

Comprehensive Text Of Psychiatry 8th Edition

This is a spin-off from Stephen M. Stahl's new, completely revised and updated version of his much-acclaimed Prescriber's Guide, covering drugs to treat depression.

This pocket guide is designed to help the primary care practitioner recognize, diagnose, and manage anxiety disorders in a busy clinical practice. It presents an easy-to-follow, step-by-step approach, and offers practical points based on both real patient-care experience and review of current medical literature. The guide includes helpful chapters on psychopharmacology, psychopharmacotherapy, and psychologic treatment for the anxiety disorders.

Rev. ed. of: Foundations of psychiatric mental health nursing / [edited by] Elizabeth M. Varcarolis, Margaret Jordan Halter. 6th ed. c2010.

Handbook of the Biology of Aging, Eighth Edition, provides readers with an update on the rapid progress in the research of aging. It is a comprehensive synthesis and review of the latest and most important advances and themes in modern biogerontology, and focuses on the trend of "big data" approaches in the biological sciences, presenting new strategies to analyze, interpret, and understand the enormous amounts of information being generated through DNA sequencing, transcriptomic, proteomic, and the metabolomics methodologies applied to aging related problems. The book includes discussions on longevity pathways and interventions that modulate aging, innovative new tools that facilitate systems-level approaches to aging research, the mTOR pathway and its importance in age-related phenotypes, new strategies to pharmacologically modulate the mTOR pathway to delay aging, the importance of sirtuins and the hypoxic response in aging, and how various pathways interact within the context of aging as a complex genetic trait, amongst others. Covers the key areas in biological gerontology research in one volume, with an 80% update from the previous edition Edited by Matt Kaeberlein and George Martin, highly respected voices and researchers within the biology of aging discipline Assists basic researchers in keeping abreast of research and clinical findings outside their subsdiscipline Presents information that will help medical, behavioral, and social gerontologists in understanding what basic scientists and clinicians are discovering New chapters on genetics, evolutionary biology, bone aging, and epigenetic control Provides a close examination of the diverse research being conducted today in the study of the biology of aging, detailing recent breakthroughs and potential new directions

The American Psychiatric Association Publishing Textbook of Psychiatry, Seventh Edition

Comprehensive Review of Psychiatry

Massachusetts General Hospital Comprehensive Clinical Psychiatry

Kaplan & Sadock's Concise Textbook of Clinical Psychiatry

A Pocket Guide For Primary Care

Its previous edition hailed as "the best reference for the majority of practicing psychiatrists" (Doody's Book Reviews) and a book that "more than any other, provides an approach to how to think about psychiatry that integrates both the biological and psychological" (JAMA), The American Psychiatric Publishing Textbook of Psychiatry has been meticulously revised to maintain this preeminence as an accessible and authoritative educational reference and clinical compendium. It combines the strengths of its three editors -- Robert Hales in clinical and community psychiatry, Stuart Yudofsky in neuropsychiatry, and new co-editor Glen Gabbard in psychotherapy -- in recruiting outstanding authors to summarize the latest developments in psychiatry and features 101 contributors, 65 of whom are new to this edition. The book boasts a new interior design, with more figures and color throughout to aid comprehension. Each chapter ends with 5-10 key points, 5-10 recommended readings, and helpful Web sites not only for the clinician

but also for patients and family members. The book also includes complimentary access to the full text online. Online benefits include powerful searching, electronic bookmarking, and access by username and password from wherever you have Web access -- especially convenient for times when the print copy of your textbook is not where you are. The online version is accompanied by a downloadable PowerPoint presentation, which contains a wealth of material to enhance classroom presentation, study, and clinical use. Among the improvements to this edition's content:

