

Clinical Medicine For The Mrcp Paces Volume 1 Core Clinical Skills

MRCP PACES is a challenging examination requiring in-depth clinical knowledge, excellent clinical skills and the ability to present each case concisely and coherently. This revision guide helps candidates achieve these aims; it is compact enough for bedside use and sufficiently comprehensive for self-study. The new edition follows the structure of the current PACES exam and has an expanded section on Station 5. As well as a wealth of up-to-date questions for practice, it includes extensive new clinical information on new therapies and details of the latest investigations and management options. Each chapter has been reviewed by senior clinicians within the specialty. •Presents all seven stations in one book •Provides practical hints and tips for success at each station •Presents much more comprehensive information in a compact and accessible format than other books •Provides evidence-based information, guidelines and questions mapping onto the latest examination format. This book teaches the candidate not only how to pass the PACES exam, leading the reader through each case and exactly what is expected of them, but also provides a succinct yet detailed clinical handbook for support on medical wards.

The 3rd edition of PACES for the MRCP has been fully revised and updated throughout to retain its pole position as the textbook to accompany core medical training (CMT) and prepare candidates for success in the Practical Assessment of Clinical Examination Skills and a future specialty career. Features Fully revised for the new Station 5 and completely updated throughout. Promotes understanding and deeper learning of modern medicine applicable to PACES and the specialist registrar. Emphasis on clinical assessment – history-taking, examination and communication skills – equipping candidates with appropriate differential diagnoses from which to develop the right diagnosis. Encourages candidates to question why a diagnosis has arisen and consider its consequences. For example, ‘Heat failure’ is a not a diagnosis until a candidate has considered the differential diagnoses of breathlessness and decided why heart failure is most likely, and then considered its cause (not always ischaemic heart disease), its presentation (acute, chronic, left or right ventricular or both) and, most importantly, the effects of it and its treatments on a patient’s life. This 3rd edition of PACES for the MRCP continues to provide fully revised, up-to-date, evidence-based coverage of investigations and treatments. Whilst the emphasis of PACES is on clinical skills, candidates who understand when, for example, a patient with rheumatoid arthritis might benefit from a biologic agent and how this will influence inflammatory disease, is better equipped for success. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam – respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each case – excellent preparation for the exam Boxed tips highlight vital information – helps identify what is most important to remember Produced in full colour throughout Colour coding for each station Many more illustrations added - now over 300 clinical photographs and line drawings in colour Many more cases added, bringing the number up to 250 - 50 per station History-taking and communication skills stations now revised so that they exactly mimic the requirements of the exam

A revision book intended primarily for candidates sitting their MRCP Part 1 examination and which covers all the essential basic sciences. It focuses on the recurring themes which come up in the questions. The book also includes a chapter on clinical pharmacology (which alone accounts for up to 30% of the questions), looking at aspects of drug-induced disease and drug interactions. Finally there is a chapter on statistics and epidemiology which is rarely covered in other texts, but is often included in the exam. Despite the changes to the teaching of the undergraduate in medicine and the integration of the basic sciences with clinical education, the junior doctor, faced with postgraduate examinations, is always going to be poorly prepared for those increasingly important subjects. This book presents the essential information in the form of lists, tables, diagrams and flow charts.

The Oxford Handbook of Acute Medicine provides a handy and practical guide to the management of emergency situations in everyday clinical practice. It is aimed at the newly qualified doctor, following on from the Oxford Handbook of Clinical Medicine. It provides step-by-step details on the current diagnostic and management principles necessary to allow junior doctors to deal with medical emergencies safely and effectively. It assumes a basic knowlege of disease processes, physical examination skills, and medical terminology, and concentrates on therapeutic and diagnostic decisions. It will als

Rapid Review of Clinical Medicine for MRCP Part 1

Medical curricula change continually to reflect the evolving roles of doctors, changes in treatments and advances in technology. Medicine moves at pace and it takes a practitioner committed to continuing professional development to keep up. This new edition of 250 Cases in Clinical Medicine has been thoroughly updated to reflect the changing form of the Royal College of Physicians’ curriculum. Some chapters from the previous edition have been dropped to allow new, more clinically relevant topics to be included. Chapters of symptom-based cases have also been added, as well as a section on acute medical problems and their management. Essential reading for MBBS, PLAB, MRCP (UK), MRCPI, MD (New Zealand, Malaysia, Singapore, India, Pakistan, Sri Lanka and Bangladesh), FRACP, FCCP and postgraduate medical examinations in the USA including USMLE and ABIM. New author team Cases alphabetised by system Procedures for the core medical curriculum added Symptoms-based cases added Emergency presentations added Self-assessment by system added Accompanying e-book on StudentConsult Now in full colour

