The rapidly evolving field of Palliative Care focuses on the management of phenomena that produce discomfort and that undermine the quality of life of patients with incurable medical disorders. The interdisciplinary clinical purview includes those factors - physical, psychological, social, and spiritual - that contribute to suffering, undermine the quality of life, and prevent a death with comfort and dignity. Palliative Care is a fundamental part of clinical practice, the "parallel universe" to therapies directed at cure or prolongation of life. All clinicians who treat patients with chronic life threatening diseases are engaged in palliative care, continually attempting to manage complex symptomatology and functional disturbances. The scientific foundation of palliative care is advancing, and similarly, methods are needed to highlight, for practitioners at the bedside, the findings of empirical research. Topics in Palliative Care Series is divided into sections that address a range of issues. Addressing aspects of symptom control, psychosocial functioning, spiritual or existential concerns, ethics, and other topics, the chapters in each section review the given area and focus on a small number of salient issues for analysis. The authors present and evaluate existing data, provide a context drawn from clinical and research settings, and integrate knowledge in a manner that is both practical and readable. The specific topics covered in Volume 5 are Cultural issues in Palliative Care, Palliative Care in Geriatrics, Communication Issues in Palliative Care, Outcomes Research in Palliative Care, Opioid Tolerance: Reality of Myth?, and Pain and other symptoms: Treatment Challenges.

This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Update: In August 2014, the AAMC selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot.Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings. -Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.