- Of the text's 44 chapters, 23 either feature new topics or have new authors, making this the most completely revised edition yet.
- New basic-science chapters on cellular and molecular biology of the neuron and on neuroanatomy for the psychiatrist conveniently distill essential information on the biological foundations of psychiatric disorders for clinicians.
- A new chapter on human sexuality and sexual dysfunctions, and another new chapter on treatment of gay, lesbian, bisexual, and transgender patients, equips clinicians to address the entire spectrum of sexual issues and their attendant mental health concerns.
- New chapters on nonpharmacological somatic treatments, supportive psychotherapy, and combination psychotherapy and pharmacotherapy augment the section on psychiatric treatments.
- A new chapter on the assessment of dangerousness -- an individual's propensity to commit violent acts -- presents helpful guidelines for appropriately evaluating and minimizing the risk of violence in both outpatient and inpatient settings.

Why The American Psychiatric Publishing Textbook of Psychiatry will be your first choice among comprehensive psychiatry textbooks:

- Complimentary Access to the Full Text Online -- Online benefits include powerful searching, electronic bookmarking, and download to PDA.
- PowerPoint Presentation -- Online version is accompanied by a downloadable PowerPoint presentation, which contains a wealth of material to help you enhance classroom presentation, study, and in clinical use.
- Self-Assessment -- An interactive online Self-Assessment allows you to assess your knowledge of each chapter, with links back to the textbook when more study is needed.
- Summary Points -- Each chapter ends with 5-10 key points, 5-10 recommended readings, and helpful web sites not only for the clinician but also for referral to patients and family members.
- Co-Editor Glen O. Gabbard, M.D. -- As the third Co-Editor, Dr. Gabbard adds depth and perspective to psychotherapeutic approaches.
- Chapter Authors -- Partnership of senior and junior faculty brings fresh insights tempered by wisdom and experience.
- Peer-Reviewed -- Rigorously peer reviewed and updated to reflect the rapidly changing profession.
- Disclosure of Interest Statements -- Disclosure from each chapter author assures you that potential biases have been removed.
- Comprehensive But Concise -- Inclusion of essential information eases information overload.
- Better Layout -- Larger type for text makes book easier to read and color figures are provided throughout the text. It's no wonder that this text has established itself as both a leading scholarly reference and an indispensable clinical resource. The American Psychiatric Publishing Textbook of Psychiatry is a

proven teaching tool and an essential component of every practitioner's library.

Principles and Practice of Psychiatric Nursing, 8th Edition provides comprehensive coverage of psychiatric nursing. Beginning with fundamental coverage of all key psychiatric nursing principles, it goes on to address the complete continuum of care - including mental health promotion and illness prevention, crisis intervention, and psychiatric rehabilitation and recovery. The book then applies psychiatric nursing principles to specific clinical disorders based on adaptive-maladaptive coping responses, the six-step nursing process, and DSM-IV-TR and NANDA diagnoses. Subsequent chapters describe various modalities of treatment (psychopharmacology, somatic therapies, cognitive and behavioral therapies, managing aggressive behavior, and more), hospital-based and community-based care, and treatment of special populations. The Stuart Stress Adaptation Model provides a consistent nursing-oriented framework for understanding health and wellness. Evidence-based algorithms are presented in lieu of the less relevant critical pathways found in other texts. The latest American Nurses Association's Standards of Care prepare students for the realities of evidenced-based care in nursing practice. A vibrant, full-color design enhances and enriches students' understanding of essential concepts. Short vignettes in a patient's and family's own words give readers a different perspective of the caregiving process. Case studies present in-depth clinical scenarios that show each step of the nursing process, demonstrating realistic applications of the nursing process. Critical thinking questions interspersed throughout the text encourage independent clinical reasoning. Numerous boxes and tables throughout the book highlight important issues and current topics related to chapter content in visual, easy-to-digest segments. Citing the Evidence boxes provide summaries of recent clinical research, with new boxes added to the Evolve website each month. Nursing Treatment Plan Summaries present care plans, including patient goals with nursing interventions and rationales, to guide nursing care related to the treatment of major disorders. Patient Education Plans and Family Education Plans include key information nurses need to communicate to the patient and family members. Sample Therapeutic Dialogues for nurse-patient interactions demonstrate the difference between therapeutic and nontherapeutic communication. Clinical chapters have been carefully revised and updated to include the latest research and appropriate nursing and medical diagnoses relevant to each disorder. A strengthened family focus and more in-depth discussion of outpatient care reflect current trends in psychiatric nursing. NIC and NOC are introduced in the nursing process chapter (chapter 12) and incorporated as appropriate into disorders chapters. Chapter Focus Points at the end of each chapter provide a comprehensive review of important information. Key terms are defined in the glossary and listed with page references at the end of the chapter in which they appear. A comprehensive list of behavioral rating scales is offered as an appendix for easy reference. A companion CD-ROM offers

