Container Logistics and Maritime Transport emphasizes analytical methods and current optimization models to tackle challenging issues in maritime transport and logistics. This book takes a holistic approach to cover all the main segments of the container shipping supply chains to achieve an efficient and effective logistics service system across the entire global transport chain.

Sustainability issues such as social concern and carbon emissions from shipping and ports are also discussed. Each maritime transport segment is addressed using

an approach from qualitative/descriptive analytics to quantitative/prescriptive analytics. Cutting-edge optimization models are presented and explained to tackle various strategic, tactical, and operational planning problems. The book will help readers better understand operations management in global maritime container transport chain. It will also provide practical principles and effective techniques and tools for researchers to push forward the frontiers of knowledge and for practitioners to implement decision support systems. National competitiveness has become a misnomer, as competitiveness is increasingly understood as a regional phenomenon and regions are not confined to the boundaries of the nation state. This book focuses on the Port of Rotterdam and its hinterland – i.e. the Lower Rhine and the Ruhr area. A transnational perspective is imperative to understand the historical trajectories of the port, the hinterland and the region itself.