About this book This concise book is aimed to assist candidates for the Royal College of Physicians MRCP PACES exam. The exam consists of 5 stations, each of which is scored on 7 different skills. This book also caters to medical students and junior doctors, who wish to learn the art of correct clinical examination. This book takes the reader through all of the clinical stations in order, detailing the required clinical examination for each station and describing appropriate communication skills. "There is a plethora of publications to help candidates prepare for written higher examinations in medicine but few that deal with modern clinical examinations. This book meets that need and fills the gap in current provision for aspiring physicians working towards their formal qualifications." Stephen Allen BSc MD FRCP MBA, Consultant Physician and Visiting Professor, The Royal Bournemouth Hospital, UK. About the author Dr. Deepa Iyer is a physician who is passionate about medicine and enjoys teaching the correct clinical examination skills to medical students and junior doctors who are keen to learn. Having successfully passed the MRCP PACES exam herself, she was unable to find a clinical examination book helping doctors through this new examination format. Drawing upon her own experiences, Dr Deepa Iyer has produced this small but essential book to guide the candidate through the exam.

Edited by Adam Feather, MBBS, FRCP, FAcadMed; David Randall, MA, MRCP; and Mona Waterhouse, MA, MRCP Contributors comprise consultants at the top of their fields, paired with younger doctors closer to the exam experience, to ensure authority and relevance. Enhanced e-book accompanies the print book, for ease of transportation and use on the move. International Advisory Board, led by Professor Janaka de Silva and Professor Senaka Rajapakse, providing guidance for global coverage from across the world. Contributions to the e-book by members of the International Advisory Board to amplify areas of clinical importance in their parts of the world.

A new, fully updated edition of Baliga’s very popular collection of short cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in the short-case part of the Final MB and MRCP examinations. Also included are likely instructions or commands expected from the examiner for each condition, and the key points which the candidate must tell the examiner. A must-have for the final-year undergraduate and trainee doctor. From customer reviews of the previous edition: 'This book is the most useful guide that money can buy for the final exams in the current MBChB undergraduate course. It covers important areas of clinical medicine in a question based format and highlights classical scenarios. The questions raised are classical of examiners in the long and short case examinations. This is a must buy for any undergraduate medical student!!!' 'The book is a must during the period that the young doctor or student is on the wards. It allows one to focus on the important physical findings and the relevant clinical pearls associated with the different medical conditions met... It discusses important physical findings and their diagnostic importance. I have found it useful in preparing for attending ward rounds and also for sharpening my clinical skills. The discussion section is well organised such that undergraduates as well as postgraduates can benefit and the material is up to date with good references for further reading.' 'Excellent preparation for finals as well the MRCP ...MUST HAVE before MRCP PACES.' Features Ideal for use in the ward. Each of the 250 cases presents a disease or topic which is covered consistently to address:● salient features ● history ● examination ● diagnosis ● questions covering investigations and differentiations ● advanced-level questions ● management. New to this edition: Over 350 new images Enhanced advanced-level questions Many more tables

Clinical Medicine For The Mrcp Paces;

The Pocketbook for PACES

Mrcp 1 Pocket Book 1

100 Short Cases for the MRCP, 2Ed

Chestnuts for the MRCP

This text presents a collection of clinical cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in clinical examinations in general internal medicine.

This book serves as a concise revision aid for the case histories section of the written paper for Part 2 of the MRCP examination. The book assists candidates in developing the necessary speed, thoroughness and accuracy in applying clinical examination and diagnosis in the exam setting. This book should be of interest to MRCP candidates, and postgraduate physicians.

Medicine for MRCP provides a comprehensive review of the material that you need to pass the MRCP Parts 1 and 2 written papers. The twenty-seven chapters mapped out to the RCP syllabus, cover all areas from molecular medicine and genetics, through to medical law and ethics. Written by specialist contributors and educational experts, the content is carefully crafted to build your understanding for both papers. Each chapter begins with the basic science required for Part 1, before covering clinical medicine for Part 1, Part 2 and the PACES examinations. To ensure effective revision, material is presented in short sections with bullet lists, tables, and boxes. Over 150 drawings and photos illustrate key principles and clinical topics making them easier to retain. References to evidence-based protocols and directions to further reading allow for deeper understanding. Candidates can review their progress via the 180 end-of chapter self-assessment questions. Drawing on the authors' expertise, Medicine for MRCP is the ideal companion for the MRCP as well as a useful reference guide for practicing medical doctors.