animations, interactive exercises, review questions for the NCLEX examination, and an audio glossary for additional study and review. A companion CD-ROM offers animations, interactive exercises, review questions for the NCLEX examination, and an audio glossary for additional study and review. New chapters explore the latest trends and relevant topics, including: Families as Resources, Caregivers, and Collaborators (Chapter 11); Family Interventions (Chapter 33) Community-Based Psychiatric Nursing Care (Chapter 35); and Psychological Care of Patients with Life Threatening Illness (Chapter 40).

The Oxford Textbook of Suicidology is the most comprehensive textbook on suicidology and suicide prevention that has ever been published. It is written by world-leading specialists and describes all aspects of suicidal behaviour and suicide prevention, including psychological, cultural, biological, and sociological factors.

A thoughtful, portable clinical companion, Varcarolis' Manual of Psychiatric Nursing Care Planning: An Interprofessional Approach, 6th Edition, provides you with the latest diagnostic information available, including the DSM-5 and patient problems, for accurate assessment and diagnosis of patients. This clinically-based guide offers quick and easy access to the latest psychiatric nursing care planning guidelines for a range of settings including the inpatient unit, home care, or community mental health setting. Designed to accompany Foundations of Psychiatric-Mental Health Nursing, the refreshed and updated edition is a perfect reference for learning to create psychiatric nursing care plans. A thoroughly revised patient centered assessment, including the DSM-5, supplies you with the latest diagnostic information available for accurate assessment and diagnosis of patients. The latest patient problems, assessment and treatment strategies, and psychotropic drug information keep you up-to-date with the most current information. Care plans containing patient problems, etiology, assessment findings/diagnostic cues, outcome criteria, long- and short-term goals, and interventions and rationales offer plans of care for a wide range of psychiatric nursing diagnoses. Talk-based therapies covered and referred to in a dedicated chapter on psychotherapeutic models. Promising brain stimulation therapies are addressed in a separate chapter NEW! A separate sleep disorder chapter addresses alterations present in all psychiatric disorders. NEW! Updated medications equip you with the latest information on medications used with psychiatric patients. NEW! Updated, refreshed, and refined Manual improves overall design and reduces extraneous content to focus on essential clinical information.

The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition

Abnormal Psychology: An Integrative Approach

Handbook of the Biology of Aging

Psychiatric Mental Health Nursing, 8th Ed. +Psychiatric Nursing, 9th Ed.

