Babies and Toddlers, 3rd Edition

If you want to learn how to start communicating with your baby before he starts to speak, in easily and funny way, then keep reading. Your baby cries and you can't understand why. Is he hungry? Is he tired? Maybe he dirties his diaper? At birth, toddlers can only use crying as a way of transmitting their needs to others, a sign that is not always easy for adults to understand.

Deciphering the needs of children, in preverbal age, is a need very felt by mothers, who would break down that sense

All human beings use symbolic signs, it just comes naturally to them - For instance, when your baby raises her arms so that he can be lifted, or he points at something that he wants you to get it for him. Montessori Method has been slowly growing in popularity and today, it is considered one of the best approaches to education in young children! The method posits that each child should be approached individually. The focus is not on the learning material itself, but on the learning methods that are different for each child because everyone is unique. Some children are visual and learn better and faster when the subject is presented to them with pictures. Some memorize better when they listen to stories, and some have to solve the problem with a trial and error approach. Your children will benefit enormously from this independent and individual educational method. They will not feel pressured to keep up with their classmates, as every
