cells? It's true.

Microbes are essential

to our everyday lives,

from the food we eat

to the very internal

systems that keep us

alive. These microbes

include bacteria,

algae, fungi, viruses,

and nematodes.

Without microbes, life

on Earth would not

survive. It's amazing

to think that all life is so dependent on these microscopic creatures, but their impact on our future is even more astonishing.

Microbes are the tools that allow us to engineer hardier crops, create better medicines, and fuel our technology in sustainable ways.