Handbook of Clinical Psychopharmacology for Therapists

Varcarolis' Foundations of Psychiatric-Mental Health Nursing, 8th Edition is the

most comprehensive RN psychiatric nursing text on the market! Awarded second place in the 2018 AJN Book of the Year Awards in Psychiatric Mental Health Nursing category. User-friendly by design, it simplifies the often-intimidating subject of psychiatric-mental health nursing with a practical, clinical perspective. This edition was revised in conjunction with a readability expert to support clarity and ease of understanding. Chapters follow the nursing process framework and progress from theory to application, preparing your students for clinical practice with real-world examples. New to this edition are full-page illustrated explanations about the neurobiology of disorders and associated medications, criteria from the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5) for major disorders, completely revised Evidence-Based Practice boxes, and a fully rewritten chapter on Dying, Death, and Grieving to provide students with essential information about difficult topics. Mentor-like writing style reinforces important information and helps in applying textbook content to the clinical setting. Coverage of key topics and emerging nursing trends keep you current with best practices in the field. Considering Culture boxes discuss the importance of person-centered care in providing competent care to diverse populations in various clinical situations. Vignettes with vivid mini-stories prepare you for real-world practice with personal, descriptive characterizations of patients with specific psychiatric disorders. Health Policy Boxes introduce the role you can play in advocating for patients and the profession. Clinical chapters follow the six-step nursing process, providing consistent guidelines for comprehensive assessment and intervention. NEW! Full-page illustrated explanations about the neurobiology of disorders and associated medications. NEW! DSM-5 guidelines from the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders are fully incorporated in the text, and include updated NANDA content. NEW! Completely revised Evidence-Based Practice boxes. NEW! Revised chapter on Dying, Death and Grieving gives you all the vital information you need. NEW! Ten NCLEX-style questions and answers at the end of each chapter.

Preceded by American Psychiatric Publishing textbook of psychiatry / edited by Robert E. Hales, Stuart C. Yudofsky, Laura Weiss Roberts. Sixth edition. 2014. Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice,

with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Varcarolis' Foundations of Psychiatric Mental Health Nursing
A Clinical Approach

The American Psychiatric Publishing Textbook of Psychiatry

Widely recognised as the standard text for trainee psychiatrists, the Shorter Oxford Textbook of Psychiatry stands head and shoulders above the competition. The text has been honed over five editions and displays a fluency, authority and insight which is not only rarely found but makes the process of assimilating information as smooth and enjoyable as possible. The book provides an introduction to all the clinical topics required by the trainee psychiatrist, including all the sub-specialties and major psychiatric conditions. Throughout, the authors emphasize the basic clinical skills required for the full assessment and understanding of the patient. Discussion of treatment includes not only scientific evidence, but also practical problems in the management of patients their family and social context. The text emphasizes an evidence-based approach to practice and gives full attention to ethical and legal issues. Introductory chapters focus on recognition of signs and symptoms, classification and diagnosis, psychiatric assessment, and aetiology. Further chapters deal with all the the major psychiatric syndromes as well as providing detailed coverage of pharmacological and psychological treatments. The book gives equal prominence to ICD and DSM classification - often with direct comparisons - giving the book a universal appeal. The Shorter Oxford Textbook of Psychiatry remains the most up-to-date secondary level textbook of psychiatry available, with the new edition boasting a new modern design and greater use of summary boxes, tables, and lists than ever before. The extensive bibliography has been brought up-to-date and there are targeted reading lists for each chapter. The Shorter Oxford Textbook of Psychiatry fulfils all the study and revision needs of psychiatric trainees, but will also prove useful to medical students, GPs, qualified psychiatrists, and those in related fields who need to be kept informed with current psychiatric practice.

Basic Neurochemistry: Principles of Molecular, Cellular, and Medical Neurobiology, the outstanding and comprehensive classic text on neurochemistry, is now newly updated and revised in its Eighth Edition. For more than forty years, this text has been the worldwide standard for information on the biochemistry of the nervous system, serving as a resource for postgraduate trainees and teachers in neurology, psychiatry, and basic neuroscience, as well as for medical, graduate, and postgraduate students and instructors in the neurosciences. The text has evolved, as intended, with the science. It is also an excellent source of current information on basic biochemical and cellular processes in brain function and neurological diseases for continuing medical education and qualifying examinations. This text continues to be the standard reference and textbook for exploring the translational nature of neuroscience, bringing basic and clinical neuroscience together in one authoritative volume. Our book title reflects the expanded attention to these links between neurochemistry and neurologic disease. This new edition continues to cover the basics of neurochemistry as in the earlier editions, along with expanded and additional coverage of new research from: Intracellular trafficking; Stem cells, adult neurogenesis, regeneration; Lipid messengers; Expanded coverage of all major neurodegenerative and psychiatric disorders; Neurochemistry of addiction; Neurochemistry of pain; Neurochemistry of hearing and balance; Neurobiology of learning and memory; Sleep; Myelin structure, development, and disease; Autism; and Neuroimmunology. Completely updated text with new authors and material, and many entirely new chapters Over 400 fully revised figures in splendid color 61 chapters covering the range of cellular, molecular and medical neuroscience Translational science boxes emphasizing the connections between basic and clinical neuroscience Companion website at <http://elsevierdirect.com/companions/9780123749475>

