This best-selling workbook, helps traditionally unsuccessful students learn to effectively study mathematics. Typically used for a Math Study Skills course, Freshman Seminar, or as a supplement to class lectures, the Noting workbook helps students identify their strengths, weaknesses, and personal learning styles in math. Noting offers proven study tips, test-taking strategies, a homework system, and recommendations for reducing anxiety and improving grades. New features to the Third Edition include the Learning Modality Inventory and Dan's Take. Since students become more motivated when they understand how math directly relates to their lives, a new appendix chart shows how mathematical success can impact their career opportunities and earning potential. Material has also been streamlined and updated to make it more relevant to today's students. New Learning Modality Inventory helps students determine their own learning style. With this knowledge, students can identify and implement study habits that are best suited to them. New Dan's Take appears in every chapter and presents a student's perspective of different challenges that are encountered in the classroom. These segments are designed to inspire students and decrease their anxiety about math. New Coverage of cooperative learning has been added to assist instructors who favor group work. New! Another exciting new identity support resource, Becoming an Online Learner, offers essential guidance for using technology to study and learn. Likewise, Student's Overview Technophobia, a boxed feature from the best-selling Houghton Mifflin series Becoming a Master Student, offers helpful suggestions to students intimidated by technology. Updated! The chapter opening sections have been redesigned to include captivating photographs and more clearly defined objectives, which help students navigate each chapter more smoothly.

The free book "Fundamentals of Computer Programming with C#" is a comprehensive computer programming tutorial that teaches programming, logical thinking, data structures and algorithms, problem solving and high quality code with lots of examples in C#. It starts with the first steps in programming and software development like variables, data types, conditional statements, loops and arrays and continues with other basic topics like methods, numerical systems, strings and string processing, exceptions, classes and objects. After the basics this fundamental programming book enters into more advanced programming topics like recursion, data structures (lists, trees, hash-tables and graphs), high-quality code, unit testing and refactoring, object-oriented principles (inheritance, abstraction, encapsulation and polymorphism) and their implementation to the C# language. It also covers fundamental topics that each good developer should know like algorithm design, complexity of algorithms and problem solving. The book uses C# language and Visual Studio to illustrate the programming concepts and explains some C# / .NET specific technologies like lambda expressions, extension methods and LINQ. The book is written by a team of developers lead by Svetlin Nakov who has 20+ years practical software development experience. It teaches the major programming concepts and way of thinking needed to become a good software engineer and the C# language in the meantime. It is a great start for anyone who wants to become a skillful software engineer. The books does not teach technologies like databases, mobile and web development, but shows the true way to master the basics of programming regardless of the languages, technologies and tools. It is good for beginners and intermediate developers who want to put a solid base for a successful career in the software engineering industry. The book is accompanied by free video lectures, presentation slides and mind maps, as well as hundreds of exercises and live examples. A fully revised and updated edition of the bible of the newspaper industry The first practical guide of its kind that helps students transition smoothly from high school to college The transition from high school--and home--to college can be stressful. Students and parents often arrive on campus unprepared for what college is really like. Academic standards and expectations are different from high school; families aren't present to serve as "scaffolding" for students; and first-years have to do what they call "adulting." Nothing in the college admissions process prepares students for these new realities. As a result, first-year college students report higher stress, more mental health issues, and lower completion rates than in the past. In fact, up to one third of first-year college students will not return for their second year--and colleges are reporting an increase in underprepared first-year students. How to College is here to help. Professors Andrea Malkin Brenner and Lara Schwartz guide first-year students and their families through the transition process, during the summer after high school graduation and throughout the school year, preparing students to succeed and thrive as they transition and adapt to college. The book draws on the authors' experience teaching, writing curricula, and designing programs for thousands of first-year college students over decades.

Offers advice about taking multiple choice and essay CLEP examinations; describes each subject on the test, including English, foreign languages, and history; and aids in the interpretation of scores.

This study was designed to investigate practical and effective methods of increasing reading compliance, reading comprehension, and metacognitive reading strategies in the college classroom. Participants were recruited from Delta State University, a small university located in Cleveland, MS. There were 148 students who completed the study. 50% of these participants were Caucasian and 42% were African American. The average age of the participant was 20.0 years of age. Students were primarily freshman and sophomore undergraduate students taking a Psychology course. The following instruments were used during the course of this study: The Nelson Denny Reading Test, The College Textbook Questionnaire, The Survey of Reading Compliance (pretest and posttest), two teacher-made comprehension tests, and the Metacognitive Reading Strategies Questionnaire (pretest and posttest). The independent variables in this study were the threat of the Monte Carlo quiz and the availability of the Readers Guide. Dependent variables included the scores from the Survey of Reading Compliance (pretest and posttest), scores from the comprehension (pretest and posttest), and scores from the Metacognitive Reading Strategies (pretest and posttest). Results from this study suggest that the majority of college undergraduates reported reading the course textbook 2 hours or less per week according to the results from the Nelson Denny Reading Test, undergraduates scored relatively high on comprehension. However, performance on the teacher-made comprehension tests based on textbook material was very low. The Metacognitive Reading Strategies Questionnaire suggested that undergraduates are utilizing some basic metacognitive reading strategies, but do not use more sophisticated strategies. The threat of the Monte Carlo quiz had no statistically significant effect on reading compliance, comprehension, or metacognitive reading strategies. The Readers Guide did not have a statistically significant effect.