This title is written for MRCP candidates preparing for PACES exam in UK and rest of world. Clinical examinations in the OSCE style of marked stations are daunting for all students, whether undergraduates or MRCP candidates. The recent introduction of the 5-station PACES (Progressive Assessment of Clinical Examination Skills) exam inspired a great deal of apprehension, so the appearance of the first edition of Hall's PACES for MRCP was greatly welcomed by candidates and became an immediate success. This new edition builds on the book's reputation. It provides, in one colourful and attractive volume, complete coverage of all the most common medical cases that will be covered in PACES and similar exams. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam - respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each case - excellent preparation for the exam Boxed tips highlight vital information - helps identify what is most important to remember Produced in full colour throughout Colour coding for each station Many more illustrations added - now over 300 clinical photographs and line drawings in colour Many more cases added, bringing the number up to 250 - 50 per station History-taking and communication skills stations now revised so that they exactly mimic the requirements of the exam

Clinical Medicine for the MRCP PACES

Kumar and Clark’s Clinical Medicine E-Book

Providing a clear explanation of the relevant medical science behind the individual medical specialties, Basic Science for Core Medical Training and the MRCP, is an indispensable part of a candidate's MRCP preparation. Directly linked to the Royal College exam, the book follows the same systems-based approach as the syllabus for accurate and effective revision. With full coverage of basic science for the medical specialities, the book features material on genetics, cellular, molecular and membrane biology, and biochemistry. Content is presented in an illustrated and easy-to-read format, ensuring that the basic science for each medical specialty is more approachable and accessible. A focus on how the basic sciences aid understanding of clinical practice is reinforced through key tables of differential diagnoses and pharmacology. Ten multiple choice questions at the end of each chapter consolidate learning and enable candidates to test their knowledge. The book also covers common examination errors and areas of misunderstanding to aid learning and help candidates avoid common pitfalls.

Part of MRCP 1 Pocket Book series, this book features questions and answers providing essential practice for the MRCP Part 1 exam.

Neurology has a reputation as a difficult area in the MRCP examinations, with the clinical neurology stations (PACES and traditional short cases) being especially feared by candidates. This book aims to demystify the subject, and help candidates avoid becoming bogged down in unnecessary detail and to clarify their thoughts and expression. The book is divided into three major sections covering areas of the body, each organised according to the possible instructions that candidates are likely to encounter in the exam. They include summaries of essential examination steps to be undertaken, possible clinical findings, brief discussions in question and answer format, and tips and pitfalls. Concise, clear and engaging, this is an essential aid for candidates preparing for the MRCP clinical neurology stations.

Oxford Handbook of Acute Medicine

with 250 Clinical Cases

Essential Revision Notes in Medicine for Students

The MRCP PACES Handbook

MRCP II (Internal Medicine) Made Easy

This book is not designed to be easy reading. It is simply a catalogue of lists that have been amalgamated by previous MRCP candidates who have sat the Part 1 and Part 2 examinations. The lists, or 'chestnuts', contain the most important differential diagnoses that are relevant to clinical practice and the MRCP exam. The lists will enable you to create useful differential diagnoses on the spot. As the format of the MRCP examination is constantly under review, it is hoped that these lists will provide a concise and portable text, which will be continually relevant to the examination, as well as clinical medicine.

This book provides a bank of multiple-choice questions for candidates preparing for Part 2 of the Membership examination of the Royal Colleges of Physicians, the MRCP. The questions are arranged by subject area to enable structured revision and allow candidates to focus on particular areas where they feel less confident. The book has been written with a close focus on recent examinations, with the coverage of topics weighted to reflect the frequency with which they have appeared. The book is structured more as a manual than as a mock exam, and includes explanations for both correct and incorrect answers, focusing comprehensively on the fundamental principles of medical practice. As well as candidates for the MRCP, this book will also be of interest to medical students and students of related health sciences.

EMQs are a popular method of assessing how broad a knowledge of medicine an undergraduate has acquired. They can, however, be difficult to prepare for, and the best way to build understanding and confidence is with practice. Presenting 100 key EMQs covering the core areas of medicine and surgery, care had been taken by the authors to structure the questions and answers so that they reflect accurately the themes uncountered during study and, specifically, in final exams. Each subject covered is accompanied by a revision section which summarises key points and cross references them to other questions for revision purposes. Questions related to pharmacology, an area which many students find particularly challenging, are threaded throughout the book where relevant, mirroring the integrated teaching methods common to most medical schools. The second edition of EMQs in Clinical Medicine has been thoroughly revised and updated to reflect medical developments, while retaining the clear and comprehensive approach and popular revision boxes of its predecessor. The authors' first-hand experience of EMQ-based examinations, and awareness of the importance of reliable and accurate revision guides to medical students, ensure EMQs in Clinical Medicine remains and invaluable resource for all medical students undertaking the clinical part of their training, and an ideal companion during finals preparation.