Compact and easy to use, Kaplan & Sadock's Concise Textbook of Clinical Psychiatry, Fourth Edition is an authoritative, affordable text that provides must-know information in clinical psychiatry. Containing the most relevant clinical material from the best-selling Kaplan and Sadock's Synopsis of Psychiatry, Eleventh Edition, it offers step-by-step guidance on the clinical examination, the psychiatric report, medical assessment of the psychiatric patient, laboratory tests, and signs and symptoms, as well as all psychiatric and substance-related disorders, with special chapters on children, adolescents, and the elderly. It also covers special topics such as emergency psychiatry, forensic psychiatry, ethics, and palliative and end-of-life care.

The prevalence of psychiatry in popular culture has coincided with the rise of amateur "armchair" psychiatrists -- and this often serves to muddy the waters about what, exactly, the field entails. For all the misconceptions, though, psychiatry is an endlessly fascinating field, charged with defining and recognizing mental illnesses, identifying methods for treating them, and discovering their causes and developing measures to prevent them. Introductory Textbook of Psychiatry dispels common misunderstandings and delves into what makes this such an exciting discipline. Now in its seventh edition, this bestselling guide is organized along the lines of DSM-5® and has been updated to reflect changes to the manual, including new medications and therapies. Rigorous in scope, Introductory Textbook of Psychiatry is nevertheless accessible and conversational in tone. It employs fascinating case vignettes, clinical pearls, self-assessment questions, and tables and figures as it offers a summary of: The DSM-5® diagnostic system The neurobiological basis of psychiatry Interviewing and

assessment -- including specific questions that patients can be asked The various psychiatric disorders Legal issues Psychiatric emergencies Treatment Initially developed for medical students and beginning residents, this guide is also a valuable reference for nurse practitioners, physician assistants, social workers, and psychologists. And because it has been edited to align with the Pocket Guide to Psychiatric Practice, it makes an excellent companion piece to that volume, as well.

The Prescriber's Guide, Antidepressants

Companion to Psychiatric Studies

Basic Neurochemistry

Vancouver's Manual of Psychiatric Nursing Care Planning

A Practical Focus on the Skills and Concepts Essential to Your Success With an accessible, clear and student-friendly approach, Psychiatric-Mental Health Nursing clarifies challenging concepts and helps you build a foundation for working successfully with clients experiencing mental health challenges regardless of care setting. The text explores the full spectrum of psychiatric nursing, helping you master specific nursing interventions, hone your therapeutic communication skills and learn to apply content effectively within the framework of the nursing process. New! Unfolding Patient Stories written by the National League for Nursing put the nursing process in a realistic context to prepare you for successful client interactions and interventions. Clinical Vignettes familiarize you with the features of major disorders you are likely to encounter in practice. Therapeutic Dialogues help you perfect your communication skills with specific examples of nurse-client interactions. Best Practice boxes provide the latest evidence-based findings in psychiatric nursing. Self-Awareness features foster your personal and professional development through self-reflection. Concept Mastery Alerts clarify important concepts essential to your classroom and clinical success. Watch and Learn icons point you to corresponding true-to-life Lippincott® Theory to Practice Video Series videos for a richer understanding of important mental health disorders. Built-In Study Guide reinforces your understanding with multiple-choice questions, multiple-response questions and clinical examples at the end of each chapter. Nursing Care Plans demonstrate effective approaches for addressing specific client disorders. Drug Alerts highlight essential concerns related to psychotropic drugs. Warning boxes alert you to FDA considerations for specific medications. Cultural Considerations help you ensure culturally sensitive care for a wide range of client populations. Elder Considerations sections prepare you to care for the growing population of older adults. Client/Family Education boxes boost your teaching capabilities. Nursing Interventions detail key treatment strategies for specific disorders. DSM-5 Diagnostic Criteria boxes summarize the medical diagnostic features of specific disorders.

