They are meant to enhance and bring variety to an already-existing school English language teaching program. The worksheets are designed to be duplicated and distributed to students. The worksheets can be used at home, school, or in any other independent setting. They can also be used to make overhead transparencies or be projected onto a whiteboard or smart board on which students can see the worksheet and write directly onto the projected image. The lessons can also provide a useful resource for substitute teachers and tutors.

"Advanced Statistics in Research: Reading, Understanding, and Writing Up Data Analysis Results" is the simple, nontechnical introduction to the most complex multivariate statistics presented in empirical research articles. "wwwStatsInResearch.com," is a companion website that provides free sample chapters, exercises, and PowerPoint slides for students and teachers. A free 600-item test bank is available to instructors. "Advanced Statistics in Research" does not show how to "perform" statistical procedures--it shows how to read, understand, and interpret them, as they are typically presented in journal articles and research reports. It demystifies the sophisticated statistics that stop most readers cold: multiple regression, logistic regression, discriminant analysis, ANOVA, ANCOVA, MANOVA, factor analysis, path analysis, structural equation modeling, meta-analysis--and more. "Advanced Statistics in Research" assumes that you have never had a course in statistics. It begins at the beginning, with research design, central tendency, variability, z scores, and the normal curve. You will learn (or re-learn) the big-three results that are common to most procedures: statistical significance, confidence intervals, and effect size. Step-by-step, each chapter gently builds on earlier concepts. Matrix algebra is avoided, and complex topics are explained using simple, easy-to-understand examples. "Need help writing up your results?" Advanced Statistics in Research shows how data-analysis results can be summarized in text, tables, and figures according to APA format. You will see how to present the basics (e.g., means and standard deviations) as well as the advanced (e.g., factor patterns, post-hoc tests, path models, and more). "Advanced Statistics in Research" is appropriate as a textbook for graduate students and upper-level undergraduates (see supplementary materials at StatsInResearch.com). It also serves as a handy shelf reference for investigators and all consumers of research.

On Purpose, Selling Your Company With Intention And Purpose! was written as a guide for the small business owner to understand the steps involved in the process of selling a company for maximum value. Most business owners will only sell a company once or twice in a lifetime making them inexperienced at best. Hiring a business broker is one of the last steps you'll take in selling your company. I wrote this book so you can better understand the steps you need to take to begin the process of selling a company and maximize the value for all parties.
