TRB&E™'s National Cooperative Highway Research Program (NCHRP) Research Report 838: Guidelines for Optimizing the Risk and Cost of Materials QA Programs proposes guidelines for optimizing the risk and cost of materials quality assurance (QA) programs. It develops a methodology for establishing a materials QA program that optimizes risk and cost by providing

testing and inspection for transportation projects across their full range of type, size, complexity, and project-delivery method.

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the

questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

Advances in trenchless pipe rehabilitation have been leaping forward in giant steps for the past twenty years. Because of its economical and technical efficiency, the pipe bursting method arouses great interest. This book introduces the technology of pipe rehabilitation by means of the pipe bursting method, provides extensive examples from practice and assists network owners, consulting engineers,

planners and users in their every-day practice of specifying, tendering and performing pipe bursting projects.

The introduction of the New Engineering Contract (NEC) encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form. The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract. It is believed that these features reduce adversariality and disputes.

The NEC seeks to achieve this aim primarily through co-operative management techniques and incentives built into the NEC's procedures. This commentary analyses and evaluates these and related claims of innovation. The New Engineering Contract: A legal commentary examines the background to the NEC, its design objectives, structure, procedures and likely judicial

interpretation to determine whether it improves upon the traditional standard forms of contract. Special attention is given in the commentary to the development and the significance of the principles underlying preparation of the NEC as well as the arguments in favour of and against them. Throughout the detailed commentary upon the NEC clauses comparisons to the traditional

forms are also made to highlight unique features and principles of general application. The conclusion reached is that the NEC does make a significant contribution to the development of standard forms of contract, addresses many of their short comings and offers one of the best models for their future development, direction and design. The commentary draws upon the body of

the project management literature and legal analysis to support its conclusions. The New Engineering Contract: A legal commentary will be essential reading for lawyers, barristers and solicitors, as well as engineers and project managers.
