very realizable goal. Rather than focusing exclusively on ideological fissures as the literature does, the book explores the possibilities for unity. The author investigates the United Front as a conceptual framework for collaboration, as a scheme for assessing the extent to which cooperation between socialists and communists was feasible and practicable during the mid-to-late-1930s in India. He employs the notion of United Front as an instrument for identifying and compensating for the prejudices

which permeate sources about the cooperation between the Congress Socialist Party (CSP) and the Communist Party of India (CPI). The author challenges the historicism found in extant scholarly assessments of Left unity by illustrating the ways in which the partners engaged in united front activities and approached the common goal of Left unity despite their fragmented ideological perspectives. The book presents the United Front not as an unsuccessful phase of collaboration, but rather as a concerted attempt to achieve ideological convergence and Left homogeneity which ultimately failed to radicalize Indian nationalism because, in reality, conditions for Left unity did not exist. The book will be of interest to academics studying South Asian history and politics in particular, and socialism, communism, nationalism and imperialism more generally.

Early anthropological evidence for plant use as medicine is 60,000 years old as reported from the Neanderthal grave in Iraq. The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East. Today, around 1.4 billion people in South Asia alone have no access to modern health care, and rely instead on traditional medicine to alleviate various symptoms. On a global basis, approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life-threatening conditions that include diabetes, hypertension and cancers. As the demand for plant-based medicine rises, there is an unmet need to investigate the quality, safety and efficacy of these herbals by the “scientific methods”. Current research on drug

discovery from medicinal plants involves a multifaceted approach combining botanical, phytochemical, analytical, and molecular techniques. For instance, high throughput robotic screens have been developed by industry; it is now possible to carry out 50,000 tests per day in the search for compounds, which act on a key enzyme or a subset of receptors. This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high-throughput bioassays, and the scaling-up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant-based therapeutics. The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, it focuess on the secondary metabolic compounds, which afford protection against diseases. Lastly, Volume 3 discusses the physiological mechanisms by which the

active ingredients of medicinal plants serve to improve human health. Together this three-volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners, and students and researchers in botany and horticulture.

This book is going to fill up the missing part of our education system. According to UNESCO, there are four pillars to an effective education system. Learn to know, learn to do, learn to be and learn to be with others. Our existing education system is catering to the first one and off late started addressing the second one. But the third and the fourth pillar related to being with self and others are still untouched. This book is an attempt to do that. It will transform your being with its 24 chapters and its Transformative questions at the end of each chapter. The relevance of this book increases further as India, under the able leadership of its PM, has started thinking about Transformation and Success. This book can turn out to be a game changer for the citizens and the Government of any developing country who wants

to convert their country into a developed one and that too at a rapid pace.

The book 'UNO's Contributions' is the Final Ph. D. Thesis of Jamir Ahmed Choudhury on verifiable framework of natural science and justifiable curriculum of human rights and universal education on the basis of eye opening evidence bearing Academic Ph. D. Registration No. 2491/14 under Assam University, India.

Process metallurgy provides academics with the fundamentals of the manufacturing of metallic materials, from raw materials into finished parts or products. Coverage is divided into three volumes, entitled Process Fundamentals, encompassing process fundamentals, extractive and refining processes, and metallurgical process phenomena; Processing Phenomena, encompassing ferrous processing; non-ferrous processing; and refractory, reactive and aqueous processing of metals; and Industrial Processes, encompassing process modeling and computational tools, energy optimization, environmental aspects and industrial design. The work distils 400+ years combined academic experience from the principal editor and multidisciplinary 14-member editorial advisory board, providing the 2,608-page work with a seal of quality. The volumes will function as the process counterpart to Robert Cahn and Peter Haasen's