Derived from a popular review course for residents and fellows at Yale University's Department of Psychiatry, this comprehensive question-and-answer

review book will prepare resident and practicing psychiatrists for all types of standardized examinations, including the PRITE, the American Board of Psychiatry and Neurology written exam, and recertification exams. The book contains 2,000 multiple-choice questions divided into ten 200-question tests, and each test covers all psychiatry and neurology topics in the ABPN curriculum. An answer section with complete answers, explanations, and references for further review follows each test. All of the questions will be available on a companion Website, so that readers can take the tests online.

Assessment Guides, Diagnoses, Psychopharmacology

Oxford Textbook of Suicidology and Suicide Prevention

Kaplan and Sadock's Concise Textbook of Clinical Psychiatry

Kaplan & Sadock's Pocket Handbook of Clinical Psychiatry

Oxford Handbook of Psychiatry

Thoroughly updated for its Third Edition, this popular quick-reference handbook remains a staple for medical students on psychiatric rotations as well as psychiatric residents and practitioners. In an easy-to-scan outline format, the book presents the etiology, epidemiology, clinical characteristics, and treatment of all psychiatric disorders. Additional chapters cover the psychiatric examination, special populations, psychotherapy, biological therapies, medication-induced movement disorders, legal issues, and laboratory tests. The book is replete with tables and includes color photographs of psychiatric drugs. Each chapter ends with suggestions for further reading, which include cross-references to specific page numbers in Kaplan and Sadock's Comprehensive Textbook of Psychiatry, Seventh Edition.

The new sixth edition -- the only comprehensive psychiatry textbook to integrate all the new DSM-5(R) criteria -- provides the most up-to-date, authoritative, insightful foundational text in the field. Its contributors include authors of the definitive texts in their areas of specialization.

*This trusted practitioner resource and course text is grounded in James Morrison's experience with more than 15,000 mental health patients. Morrison provides a complete framework for interviewing adult patients about their current symptoms, personal and family history, mental status, behavioral risks, and other relevant issues. He offers guidance for selecting the best strategy for any clinical situation, building rapport, overcoming common challenges, and communicating findings. Appendices include a detailed semistructured interview and a self-assessment tool for interviewers, both with permission to photocopy. Purchasers also get access to a Web page where they can download and print the reproducible materials in a convenient 8 1/2" x 11" size. New to This Edition *Revised throughout for DSM-5. *Updated resources and suggested readings. See also Morrison's DSM-5? Made Easy, which explains DSM-5 diagnoses in clear language, illustrated with vivid case vignettes; Diagnosis Made Easier, Second Edition, which offers principles and decision trees for integrating diagnostic information from multiple sources; and The Mental Health Clinician's Workbook, which uses in-depth cases and carefully constructed exercises to build the reader's diagnostic skills.*

Accurate, reliable, objective, and comprehensive, Kaplan & Sadock's Synopsis of Psychiatry has long been the leading clinical psychiatric resource for clinicians, residents, students, and other health care professionals both in the US and worldwide. Now led by a new editorial team of Drs. Robert Boland and Marcia L. Verduin, it continues to offer a trusted overview of the entire field of psychiatry while bringing you up to date with current information on key topics and developments in this complex specialty. The twelfth edition has been completely reorganized to

make it more useful and easier to navigate in today's busy clinical settings.
Varc Carolis' Foundations of Psychiatric-Mental Health Nursing - Binder Ready
Principles of Molecular, Cellular, and Medical Neurobiology
Anxiety Disorders
Shorter Oxford Textbook of Psychiatry
Kaplan & Sadock's Synopsis of Psychiatry

