This book is about effective change. It describes methods for changing "whole systems," that is, change based on two powerful foundation assumptions: high involvement and a systemic approach to improvement. High involvement means engaging the people in changing their own system. It is systemic because there is a conscious choice to include the people, functions, and ideas that can affect or be affected by the work. Whole system change methods help you initiate high-leverage, sustainable improvements in organizations or communities. "High-leverage" is emphasized because in any improvement effort, we want the highest possible value for the effort invested. We believe that involving people in a systematic way is a key to high leverage and that the methods in this book can provide this leverage for you. You'll need to determine the one(s) best suited to moving your organization or community to the culture you want. We wrote this book to support your efforts. The book is intended to answer questions such as: What methods are available that have proven successful in addressing today's needs for organizational or community change? What are the key distinctions among these methods? How do I know if a method would be a good fit for my organization or community? How do I get started after I select one or more methods? To make a good choice, you'll need some basic information. Rather than provide details of how to do each method, we give you an overview of what's available and some tools to help focus your exploration.

Understanding the main concepts of IFRS Standards The fourth edition of Applying IFRS Standards explains the core principles of International Financial Reporting (IFRS) Standards. It also addresses the skills needed to apply the standards in business environments. The book begins with an overview of the International Accounting Standards Board (IASB) and how it establishes accounting standards. The general book topics are then covered in detail and include: income taxes, financial instruments, fair value measurement, property, inventories, employee benefits and more. Discussion questions, exercises and references are provided throughout the book.

Covers the strategic management topics in cost accounting. This title helps students to understand about the management and the role of cost accounting in helping an organization succeed. It addresses issues such as: How does a firm compete? and What type of cost management information is needed for a firm to succeed?

This is an introductory level text for students undertaking accounting or business studies that offers a foundation to financial accounting. An interactive approach has been adopted to integrate the theory with practical situations.

The rapid growth of home health care has raised many unsolved issues and will have consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors research--the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the National Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices. On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the culmination of the first phase of the study. This book discusses and illustrates practical problem solving in the major areas of chemical and biochemical engineering and related disciplines using the novel software capabilities of POLYMATH, Excel, and MATLAB. Students and engineering/scientific professionals will be able to develop and enhance their abilities to effectively and efficiently solve realistic problems from the simple to the complex. This new edition greatly expands the coverage to include chapters on biochemical engineering, separation processes and process control. Recent advances in the POLYMATH software package and new book chapters on Excel and MATLAB usage allow for exceptional efficiency and flexibility in achieving problem solutions. All of the problems are clearly organized and many complete and partial solutions are provided for all three packages. A special web site provides additional resources for readers and special reduced pricing for the latest educational version of POLYMATH.

The previous conference in Nice in 2003 focused on the determination of the specific actions that lead to superior organizational performance. This included the characteristics of superior performance and the identifiable features of management control and performance measurement systems that drive improved performance along with relevant performance measures. But, there are often dysfunctional consequences of the drive for superior organizational performance. Numerous stakeholders are often impacted both positively and negatively by the drive for superior organizational performance. These stakeholders often include employees, customers, suppliers, the community, and others. Much current research focuses on how organizations and managers can minimize negative internal impacts and externalities and use management control and performance measurement to improve both organizational performance and the impacts on employees and society. This book contains a compendium of some of the excellent papers presented at a workshop on Performance Measurement and Management Control: Improving Organizations and Society in September, 2005 in Nice, France. Sponsored by the European Institute for the Advanced Study in Management (EIASM) and EDHEC School of Management, this workshop attracted leading scholars on management control and performance measurement from around the world. The primary questions addressed at the conference relate to the specific managerial actions that can be taken to drive superior organizational performance and the determination of the most appropriate measures of long term success in organizational performance. Many papers also addressed the social impacts of these actions. The papers in