This new book contains 350 'best of five' multiple-choice questions for the new MRCP (UK) Part 1 exam. The questions cover a wide range of topics in both clinical medicine and applied basic sciences. The answers are fully descriptive and will help the candidate appreciate why the correct answer is the best of the five given, and include useful background information. The questions are in random order by topic, with the first 50 being less difficult - and thereafter the questions get more challenging. To aid revision, there is an appendix at the end of the book that lists the questions under topic headings. A new book of 350 new-style best of five questions in the style of the MRCP (UK) Part 1 exam Questions presented randomly by topic - as they would be encountered in the real exam Has fully descriptive answers Covers both clinical and basic science topics Includes an appendix where questions are grouped according to topic

MRCP Part 1: 400 BOFs

PACES for the MRCP

Clinical Medicine For The Mrcp Paces

EMQs in Clinical Medicine Second Edition

MRCP Part 2

Designed to help medical students through their exams. Built around the successful 'Essential Revision Notes for MRCP', this title focuses on what is essential learning for medical undergraduates and gives readers an 'all round' knowledge of medicine at this level.

This book is an invaluable resource with 400 self-assessment cases and data interpretation questions covering all aspects of internal medicine. It has great breadth of coverage, superb illustration, lively presentation, precise answers and detailed discussion.

MRCP SCE in Respiratory Medicine: 300 SBAs is the ideal revision guide for candidates preparing for the MRCP SCE in respiratory medicine. The book offers a wealth of practice questions that test candidates' knowledge and understanding of the clinical sciences relevant to specialist medical practice. Chapters follow the JRCPTB specialty training curriculum for respiratory medicine, while detailed answers and explanations reinforce understanding. This book provides essential revision to maximise chances of exam success. Key points 300 SBA questions with correct answers and thorough explanations, and rational clarification of incorrect options Number of questions for each part of the syllabus follows MRCP(UK) blueprint, ensuring effective targeted revision Gives practical advice on how to approach revision and useful tips to improve exam technique

This highly detailed medical handbook provides all the material needed for physicians facing the new MRCP. It is a complete guide to post-graduate examinations in medicine which provides insightful information and advice from the point of view of the examiner. The extensive discussion of answers and a constant focus on how to make a diagnosis with incomplete data (which is how illnesses present in reality) is integrated with an up to-to date knowledge of medicine. The advice and answers imparted in this book enables the physician to solve the most complex problems in the traditions of the methodology of the Royal Postgraduate Medical School, Hammersmith Hospital, London. With over 160 clinical scenarios, this guidebook is designed to help physicians prepare for the new multiple-choice questions. The book adopts a different approach, which encourages the candidate to think the problem through himself before looking at the answers. It allows the activation of the subconscious and enables the entire pattern to be intuitively understood as a Gestalt, thus prompting experience of the Eureka effect. This is the expert method used in bedside clinical problem-solving by master clinicians. MRCP II (Internal Medicine) Made Easy is more than a handbook as is evident from the author's, W.M.Chong's personal Buddhist beliefs and his linkage of the exploration of the source of the religious training and belief in Buddha, with medicine. The Author states that indeed the historical Buddha can be perceived as one of the first Physicians who used the same "modern" medical approaches to make: [The diagnosis (which is the fact that life is characterised by suffering); [The aetiology (which is based on our nature of clinging, pride and ignorance); [The prognosis (which is good) and [The treatment (which is the fact that there is a way out, the details of which are beyond the scope of this book) Although these words come from a source 2,500 years ago, it is as true today for all the candidates taking this exam. W.M.Chong offers here extremely beneficial and applicable medical methods for finding the "way out." In this particular context, it is to master this book and the methodology therein.

MRCP SCE in Respiratory Medicine: 300 SBAs

Basic Sciences for Core Medical Training and the MRCP

The Ultimate Guide to Passing Clinical Medicine Finals

Best of Five MCQs for the Acute Medicine SCE

Following the super-success of their MRCP Part 2 volume, the authors adapt their special teaching skills to the needs of MRCP Part 1 and similar exams in internal medicine. The book consists of 360 'Best of 5' multiple choice questions (1,800 clinical decision) reflecting the latest exam format. It covers all areas of clinical medicine needed by exam candidates and includes psychiatry and applied basic science. The answers contain full didactic explanations to ensure the reader understands each condition or topic, and features lists, tables and tutorials to guide candidates in their revision and exam technique. The book has proved invaluable to young doctors studying for higher exams in internal medicine and to medical tutors preparing post graduate examinations.

Best of Five MCQs for the Acute Medicine SCE is a new revision resource designed specifically for this high-stakes exam. It contains over 350 Best of Five questions with explanatory answers, each accurately reflecting the layout of questions in the exam.

Each case is divided into presentations with numbered references to clinical notes, and a further section devoted to questions commonly asked by examiners. The case presentation section provides detailed guidance to examination technique relevant to specific cases.

A book of over 150 cases which mimic the style and approach of the MRCP PACES exam. The book will equip the candidate attempting to pass the MRCP examination, and will also provide an overview of evidence-based medicine for competency-based training.