This is a thorough revision and updating of the extremely successful third edition. As in previous editions, the following three perspectives are considered in depth: experimental cognitive psychology; cognitive science, with its focus on cognitive modelling; and cognitive neuropsychology with its focus on cognition following brain damage. In addition, and new to this edition, is detailed discussion of the cognitive neuroscience perspective, which uses advanced brain-scanning techniques to clarify the functioning of the human brain. There is detailed coverage of the dynamic impact of these four perspectives on the main areas of cognitive psychology, including perception, attention, memory, knowledge representation, categorisation, language, problem-solving, reasoning, and judgement. The aim is to provide comprehensive coverage that is up-to-date, authoritative, and accessible. All existing chapters have been extensively revised and re-organised. Some of the topics receiving much greater coverage in this edition are: brain structures in perception, visual attention, implicit learning, brain structures in memory, prospective memory, exemplar theories of categorisation, language comprehension, connectionist models in perception, neuroscience studies of thinking, judgement, and decision making. Cognitive Psychology: A Students Handbook will be essential reading for undergraduate students of psychology. It will also be of interest to students taking related courses in computer science, education, linguistics, physiology, and medicine.

Handbook of Clinical Psychopharmacology for Therapists has become the go-to resource for mental health clinicians looking for clear, reliable information about the treatment of mental health issues. Organized by disorder and, within each disorder, by medication, this book is designed to familiarize clinicians and students with the basic terminology and models of pharmacokinetics. This updated seventh edition provides essential information on new medications and treatment options and includes the latest research on side effects, contraindications, and efficacy of all major medications prescribed for mental health disorders. The book also features

an important new chapter on the effects of withdrawing from psychopharmacological medications. This handbook makes it simple to: Get the facts about drug interactions and side effects Find out how medications affect adults, children, and adolescents differently Learn how different cultures view medical treatment, vital information for anyone who treats clients from a variety of backgrounds Discontinue medication safely when needed

Balancing biological, psychological, social, and cultural approaches, this book's ground-breaking integrative approach is the most modern, scientifically valid method for studying abnormal psychology. Updated with leading-edge research findings, the eighth edition draws on the expertise of David H. Barlow, V. Mark Durand, and Stefan G. Hofmann, three internationally recognized experts in clinical psychology. In ABNORMAL PSYCHOLOGY: AN INTEGRATIVE APPROACH, the authors successfully blend sophisticated research with an accessible, engaging writing style. They go beyond simply describing different schools of thought on psychological disorders, exploring the interactions of the various forces that contribute to psychopathology. This comprehensive resource includes integrated case studies (95 percent from the authors' own files) and additional study tools. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The Massachusetts General Hospital is widely respected as one of the world's premier psychiatric institutions. Now, preeminent authorities from MGH present the newly updated edition of Massachusetts General Hospital Comprehensive Clinical Psychiatry, a unique medical reference book that continues to simplify your access to the current clinical knowledge you need - both in print and online! It provides practical approaches to a wide variety of clinical syndromes and settings, aided by stunning graphics and hundreds of questions and answers geared to each chapter. You'll have convenient access to all the authoritative answers necessary to overcome any clinical challenge. User-friendly, highly templated organization with abundant boxed summaries, bulleted points, case histories, algorithms, references, and suggested readings. Peerless, hands-on advice from members of the esteemed MGH Department of Psychiatry helps you put today's best approaches to work for your patients. Interactive and downloadable Q&As for each chapter allow you to test

your retention of the material covered. In-depth coverage of many unique areas, including Psychiatric and Substance Use Disorders in Transitioning Adolescents and Young Adults; Neuroanatomical Systems Relevant to Neuropsychiatric Disorders; Legal and Ethical Issues in Psychiatry; Military Psychiatry; and Approaches to Collaborative Care and Primary Care Psychiatry. Features full, new DSM-5 criteria; new art, tables, and key points; and new Alzheimer's Disease guidelines. Highlights recent developments in the field, such as neurotherapeutics, new psychotropics, military psychiatry, collaborative care, ensuring your knowledge is thoroughly up to date. Expert Consult eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, and references from the book on a variety of devices.

