

Civilization A New History Of The Western World

Michel Foucault examines the archeology of madness in the West from 1500 to 1800 - from the late Middle Ages, when insanity was still considered part of everyday life and fools and lunatics walked the streets freely, to the time when such people began to be considered a threat, asylums were first built, and walls were erected between the "insane" and the rest of humanity.

A comprehensive account of how energy has shaped society throughout history, from pre-agricultural foraging societies through today's fossil fuel-driven civilization. "I wait for new Smil books the way some people wait for the next 'Star Wars' movie. In his latest book, *Energy and Civilization: A History*, he goes deep and broad to explain how innovations in humans' ability to turn energy into heat, light, and motion have been a driving force behind our cultural and economic progress over the past 10,000 years. —Bill Gates, *Gates Notes*, Best Books of the Year

Energy is the only universal currency; it is necessary for getting anything done. The conversion of energy on Earth ranges from terra-forming forces of plate tectonics to cumulative erosive effects of raindrops. Life on Earth depends on the photosynthetic conversion of solar energy into plant biomass. Humans have come to rely on many more energy flows—ranging from fossil fuels to photovoltaic generation of electricity—for their civilized existence. In this monumental history, Vaclav Smil provides a comprehensive account of how energy has shaped society, from pre-agricultural foraging societies through today's fossil fuel-driven civilization. Humans are the only species that can systematically harness energies outside their bodies, using the power of their intellect and an enormous variety of artifacts—from the simplest tools to internal combustion engines and nuclear reactors. The epochal transition to fossil fuels affected everything: agriculture, industry, transportation, weapons, communication, economics, urbanization, quality of life, politics, and the environment. Smil describes humanity's energy eras in panoramic and interdisciplinary fashion, offering readers a magisterial overview. This book is an extensively updated and expanded version of Smil's *Energy in World History* (1994). Smil has incorporated an enormous amount of new material, reflecting the dramatic developments in energy studies over the last two decades and his own research over that time.

The Activity Book provides a complete review of everything read in *The Story of Civilization: The History of the United States*, along with creative activities to accompany each chapter, including: - Reading comprehension questions - Narration Exercises - Map Activities -

Coloring Pages - Crossword Puzzles and Word Searches - Craft Projects unique to each chapter - Fun Snack Ideas and Recipes - Science Projects that illustrate the lessons learned in the chapters These books provide a complete and creative overview to teacher and student alike, reaffirming the content found in The Story of Civilization.

This book examines the social, economic and political issues of public health provision in historical perspective. It outlines the development of public health in Britain, Continental Europe and the United States from the ancient world through to the modern state. It includes discussion of: * pestilence, public order and morality in pre-modern times * the Enlightenment and its effects * centralization in Victorian Britain * localization of health care in the United States * population issues and family welfare * the rise of the classic welfare state * attitudes towards public health into the twenty-first century.

Western Civilization, A Brief History
A Handbook

Madness and Civilization

Volume II: Since 1600

The Dawn of Everything

The New History of Korean Civilization

Perhaps the French philosopher's masterpiece, which is concerned with an extraordinary question: What does it mean to be mad?

"A lively popular history of an oft-overlooked element in the development of human society" (Library Journal)—walls—and a haunting and eye-opening saga that reveals a startling link between what we build and how we live. With esteemed historian David Frye as our raconteur-guide in Walls, which Publishers Weekly praises as "informative, relevant, and thought-provoking," we journey back to a time before barriers of brick and stone even existed—to an era in which nomadic tribes vied for scarce resources, and each man was bred to a life of struggle. Ultimately, those same men would create edifices of mud, brick, and stone, and with them effectively divide humanity: on one side were those the walls protected; on the other, those the walls kept out. The stars of this narrative are the walls themselves—rising up in places as ancient and exotic as Mesopotamia, Babylon, Greece, China, Rome, Mongolia, Afghanistan, the lower Mississippi, and even Central America. As we journey across time and place, we discover a hidden, thousand-mile-long wall in Asia's steppes; learn of bizarre Spartan rituals; watch Mongol chieftains lead their miles-long hordes; witness the epic siege of Constantinople; chill at the fate of French explorers; marvel at the folly of the Maginot Line; tense at the gathering crisis in Cold War Berlin; gape at Hollywood's gated royalty; and contemplate the wall mania of our own era. Hailed by Kirkus Reviews as "provocative, well-written, and—with walls rising everywhere on the planet—timely," Walls gradually reveals the startling ways that barriers have