famous reference family, Physical Metallurgy (1996)--which excluded process metallurgy from consideration and which is currently undergoing a major revision under the editorship of David Laughlin and Kazuhiro Hono (publishing 2014). Nevertheless, process and extractive metallurgy are fields within their own right, and this work will be of interest to libraries supporting courses in the process area. Synthesizes the most pertinent contemporary developments within process metallurgy so scientists have authoritative information at their fingertips Replaces existing articles and monographs with a single complete solution, saving time for busy scientists Helps metallurgists to predict changes and consequences and create or modify whatever process is deployed Earth reinforcing techniques are increasingly becoming a useful, powerful and economical solution to various problems encountered in geotechnical engineering practice. Expansion of the experiences and knowledge in this area has succeeded in developing new techniques and their applications to geotechnical engineering problems. In order to discuss the latest experiences and knowledge, and with the purpose of spreading them all over the world for further development, the IS Kyushi conference series on the subject of earth reinforcement have been held in Fukuoka, Japan, every four years since 1988. This fourth

symposium, entitled Landmarks in Earth Reinforcement, is a continuation of the series IS Kyushu conferences, and also aims at being one of the landmarks in the progress of modern earth reinforcement practice. The first volume contains 137 papers selected for the symposium covering almost every aspect of earth reinforcement. The second volume contains texts of the special and keynote lectures.

Organic And Bio-Molecular Chemistry is the component of Encyclopedia of Chemical Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The Theme on Organic And Bio-Molecular Chemistry in the Encyclopedia of Chemical Sciences, Engineering and Technology Resources deal with the discipline that studies the molecules of life, which are made by carbon atoms, and includes also all the synthetic compounds the skeletons of which contain carbon atoms. The first chapter describes in general terms, for not expert readers, what Organic and Bio-molecular chemistry is, the nature and behavior of organic compounds in living organisms, the importance of organic compounds in the market and in our every day life. The subsequent chapters are organized in order to provide the reader with information on the structure, reactivity, analysis and different applications of Organic Compounds. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

Colour and appearance perceptions are very complex psychological phenomena. Written by one of the foremost authorities in the field, Principles of Colour and Appearance Measurement is a major two-volume work addressing the key

Read Free Choudhary Vol 1 Hajra Technology By Workshop

topics required to understand the issues and manage colour effectively. The book addresses how objects appear to viewers, how viewers perceive colour, and the major types of instrumentation used to measure colour. Chapters detail the characteristics of light sources and object colour and appearance attributes. They encompass the complexities of human visual perception, including the various causes and types of colour blindness, and other unusual visual phenomena. The book also covers colour measurement instruments and methods, as well as fluorescence and whiteness. Principles of Colour Appearance and Measurement is a comprehensive resource for designers, colour technologists, colour quality inspectors, product developers, and anyone who uses colour in their work. Addresses the key topics required to understand the issues of colour measure and management Examines how viewers perceive colour and how objects appear to them Reviews the major types of instrumentation used to measure colour

CONCEPTS AND DESIGN

With a high diversity of vegetation in Iran, over 8000 plant species are in existence. More than 2300 species of these plants have medicinal, edible and industrial properties, and more than 1700

Read Free Choudhary Vol 1 Hajra Technology By Workshop

species of them are endemic. Natural Products and Botanical Medicines of Iran provides an overview on important endemic plants and their usages. All results have been tabulated and key detailed information of each species is presented with background data. Features: Provides an understanding of indigenous plant-derived natural medicines of the most important medicinal plants in the region Includes discussions and critical views on the potentials and challenges for further development of the selected plants in a modern setting Details the important plants and sets out the chapters based on either taxonomy or medical use

Lead Molecules from Natural Products: Discovery and New Trends provides the reader with a thorough overview of current discoveries and trends in Natural Products research. This book consists of 22 chapters from well known scientists all over the world, with topics ranging from Natural Product Chemistry and Phytochemistry in their most basic form, to Molecular Biology and in silico drug design. Contributors describe their own laboratory experiences, revealing their findings, the legal issues encountered. The chapters, all of equally high quality, summarize years of extensive research in

