This is the story of LSD told by a concerned yet hopeful father, organic chemist Albert Hofmann. He traces LSDs path from a promising psychiatric research medicine to a recreational drug sparking hysteria and prohibition. analyzing electrical brain signals, including data from MEG, EEG, and LFP recordings. This book offers a comprehensive guide to the theory and practice of analyzing electrical brain signals. It explains the conceptual, mathematical, and implementational (via Matlab programming) aspects of time-, time-frequency- and synchronization-based analyses of magnetoencephalography (MEG), electroencephalography (EEG), and local field potential (LFP) recordings from humans and nonhuman animals. It is the only book on the topic that covers both the theoretical

Readers who go through the book chapter by chapter and implement the examples in Matlab will develop an understanding of why and how analyses are performed, how to interpret results, what the methodological issues are, and how to perform single-subject-level and group-level analyses. Researchers who are familiar with using automated programs

Many of the methods presented (including convolution, the Fourier transform, and Euler's formula) are fundamental and form the groundwork for other advanced data analysis methods. Readers who master

Thus, the ISoLA series of events serves the purpose of bridging the gap between designers and developers of rigorous tools, and users in engineering and in other disciplines, and to foster

upon a broad range of qualitative methods, these selected writings from Pelias submerge themselves in the evocative and embodied, in the material and consequential, often creating moving accounts of their topics. The book is divided into four sections: Foundational Logics, Performance, Identity, and Everyday Life. Part I addresses the methodological underpinnings of the book, focusing on the ‘touchstones’ that inform Pelias’ work: performative, autoethnographic, poetic, and narrative methods. These directions push the researcher toward empathic engagement, a leaning toward others; using the literary to evoke the cognitive and

Parts II–IV focus on artistic and everyday life performances, including discussions of the disciplinary shift from the oral interpretation of literature to the field of performance studies; empathy and the actor's process; conceptions of performance; the performance of race, gender, and sexuality; and performances in interpersonal relations and academic circles. By the end, readers will see Pelias demonstrate the power of qualitative methods to engage and to present alternative ways of being. Pelias' work shows us how to understand and feel the evocative

studies as a research method in social psychology, demonstrating that field studies are an important element of contemporary social psychology, and encourages its usage in a methodologically correct and ethical manner. The authors demonstrate that field studies are an important and a much-needed element of contemporary social psychology and that abandoning this method would be at a great loss for the field. Examining successful examples of field studies, including those by Sherif and Sherif, studies of obedience by Hofling, or the studies of stereotypes of the Chinese by LaPiere, they explore the advantages and limitations of the

field study method, whilst offering practical guidance on how it can be used in experiments now and in the future. Covering the history and decline of the field study method, particularly in the wake of the replication crisis, the text argues for the revival the field study method by demonstrating the importance of studying the behaviour of subjects in real life, rather than laboratory conditions. In fact, the results point to certain variables and research phenomena that can only be captured using field studies. In the final section, the authors also explain the methods to follow when conducting field studies, to make sure they are methodologically

Creating an exceptionally student-friendly textbook in psychology isn't just about making the chapters shorter and pages more colorful. It's about using that type of format to provide a clear portrait of psychological science, concise but not oversimplified, all while continually answering the recurring student question:

“What does this have to do with me?”

David Myers' brief introduction to

psychology, *Psychology in Everyday Life*, certainly does offer brief, easily manageable chapters and a colorful, image-rich design (both shaped by extensive research, class testing, and instructor/student feedback). But what makes it such an exceptional text is what flows through those chapters—rich presentations of psychology’s core concepts and field-defining research, examined in context of the everyday lives of all kinds of people around the world and communicated in the captivating storyteller’s voice that is instantly recognizable as Myers’s. The new edition of *Psychology in Everyday Life* offers an extraordinary amount of new research, effective new inquiry-based study tools, and further design innovations, all while maintaining its trademark brevity and clean layout. And it is accompanied by an innovative media/supplements of the same

In *Upsetting Composition Commonplaces*, Ian Barnard argues that composition still retains the bulk of instructional practices that were used in the decades before poststructuralist theory discredited them. While acknowledging that some of the foundational insights of poststructuralist theory can be difficult to translate to the classroom, Barnard upends several especially intransigent tenets that continue to influence the teaching of writing and how students are encouraged to understand writing. Using six major principles of writing

classrooms and textbooks—clarity, intent, voice, ethnography, audience, and objectivity—Barnard looks at the implications of poststructuralist theory for pedagogy. While suggesting some evocative poststructuralist pedagogical practices, the author focuses on diagnosing the fault lines of composition's refusal of poststructuralism rather than on providing "solutions" in the form of teaching templates. *Upsetting Composition Commonplaces* addresses the need to more effectively engage in poststructuralist concepts in composition in an accessible and engaging voice that will advance the conversation about relations

between the theory and teaching of writing.

Since its initial publication, *Writing about Writing* has empowered tens of thousands of students to investigate assumptions about writing and to explore how writing works. It does so by making writing itself the subject of inquiry. Unique to Wardle and Downs' approach, the text presents "threshold concepts" about writing--central ideas that writers need to understand in order to progress. As they come to a deeper understanding of these threshold concepts, students are able to transfer their understanding to any writing situation they encounter. This new edition has been refined

and improved based on input from instructors using the text. Now with more explicit instruction to support academic writers, a new Part One explains the value of investigating writing, introduces threshold concepts and the notion of transfer, details the elements of genre and rhetorical reading, and offers a guide for conducting writing studies research at a level appropriate for undergraduates. The readings chapters have been updated and streamlined, and as in past editions they are supported with introductions, scaffolded questions, and activities. textbook authors to focus on multimedia
composing, Lester Faigley employs his own
advice to engage students in every step of the
writing process - for both college

composition and everyday life - and pulls
back the curtain on how writers work.

rather than a form to be modeled. The text's focus on invention teaches students to recognize the rhetorical elements of any argumentative situation and apply the tools of argument effectively in their own writing. Students are introduced to the basic layers of argument in early chapters, with material arranged into increasingly sophisticated topics beginning with the most obvious or explicit layers (claims) and moving to more implied or “ hidden ” layers (assumptions, values, beliefs, ideology). By the time they finish Part 1, your students will have a thorough understanding of argument, which they can then apply to the invention projects in Chapters 7 – 12.