affected our psyches. The questions this book summons are both intriguing and profound: Did walls make civilization possible? And can we live without them? Find out in this masterpiece of historical recovery and preeminent storytelling. Chronologically traces the course of human history and civilization from prehistoric times to the present day, covering key events, people, inventions and discoveries, and ideas and beliefs.

The perfect St. Patrick's Day gift, and a book in the best tradition of popular history -- the untold story of Ireland's role in maintaining Western culture while the Dark Ages settled on Europe. Every year millions of Americans celebrate St. Patrick's Day, but they may not be aware of how great an influence St. Patrick was on the subsequent history of civilization. Not only did he bring Christianity to Ireland, he instilled a sense of literacy and learning that would create the conditions that allowed Ireland to become "the isle of saints and scholars" -- and thus preserve Western culture while Europe was being overrun by barbarians. In this entertaining and compelling narrative, Thomas Cahill tells the story of how Europe evolved from the classical age of Rome to the medieval era. Without Ireland, the transition could not have taken place. Not only did Irish monks and scribes maintain the very record of Western civilization -- copying manuscripts of Greek and Latin writers, both pagan and Christian, while libraries and learning on the continent were forever lost -- they brought their uniquely Irish world-view to the task. As Cahill delightfully illustrates, so much of the liveliness we associate with medieval culture has its roots in Ireland. When the seeds of culture were replanted on the European continent, it was from Ireland that they were germinated. In the tradition of Barbara Tuchman's A Distant Mirror, How The Irish Saved Civilization reconstructs an era that few know about but which is central to understanding our past and our cultural heritage. But it conveys its knowledge with a winking wit that aptly captures the sensibility of the unsung Irish who relaunched civilization. BONUS MATERIAL: This ebook edition includes an excerpt from Thomas Cahill's Heretics and Heroes.

A History of Civilization in Blood and Brick

Making of the Modern World Text Book

A Brief History of Western Civilization

The Essential Guide to Western Civilization

Civilization and Social Process

A History

The Story of Civilization reflects a new emphasis in presenting the history of the world as a thrilling and compelling narrative. Within each chapter, children will encounter short stories that place them directly in the shoes of historical figures, both famous and ordinary, as they live through legendary battles and invasions, philosophical debates, the construction of architectural wonders, the discovery of new inventions and sciences, and the exploration of the world.

This is a widely read classic exposition of the history of Africans on the continent, the people of African descent in the United States and

in the diaspora. This is well researched scholarly work detailing the development of civilisation in Africa and its destruction
The life and career of the legendary developer celebrated as the "godfather of computer gaming" and creator of Civilization, featuring his rules of good game design. "Sid Meier is a foundation of what gaming is for me today." – Phil Spencer, head of Xbox
Over his four-decade career, Sid Meier has produced some of the world's most popular video games, including Sid Meier's Civilization, which has sold more than 51 million units worldwide and accumulated more than one billion hours of play. Sid Meier's Memoir! is the story of an obsessive young computer enthusiast who helped launch a multibillion-dollar industry. Writing with warmth and ironic humor, Meier describes the genesis of his influential studio, MicroProse, founded in 1982 after a trip to a Las Vegas arcade, and recounts the development of landmark games, from vintage classics like Pirates! and Railroad Tycoon, to Civilization and beyond. Articulating his philosophy that a video game should be "a series of interesting decisions," Meier also shares his perspective on the history of the industry, the psychology of gamers, and fascinating insights into the creative process, including his rules of good game design.

This text explores four major features of human society in their ecological and historical context: the origins of priests and organised religion; the rise of military men in an agrarian society; economic expansion and growth; and civilising and decivilising trends over time.