Read Free Choudhary Vol 1 Hajra Technology By Workshop

each area, and provide insight in the new themes of natural product research. The information will help to predict promising leads, useful for physicians in the treatment of different diseases and disease manifestations. * Explains the effects of plant extracts on gene expression profiling. * Details medicinal plant research from around the world * Explores a variety of medicinal uses of plants from traditional remedies, to anti-cancer agents and anti-salmonella agents. This book showcases cutting-edge research papers from the 5th International Conference on Research into Design - the largest in India in this area - written by eminent researchers from across the world on design process, technologies, methods and tools, and their impact on innovation, for supporting design across boundaries. The special features of the book are the variety of insights into the product and system innovation process, and the host of methods and tools from all major areas of design research for the enhancement of the innovation process. The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area, with the largest collection of research from India. For practitioners and educators, it

Chemistry, Volume 1 covers leading-edge research and recent developments in rational drug design, synthetic chemistry, bioorganic chemistry, high-throughput screening, combinatorial chemistry, drug targets, and natural product research and structure-activity relationship studies. The fourteen updated reviews include unique experimental data and references, and each article highlights an important topic in current medicinal chemistry research. Topics covered include: aureolic acid group of anti-cancer antibiotics and non-steroidal anti-inflammatory drugs; aromatase inhibitors in adjuvant endocrine treatment of early-stage breast cancer in postmenopausal women; Rho GTPases and statins in targeting and developing therapies for tumors; and more. Edited and written by leading experts in medicinal chemistry research Reviews recent advances in the field, including the characterization of inorganic nanomaterials as therapeutic vehicles Covers a variety of topical areas, such as HPLC and in the analysis of tricyclic antidepressants in biological samples, and tannins and their influence on health Medicinal Plants in the Asia Pacific for Zoonotic Pandemics provides an unprecedented, comprehensive overview of the phylogeny, botany, ethnopharmacology, and pharmacology of more than 100 plants used in the traditional medical systems of Asia and Pacific. It discusses their actions and potentials against viruses, bacteria, and fungi that

represent a threat of epidemic and pandemic diseases, with an emphasis on the molecular basis and cellular pathways. This book presents scientific names, the botanical classification, traditional medicinal uses, active chemical constituents, and pharmacology. This volume is a critical reference for anyone involved in the discovery of lead molecules or phytopharmaceutical products for the prevention or treatment of pandemic viral, bacterial, or fungal infections. FEATURES Phylogenetic presentation of medicinal plants and a chemotaxonomical rationale of antiviral, antibacterial, and antifungal actions Discusses the chemical structure – activity relationship, pharmacokinetics, and oral bioavailability of antimicrobial principles Introduces the molecular mechanism of natural products on viruses, bacteria, and fungi Contains a selection of botanical plates and useful bibliographic references This book is a useful research tool for postgraduates, academics, and the pharmaceutical, herbal, and nutrition industries. Medicinal Plants in the Asia Pacific for Zoonotic Pandemics includes commentary sections that invite further research and reflection on the fascinating and timely subject of the development of drugs and herbals from Asia-Pacific medicinal plants to safeguard humanity and other life forms against the forthcoming waves of viral, bacterial, or fungal pandemics. This book is an ideal reference text for medicinal plant enthusiasts.

This book gathers the proceedings of the Sixth International Conference on Computational Science and Technology 2019 (ICCST2019), held in Kota Kinabalu, Malaysia, on 29 – 30 August 2019. The respective contributions offer practitioners and researchers a range of new computational techniques and solutions, identify emerging issues, and outline future research directions, while also showing them how to apply the latest large-scale, high-performance computational methods.

Applications of nuclear magnetic resonance span a wide range of scientific disciplines, from physics to medicine. This series has provided an essential digest of the NMR literature for more than four decades and each volume provides unrivalled coverage of the literature on this topic. Continuous coverage on some topics such as theoretical and physical aspects of nuclear shielding is balance by the desire for coverage on newer topics like applications in biological systems and materials science. For those wanting to become rapidly acquainted with NMR or seasoned practitioners, this is an invaluable source of current methods and applications.