Varcarolis' Foundations of Psychiatric-Mental Health Nursing - E-Book

Concepts of Care in Evidence-Based Practice

Psychiatric Mental Health Nursing

Introductory Textbook of Psychiatry

Kaplan & Sadock's Study Guide and Self-Examination Review in Psychiatry

A comprehensive textbook for candidates for postgraduate psychiatry exams, covering both basic sciences and the practice of psychiatry.

"This study guide is an excellent aid in preparing for boards and other psychiatry exams and in reinforcing your knowledge. It offers chapter overviews of Synopsis, Tenth Edition and over 1,600 multiple-choice questions with discussions of correct and incorrect answers"--Provided by publisher.

"The Kaplan and Sadock series comes in a matryoshka dolls assortment of sizes. As the title implies, the Concise textbook is one of the briefer in the series"--The Oxford Handbook of Psychiatry is directed at medical students, doctors coming to psychiatry for the first time, psychiatric trainees, and other professionals who may have to deal with patients with psychiatric problems. It is written by a group of experienced psychiatrists and is designed to provide easy access to the information required by psychiatry trainees on the wards or on-call. It closely follows the familiar format of the other Oxford Handbooks, and provides coverage that is comprehensive, evidence based and practical. The content of the handbook is written in the concise, note-based style characteristic of the series, with single topics confined to single pages.

Principles and Practice of Psychiatric Nursing

Clinical Neurology for Psychiatrists

Psychology 2e

The American Psychiatric Association Publishing Textbook of

Psychopharmacology

The American Psychiatric Association Publishing Textbook of Psychopharmacology is an indispensable and comprehensive resource for clinicians and trainees who prescribe psychotropic medications. Updated to reflect the new DSM-5 classification, this revised Fifth Edition maintains the user-friendly structure of its predecessors while offering in-depth coverage of the latest research in pharmacological principles, classes of drugs, and psychiatric disorders. Introductory chapters provide a theoretical grounding in clinical applications, with topics ranging from neurotransmitters to brain imaging in psychopharmacology. The bulk of the book is devoted to various classes of drugs, including antidepressants, anxiolytics, antipsychotics, mood stabilizers, and other agents, with each class divided into chapters on specific drugs -- either new or revised to include the latest findings and trends. Finally, the section on psychopharmacological treatment addresses evidence-based principles of clinical care for the full spectrum of mental disorders and conditions -- from depression to chronic pain -- as well as for specific populations and circumstances -- from children and adolescents to psychiatric emergencies -- offering information on topics such as medication selection, combination and maintenance dosing regimens, monitoring and management of side effects, and strategies for optimizing treatment response. The book's beneficial features are many: The section on principles of pharmacology has been revised and reorganized to incorporate recent discoveries from the fields of neurobiology, genetics, brain imaging, and epidemiology. History and discovery, structure--activity relationships, pharmacological profiles, pharmacokinetics and disposition, mechanisms of action, indications and efficacy, side effects and toxicology, and drug--drug interactions are addressed for each agent. This consistent structure places the desired information at the clinician's fingertips and facilitates study for trainees. Coverage of drugs approved since the last edition is thorough, encompassing new antidepressants (e.g., vortioxetine), new antipsychotics (e.g., cariprazine), and agents on the clinical horizon (e.g., ketamine). More than 180 tables and graphs present critically important data in an accessible way. A work of uncommon scientific rigor and clinical utility, The American Psychiatric Association Publishing Textbook of Psychopharmacology provides state-of-the-art information on both the principles and the practice of psychopharmacological treatment of psychiatric disorders.