WESTERN CIVILIZATION: A BRIEF HISTORY, Eleventh Edition, maintains a firm grounding in political history, while covering intellectual history (particularly the significance of ideas and contributions) to a greater and deeper extent than any other text for the course. Author Mark Perry's accessible writing style and flexible approach make this abridged version of WESTERN CIVILIZATION: IDEAS, POLITICS, AND SOCIETY an appealing survey text. Updated with more recent scholarship, the Eleventh Edition retains many popular features, including comparative timelines, full-color art essays, and primary source boxes in each chapter. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

In 1412, Europe was a miserable backwater ravaged by plague, bad sanitation and incessant war, while the Orient was home to dazzling civilizations. Yet, somehow, the West came to dominate the Rest for most of the next half millennium. In this vital, brilliant book, Niall Ferguson reveals the six 'killer applications' that the Rest lacked- competition, science, property rights, medicine, consumerism and the work ethic. And he asks- do we still have these winning tools? Or is this the end of Western ascendancy? Winner of the Estoril Global Issues Distinguished Book Prize 2013

This collection of "eloquent essays that examine the relationship between the American landscape and the national character" serves to remind us that despite our differences we all

belong to the same land (Publishers Weekly). "How was it possible, I wondered, that all of this American land—in every direction—could be fastened together into a whole?" What does it mean when a nation accustomed to moving begins to settle down, when political discord threatens unity, and when technology disrupts traditional ways of building communities? Is a shared soil enough to reinvigorate a national spirit? From the embattled newsrooms of small town newspapers to the pornography film sets of the Los Angeles basin, from the check-out lanes of Dollar General to the holy sites of Mormonism, from the nation's highest peaks to the razed remains of a cherished home, like a latter-day Woody Guthrie, Tom Zoellner takes to the highways and byways of a vast land in search of the soul of its people. By turns nostalgic and probing, incisive and enraged, Zoellner's reflections reveal a nation divided by faith, politics, and shifting economies, but—more importantly—one united by a shared sense of ownership in the common land.

A rich and illuminating history of the world capital that has transformed art, culture, and politics. Vienna is unique amongst world capitals in its consistent international importance over the centuries. From the ascent of the Habsburgs as Europe's leading dynasty to the Congress of Vienna, which reordered Europe in the wake of Napoleon's downfall, to bridge-building summits during the Cold War, Vienna has been the scene of key moments in world history. Scores of pivotal figures were influenced by their time in Vienna, including: Empress Maria Theresa, Count Metternich, Bertha von Suttner, Theodore Herzl, Gustav Mahler, Adolf Hitler, Josef Stalin, John F. Kennedy, and many others. In a city of great composers, artists, and thinkers, it is here that both the most positive and destructive ideas of recent history have developed. From its time as the capital of an imperial superpower, through war, dissolution, dictatorship to democracy Vienna has reinvented itself and its relevance to the rest of the world.

A History of the World in 1000 Objects

A History of Civilization

The Next Stage of History

The Collapse of Western Civilization

The National Road

A People's History of Civilization

Renowned historian William H. McNeil provides a brilliant narrative chronology of the development of Western civilization, representing its socio-political as well as cultural aspects. This sixth edition includes new material for the twentieth-century period and completely revised bibliographies. An invaluable tool for the study of Western civilization, the Handbook is an essential complement to readings in primary and secondary sources such as those in the nine-volume University of Chicago Readings in Western Civilization.

The year is 2393, and the world is almost unrecognizable. Clear warnings of climate catastrophe went ignored for decades, leading to soaring temperatures, rising sea levels, widespread drought and—finally—the disaster now known as the Great Collapse of 2093, when the disintegration of the West Antarctica Ice Sheet led to mass migration and a complete reshuffling of the global order.

Writing from the Second People's Republic of China on the 300th anniversary of the Great Collapse, a senior scholar presents a gripping and deeply disturbing account of how the children of the Enlightenment—the political and economic elites of the so-called advanced industrial societies—failed to act, and so brought about the collapse of Western civilization. In this haunting, provocative work of science-based fiction, Naomi Oreskes and Eric M. Conway imagine a world devastated by climate change. Dramatizing the science in ways traditional nonfiction cannot, the book reasserts the importance of scientists and the work they do and reveals the self-serving interests of the so called "carbon combustion complex" that have turned the practice of science into political fodder. Based on sound scholarship and yet unafraid to speak boldly, this book provides a welcome moment of clarity amid the cacophony of climate change literature.