The highly praised book in communications networking from IEEE

Advances in Biofeedstocks and Biofuels PRODUCTION TECHNOLOGIES FOR SOLIDS AND GASEOUS

BIOFUELS This latest volume in the series, "Advances in Biofeedstocks and Biofuels," offers the most up-to-date and comprehensive coverage available for the production technologies for solid and gaseous biofuels. Biofuel production is one of the most extensively studied recent fields of innovation that can provide the world an alternative energy source. Biomass-based fuel

Read Free Choudhary Vol 1 Hajra Technology By Workshop

production, or renewable fuels, are becoming increasingly important as a remedy for the increasing greenhouse effect, depleting oil reserves, and rising oil prices. Therefore, research on the production of various biofuels is gaining very much importance among scientists and researchers all over the globe. The book, *Production Technologies for Solid and Gaseous Biofuels*, is the fourth volume of the book series entitled "Advances in Biofeedstocks and Biofuels." The first volume, *Biofeedstocks and Their Processing*, covered the aspects of biofeedstocks and their suitability as an alternative energy source. The second volume, *Production Technologies for Biofuels*, covered all the latest technologies in biofuels production. The third volume, *Liquid Biofuel Production*, focused on the latest technologies involved in the production of liquid biofuels, such as bioethanol, biodiesel, biobutanol, and others. This fourth volume, *Production Technologies for Solid and Gaseous Biofuels*, covers all of the latest technologies in the field of solid biofuels, like biochar, briquettes from biomass, as well as gaseous biofuels like biogas, biohydrogen, and more. Various aspects of utilization of waste biomass for the production of solid and gaseous biofuels are also discussed. This book presents the state of the art in solid and gaseous biofuel production, a must have for any engineer or scientist working in this field.

Genomic Applications for Crop Breeding: Biotic Stress is the first of two volumes looking at the latest advances in genomic applications to crop breeding. This volume focuses on genomic-assisted advances for improving economically important crops against biotic stressors, such as viruses, fungi, nematodes, and bacteria. Looking at key advances in crops such as rice, barley, wheat, and

Read Free Choudhary Vol 1 Hajra Technology By Workshop

potato amongst others, Genomic Applications for Crop Breeding: Biotic Stress will be an essential reference for crop scientists, geneticists, breeders, industry personnel and advanced students in the field.

Advanced Computing, Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing/overlap among them. However, their convergence is observed in many real world applications, including cyber-security, internet banking, healthcare, sensor networks, cognitive radio, pervasive computing amidst many others. This two-volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security, signal and image processing, ontology and human-computer interfaces (HCI). The two volumes together include 148 scholarly papers, which have been accepted for presentation from over 640 submissions in the second International Conference on Advanced Computing, Networking and Informatics, 2014, held in Kolkata, India during June 24-26, 2014. The first volume includes innovative computing techniques and relevant research results in informatics with selective applications in pattern recognition, signal/image processing and HCI. The second volume on the other hand demonstrates the possible scope of the computing techniques and informatics in wireless communications, networking and security.

James McHugh offers the first comprehensive examination of the concepts and practices related to smell in pre-modern India. Drawing on a wide range of textual sources, from poetry to medical texts, he shows the deeply significant religious and cultural role of smell in India throughout the first millennium CE. McHugh

Read Free Choudhary Vol 1 Hajra Technology By Workshop

describes sophisticated arts of perfumery, developed in temples, monasteries, and courts, which resulted in worldwide ocean trade. He shows that various religious discourses on the purpose of life emphasized the pleasures of the senses, including olfactory experience, as a valid end in themselves. Fragrances and stench were analogous to certain values, aesthetic or ethical, and in a system where karmic results often had a sensory impact-where evil literally stank-the ethical and aesthetic became difficult to distinguish. Sandalwood and Carrion explores smell in pre-modern India from many perspectives, covering such topics as philosophical accounts of smell perception, odors in literature, the history of perfumery in India, the significance of sandalwood in Buddhism, and the divine offering of perfume to the gods.