Poetry. Rachel Zvia Back's third full-length book of poems, A MESSENGER COMES is a harrowing book that takes the reader to the edge of grief. As Hank Lazer's writes, while Back's book is "beautifully rich and emotionally engaging, this is no simple book of consolation. In its steadfast beauty, it is a book of questions: can grief be sustained? What can we learn from the grief of another? Thus this is a messenger we will want and need to welcome time and again."

Study Guide and Lecture NotebookCORNELL Notes, T.H.I.E.V.E.S. study method, College & High School Lecture Notes, Study Skills, Workbooks, Test Preparation, Instruction Methods, Subject Notebooks This academic STUDY GUIDE AND LECTURE NOTEBOOK provides an academically-based organizational layout for the high school or university student to write vital information about the course topic, keep track of contact information for the instructor and class peers, as well as to study using a blend of proven study methodologies, including the following systems: The Cornell Notes Method provides a system to condense / organize lecture notes by dividing the note-taking into two columns (pages): the note-taking column (usually on the right) with notes for summarizing lecture notes pages on the left-hand side (page). The summarization page allows the student to quickly summarize key points from the lecture notes on the right page to bullet points on the left page. The Textbook review section uses the T.H.I.E.V.E.S. study strategy, where the student / learner reviews and summarizes the information in the course textbook, with notes broken out into: T - title H - headings I - introduction E - every paragraph (first sentence) V - visuals / vocabulary - summarizing what the graphics are representing E - end of chapter questions S - summarize the entire chapter's content How to Use the Study NotebookThe student will take notes on the right hand pages marked Lecture notes in class. It is best to not try to write word-for-word, but to note the high-points of the important topics of the lecture. When finished, during a study session, the student will go back to the notes and using the left-hand page, summarize important points by listing points that may have been missed in class, but are present in the textbook or the instructor's worksheets from class. Before or after the class lecture, the student will use the T.H.I.E.V.E.S. system to summarize the information in the textbook, writing out vocabulary words and definitions, and answering the questions in the back of the chapter, rewriting the questions incorporated into the answer. If the student has any questions from the textbook or lecture notes they need to ask the instructor to expand upon in the next lecture, they can write those in the specific page for that purpose. If the instructor provides specific sources, references, or citations in class, the student can note those on the same page. The pages are placed "oddy" in the layout of the book. This enables the student to open the notebook and have in-class lecture notes face the summary page to avoid having to flip the pages back and forth for information. Textbook study pages are marked with a dark triangle in the top right hand side of the page to help students quickly find textbook-specific note pages in the notebook. Key Words to search for this and similar study notebooks: Academic, Academic aid, Academic notebook, Blank notebook, Class Notebook, Class Organizer, Cornell Notes organizer, Course Organizer, Education, Education & Teaching, Educational Study Aids, Lecture Notes, Lecture Organizer, Notebook, School notebook, Study Aid, Study Aids, Study Guide, Study methods, Study notebook, Language Arts, Study Organizer, Textbook study, Textbook study methods, CORNELL Notes, THEIVES study method, T.H.I.E.V.E.S. study method, College & High School, Study Skills, Workbooks, Test Preparation, Instruction Methods, Subject Notebooks

How the theoretical tools of literacy help us understand programming in its historical, social and conceptual contexts. The message from educators, the tech community, and even politicians is clear: everyone should learn to code. To emphasize the universality and importance of computer programming, promoters of coding for everyone often invoke the concept of "literacy," drawing parallels between reading and writing code and reading and writing text. In this book, Annette Weaver examines the coding-as-literacy analogy and argues that it can be an apt rhetorical frame. The theoretical tools of literacy help us understand programming beyond a technical level, and in its historical, social, and conceptual contexts. Invoking programming from the perspective of literacy and literacy from the perspective of programming, she argues, shifts our understandings of both. Computer programming becomes part of an array of communication skills important in everyday life, and literacy, augmented by programming, becomes more capacious. Weaver examines the ways that programming is linked with literacy in coding literacy campaigns, considering the ideologies that accompany this coupling, and she looks at how both writing and programming encode and distribute information. She explores historical parallels between writing and programming, using the evolution of mass textual literacy to shed light on the trajectory of code from military and government infrastructure to large-scale businesses to personal use. Writing and coding were institutionalized, domesticated, and then established as a basis for literacy. Just as societies demonstrated a "iterate mentality" regardless of the iterate status of individuals, Weaver argues, a "computational mentality" is now emerging even though coding is still a specialized skill.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters.