New edition of a textbook which has a long history of its own, having been published in its first edition in 1955. A companion text covers the earlier half of history.

Annotation c. by Book News, Inc., Portland, Or.

*Forgetfulness occurs when those who have been long inured to civilized order can no longer remember a time in which they had to wonder whether their crops would grow to maturity without being stolen or their children sold into slavery by a victorious foe....They forget that in time of danger, in the face of the enemy, they must trust and confide in each other, or perish....They forget, in short, that there has ever been a category of human experience called the enemy. "That, before 9/11, was what had happened to us. The very concept of the enemy had been banished from our moral and political vocabulary. An enemy was just a friend we hadn't done enough for yet. Or perhaps there had been a misunderstanding, or an oversight on our part -- something that we could correct.... "Our first task is therefore to try to grasp what the concept of the enemy really means. The enemy is someone who is willing to die in order to kill you. And while it is true that the enemy always hates us for a reason, it is his reason, and not ours." So begins *Civilization and Its Enemies*, an extraordinary tour de force by America's "reigning philosopher of 9/11," Lee Harris. What Francis Fukuyama did for the end of the Cold War, Lee Harris has now done for*

the next great conflict: the war between the civilized world and the international terrorists who wish to destroy it. Each major turning point in our history has produced one great thinker who has been able to step back from petty disagreements and see the bigger picture -- and Lee Harris has emerged as that man for our time. He is the one who has helped make sense of the terrorists' fantasies and who forces us most strongly to confront the fact that our enemy -- for the first time in centuries -- refuses to play by any of our rules, or to think in any of our categories. We are all naturally reluctant to face a true enemy. Most of us cannot give up the myth that tolerance is the greatest of virtues and that we can somehow convert the enemy to our beliefs. Yet, as Harris's brilliant tour through the stages of civilization demonstrates, from Sparta to the French Revolution to the present, civilization depends upon brute force, properly wielded by a sovereign. Today, only America can play the role of sovereign on the world stage, by the use of force when necessary. Lee Harris's articles have been hailed by thinkers from across the spectrum. His message is an enduring one that will change the way readers think -- about the war with Iraq, about terrorism, and about our future.

A Maritime History of the World

Western Civilization

A comprehensive yet concise introduction to Western Civilization, designed to interest and engage contemporary students Western Civilization: A Brief History is a concise one-volume survey that covers the subject's ancient origins through to the early 21st century. Stressing social and intellectual history, rather than merely listing names and dates, this stimulating resource offers a more consistent and reader-friendly narrative than traditional textbooks. The author, with 40 years' experience teaching college-level Western Civilization and World History courses, emphasizes topics that stimulate student interest and encourage classroom participation. A mixture of Judeo-Christian, Greco-Roman, Germanic traditions, Western Civilization first appeared in Europe following the fall of the Roman Empire in the West. The text explores key events, figures, themes, and characteristics in the history of Western Civilization. Grouped into six parts, chapters include brief chronologies of events, maps, and illustrations. Topics include Europe in the Middle Ages, the Renaissance and Reformation, the rise of medieval Christianity, Darwin and the Theory of Evolution, the Industrial Revolution, imperialism, the World Wars of the 20th century, the Cold War, and many others. Written with the needs of today's students in mind, this textbook: Offers accessible and straightforward coverage of the history of Western Civilization Provides a consistent style of writing and

organizational theme Includes chronological overviews of ancient Greece, Rome, and the Near East Western Civilization: A Brief History is an ideal introductory textbook for both traditional and non-traditional programs and Western Civilization courses at universities and colleges, as well as for those in dual enrollment and home school settings.

