Volcanic eruptions are common, with more than 50 volcanic eruptions in the United States alone in the past 31 years. These eruptions can have devastating economic and social consequences, even at great distances from the volcano. Fortunately

many eruptions are preceded by unrest that can be detected using ground, airborne, and spaceborne instruments. Data from these instruments, combined with basic understanding of how volcanoes work, form the basis for forecasting eruptions—where, when, how big, how long, and the consequences. Accurate forecasts of the likelihood and magnitude of an eruption in a specified timeframe are rooted in a scientific understanding of the processes that govern the storage, ascent, and eruption of magma. Yet our understanding of volcanic systems is incomplete and biased by the limited number of volcanoes and eruption styles observed with advanced instrumentation. Volcanic Eruptions and Their Repose, Unrest, Precursors, and Timing identifies key science questions, research and observation priorities, and approaches for building a volcano science community capable of tackling them. This report presents goals for making major advances in volcano science.

The Gift of the Magi is a treasured short story written by O. Henry. A young and very much in love couple can barely afford their one-room apartment, let alone the extra expense of getting Christmas presents for one another. But each is determined to show their love for the

other in this traditional time of giving; each sells a thing they hold most dear in order to afford a present, with poignant and touching results that capture their love for one another. Deep-water coral reefs are found along large sections of the outer continental shelves and slopes of Europe, from North Cape to the Gulf of Cadiz, and because they also occur along the Atlantic seaboard of USA, the Gulf of Mexico, off Brazil, in the Mediterranean, and off New Zealand, they are currently being targeted by international groups of marine scientists. They have become popular and opportune deep-water research targets because they offer exciting frontier exploration, combined with a whole plethora of modern scientific methods, such as deep-sea drilling, sampling, remote control surveying and documentation. Furthermore they represent timely opportunities for further developments within the application of geochemistry, stable isotope research, bacterial sciences, including DNA-sequestering, and medical research (search for bioactive compounds). The Integrated Ocean Drilling Program (IODP) has arranged a deep-sea scientific drilling campaign on giant carbonate banks off Ireland. Because the reefs currently defy traditional marine-ecological theories, they represent future research opportunities and will enjoy scientific scrutiny for many years to come.

Envisioning Machine Translation in the Information Future When the organizing committee of AMTA-2000 began planning, it was in that brief moment in history we were absorbed in contemplation of the passing of the century and the miller. Nearly everyone was comparing lists of the most important accomplishments of people of the last 10, 100, or 1000 years, imagining the radical changes likely over the next few years, and at least mildly anxious about the potential Y2K apocalyptic millennial theme for the conference, "Envisioning MT in the Information Future," arose from this period. The year 2000 has now come, and nothing terrible has happened (yet) to our electronic infrastructure. Our musings about great people and events probably did not ennoble us much, and whatever sense of jubilee we held

since dissipated. So it may seem a bit obsolete or anachronistic to cast this AM conference into visionary themes.

The Poverty of Privacy Rights makes a simple, controversial argument: Poor mothers in America have been deprived of the right to privacy. The U.S. Constitution is supposed to bestow rights equally. Yet the poor are subject to invasions of privacy that can be perceived as gross demonstrations of governmental power without limits. Courts have routinely upheld the constitutionality of privacy invasions on the poor, and scholars typically understand marginalized populations to have "weak versions" of the privacy rights everyone else enjoys. Khiara M. Bridges investigates poor mothers' lived experiences with the state—both when they receive public assistance and when they do not. Presenting a holistic view of just how the state intervenes in all facets of poor mothers' privacy, Bridges shows how the Constitution has not been interpreted to bestow these women with family, informational, and reproductive privacy rights.

Bridges seeks to turn popular thinking on its head: Poor mothers' lack of privacy is a function of their reliance on government assistance—rather it is a function of not bearing any privacy rights in the first place. Until we disrupt the cultural narratives that equate poverty with immorality, poor mothers will continue to be denied the right to privacy.

This volume contains one invited lecture which was presented by the 1994 Fields Medalist Professor E. Zelmanov and twelve other papers which were presented at the International Conference on Algebra and Their Related Topics at Chang Jung Christian University, Tainan, Republic of China, during the period June 26–July 1, 2001. All papers in this volume have been refereed by an international referee board and we would like to express our deepest thanks to all the referees who were so helpful and punctual in submitting their reports. Thanks are also due to the Promotion and Research Center of the National Science Council of Republic of China and the Chang Jung Christian University.

for their generous financial support of this conference. The spirit of this conference is a continuation of the last two International Tainan Moscow Algebra Workshop on "Algebras and Their Related Topics" which were held in the mid-90's of the last century. The purpose of this very conference was to give a clear picture of the recent developments in research in the fields of different kinds of algebras both in Taiwan and in the rest of the world, especially say, Russia, Europe, North America and South America. Thus, we are hoping to enhance the possibility of future cooperation in research work among algebraists of the five continents. Here we would like to point out that this algebraic gathering will constantly be held in the future in the southern part of Taiwan.

Apollo 11 astronaut Buzz Aldrin's courageous, candid memoir of his return to Earth after the historic moon landing and his personal struggle with fame and depression "I landed with all the grace of a freight elevator," Buzz Aldrin relates in the opening passages of *Return to Earth*, remembering Command Module Columbia's abrupt reentry into the gravity of the blue planet. With that splash, Aldrin takes readers on a journey through the human side of the space program, as one of the first two men to land on the moon learns to cope with the pressures of his new public persona. In honest and compelling prose, Aldrin reveals a side of instant fame for which West Point and the military could never have prepared him. One day a fighter pilot and engineer, the next a combat hero burdened with the adoration of thousands, Aldrin gives a poignant account

affair that threatened his marriage, as well as his descent into alcoholism and death that resulted from trying to be too many things to too many people. He didn't realize when he landed on his home planet his odyssey had just begun. As Aldrin puts it, "I traveled to the moon, but the most significant voyage of my life began when I returned from where no man had been before." Return to Earth is a powerful and moving memoir that exposes the stresses suffered by those in the Apollo program and the price Aldrin paid when he became an American icon.