The twentieth century in Europe witnessed some of the most brutish episodes in history. Yet it also saw incontestable improvements in the conditions of existence for most inhabitants of the continent - from rising living standards and dramatically increased life expectancy, to the virtualelimination of illiteracy, and the advance of women, ethnic minorities, and homosexuals to greater equality of respect and opportunity. It was a century of barbarism and civilization, of cruelty and tenderness, of technological achievement and environmental spoliation, of imperial expansion and withdrawal, of authoritarian repression - and of individualism resurgent. Covering everything from war and politics to social, cultural, and economic change, Barbarism and Civilization is by turns grim, humorous, surprising, and enlightening: a window on the century we have left behind and the earliest years of its troubled successor.

Featuring the one author, one voice approach, this text is ideal for instructors who do not wish to neglect the importance of non-Western perspectives on the study of the past. The book is a brief, affordable presentation providing a coherent examination of the past from ancient times to the present. Religion, everyday life, and transforming moments are the three themes employed to help make the past interesting, intelligible, and relevant to contemporary society. INSTANT NEW YORK TIMES BESTSELLER A dramatically new understanding of human history, challenging our most fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. Civilization, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today, including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and more full of playful, hopeful possibilities, than we tend to assume. The Dawn of Everything fundamentally transforms our understanding of the human past and offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations

The Crossroads of Civilization

Barbarism and Civilization

The Definitive Visual Guide : from the Dawn of Civilization to the Present Day

A History of Vienna

A Handbook Based Upon H. Gustave Ducoudray's Histoire Sommaire de la Civilisation

A New History of the Western World

The Essential Guide to Western Civilization offers a concise overview of European history developed to suit the undergraduate Western Civilization

curriculum. Author Nicholas L. Waddy provides an accessible account of major developments in European history in a flexible format. The book will serve as a core text for instructors wishing to build a syllabus including primary sources, articles, and visual materials of their own choosing. Discussion questions and a list of key terms at the end of each chapter will help to guide conversation and assist students in navigating the Western Civilization survey.

The American anarchist, primitivist philosopher, and author John Zerzan critiques agriculture-based civilization as inherently oppressive and advocates drawing upon the life of hunter-gatherers as an inspiration for what free society should look like. Subjects of his criticism include domestication, language, symbolic thought, and the concept of time. This book includes sixteen essays ranging from the beginning of civilization to today's general crisis. Zerzan provides a critical perspective about civilization. A People's History of Civilization includes chapters about: Patriarchy The City and its Inmates War Enters the Picture The Bronze Age The Axial Age The Crisis of Late Antiquity Revolt and Heresy Modernity Takes Charge Who Killed Ned Ludd Cultural Luddism Industrialism and Resistance Decadence WWI Civilization's Pathological Endgame In recent years, John Zerzan, co-editor of Black and Green Review, has successfully toured Europe to speak from his primitivist perspective regarding contemporary civilization. Zerzan calls Eugene, Oregon

Ever since the attacks of 11th September, western leaders have described a world engaged in 'a fight for civilization'. But what do we mean by civilization? We believe in a western tradition of openness and freedom that has produced a good life for many millions of people and a culture of enormous depth and creative power. But the history of our civilisation is also filled with unspeakable brutality - for every Leonardo there is a Mussolini, for every Beethoven symphony a concentration camp, for every Chrysler building a My Lai massacre. How can we come to the defence of a civilisation whose benefits seem so questionable? In this ambitious and important book Roger Osborne shows that we can only truly understand our civilization by re-examining and confronting our past, with all its glories and catastrophes. Sweeping in its scope and comprehensive in its coverage, Civilization tells the story of the western world from its origins to the present. At such a dangerous time in the world's history, this brilliant book is required reading.

A monumental, wholly accessible work of scholarship that retells human history through the story of mankind's relationship with the sea. An accomplishment of both great sweep and illuminating detail, The Sea and Civilization is a stunning work of history that reveals in breathtaking depth how people first came into contact with one another by ocean and river, and how goods, languages, religions, and entire cultures spread across and along the world's waterways. Lincoln Paine takes us back to the origins of long-distance migration by sea with our ancestors' first forays from Africa and Eurasia to Australia and the Americas. He demonstrates the critical

role of maritime trade to the civilizations of ancient Egypt and Mesopotamia, and the Indus Valley. He reacquaints us with the great seafaring cultures of antiquity like those of the Phoenicians and Greeks, as well as those of India, Southeast and East Asia who parlayed their navigational skills, shipbuilding techniques, and commercial acumen to establish vibrant overseas colonies and trade routes in the centuries leading up to the age of European overseas expansion. His narrative traces subsequent developments in commercial and naval shipping through the post-Cold War era. Above all, Paine makes clear how the rise and fall of civilizations can be traced to the sea.

About Time: A History of Civilization in Twelve Clocks

The Course of Human History:

Story of Civilization

The Law of Civilization and Decay

VOLUME I - The Ancient World

A New History of Humanity

One of Smithsonian Magazine's Ten Best History Books of 2021 A captivating, surprising history of timekeeping and how it has shaped our world. For thousands of years, people of all cultures have made and used clocks, from the city sundials of ancient Rome to the medieval water clocks of imperial China, hourglasses fomenting revolution in the Middle Ages, the Stock Exchange clock of Amsterdam in 1611, Enlightenment observatories in India, and the high-precision clocks circling the Earth on a fleet of GPS satellites that have been launched since 1978. Clocks have helped us navigate the world and build empires, and have even taken us to the brink of destruction. Elites have used them to wield power, make money, govern citizens, and control lives—and sometimes the people have used them to fight back. Through the stories of twelve clocks, About Time brings pivotal moments from the past vividly to life. Historian and lifelong clock enthusiast David Rooney takes us from the unveiling of al-Jazari's castle clock in 1206, in present-day Turkey; to the Cape of Good Hope observatory at the southern tip of Africa, where nineteenth-century British government astronomers moved the gears of empire with a time ball and a gun; to the burial of a plutonium clock now sealed beneath a public park in Osaka, where it will keep time for 5,000 years. Rooney shows, through these artifacts, how time has been imagined, politicized, and weaponized over the centuries—and how it might bring peace. Ultimately, he writes, the technical history of horology is only the start of the story. A history of clocks is a history of civilization.

"From the beginning of human history, the one thing that has defined us is our talent for making things, from basic technology and everyday objects, such as bowls and hand axes, to high-tech inventions, such as supersonic aircraft, smart devices, and Mars rovers. Objects speak volumes about a civilization, telling us how our ancestors lived - as well as what they believed in and valued. A bronze cat mummy shows us how highly the ancient Egyptians valued their feline companions, while a mechanical tiger toy tells the story of rising tensions between an Indian sultan and European colonisers. With stunning, specially commissioned photography,

Civilization shows you the objects that our ancestors treasured - from the jewellery worn by the Mesopotamians to the prized ritual vessels used by the people of the Shang dynasty - and gives you an insight into what gave each culture its own identity. From astrolabes and aeroplanes to vacuum cleaners and X-rays, DK uses its hallmark visual style to weave the extraordinary legacy of our creativity into a unique view of world history that will change the way you see the objects all around us."--Publisher.

Throughout its 4,000-year history, Korea has created a vibrant and unique culture. Unfortunately, many believe it developed solely due to Chinas influence, thus leaving no room for an independent history and culture. This is simply wrong. The New History of Korean Civilization explores the existence of a distinctive Korean culture established by the Korean people and separate from its Chinese and Japanese counterparts. Author Chai-Shin Yu, distinguished professor of Korean studies, surveys the history of cultural life in Korea and provides a detailed account of this countrys remarkable heritage. From the prehistoric age through the rise of the Choson Dynasty and up to the creation of the Republic of Korea, this concise history traces the development of history, politics, philosophy, religion, literature, and art. Chai-Shin Yu shows how Korean culture also played a vital role in the formation of Japanese culture. Written for the purpose of introducing the roots of Korean culture to Westerners and second-generation Koreans living in the West, The New History of Korean Civilization is a bold addition to the historiography of Korea.

Western civilization and world history are often seen as different, or even mutually exclusive, routes into historical studies. This volume shows that they can be successfully linked, providing a tool to see each subject in the context of the other, identifying influences and connections. Western Civilization in World History takes up the recent debates about the merits of the well-established 'Western civ' approach versus the newer field of world history. Peter N. Stearns outlines key aspects of Western civilization - often assumed rather than analyzed - and reviews them in a global context.
