A New York Times Notable Book The inspiration for PBS's AMERICAN EXPERIENCE film The Poison Squad. From Pulitzer Prize winner and New York Times-bestselling author Deborah Blum, the dramatic true story of how food was made safe in the United States and the heroes, led by the inimitable Dr. Harvey Washington Wiley, who fought for change By the end of nineteenth century, food was dangerous. Lethal, even. "Milk" might contain formaldehyde, most often used to embalm corpses. Decaying meat was preserved with both salicylic acid, a pharmaceutical chemical, and borax, a compound first identified as a cleaning product. This was not by accident: food manufacturers had rushed to embrace the rise of industrial chemistry, and were knowingly selling harmful products. Unchecked by government regulation, basic safety, or even labelling requirements, they put profit before the health of their customers. By some estimates, in New York City alone, thousands of children were killed by "embalmed milk" every year. Citizens--activists, journalists, scientists, and women's groups--began agitating for change. But even as protective measures were enacted in Europe, American corporations blocked even modest regulations. Then, in 1883, Dr. Harvey Washington Wiley, a chemistry professor from Purdue University, was named chief chemist of the agriculture department, and the agency began methodically investigating food and drink fraud, even conducting shocking human tests on groups of young men who came to be known as, "The Poison Squad." Over the next thirty years, a titanic struggle took place, with the courageous and fascinating Dr. Wiley campaigning indefatigably for food safety and consumer protection. Together with a gallant cast, including the muckraking reporter Upton Sinclair, whose fiction revealed the horrific truth about the Chicago stockyards; Fannie Farmer, then the most famous cookbook author in the country; and Henry J. Heinz, one of the few food producers who actively advocated for pure food, Dr. Wiley changed history. When the landmark 1906 Food and Drug Act was finally passed, it was known across the land, as "Dr. Wiley's Law." Blum brings to life this timeless and hugely satisfying "David and Goliath" tale with righteous verve and style, driving home the moral imperative of confronting corporate greed and government corruption with a bracing clarity, which speaks resoundingly to the enormous social and political challenges we face today.

He wrote of the satisfactions of providing for themselves, without electricity, and about the pleasures of their leisure - painting, writing, reading, and playing music. He wrote rapturously about the river, the seasons, and the landscape. But in matters of human relations Harlan was emotionally reticent, and he wrote little about Anna." The questions that readers of Harlan's books have always asked about Anna have gone unanswered, and the story of her life has been untold - until now."

You don't have to be a student of A Course in Miracles to appreciate the relationship and situational challenges expressed in these poems by Brian. His wife, Gabriela, and daughter Alzena form a triangle of conscious direction with Brian to return home. They are ordinary people with ordinary lessons of forgiveness. His poems deal with: healing special, up-close relationships, falling off the success ladder, past lives popcorn, surefire stock options expiring worthless, boomer ageing/raging, the professor of too much truth telling, dupe-licating our parents, the halo effect, "above the battleground" in marriage, even ten short auto poems, thoughts while driving, and stoned out of you. What is not ordinary is applying what Gary Renard calls quantum forgiveness, seeing the other(s) and ourselves as totally innocent and guiltless . . . so different than the ego's habitual denial and external projection! Then turning it over to Holy Spirit, our inner teacher, to show us the truth so that we can change our mind's thinking from separation to connection and union. "Remember, kindness created you kind." "Disability rights activist Alice Wong brings tough conversations to the forefront of society with this anthology. It sheds light on the experience of life as an individual with disabilities, as told by none other than authors with these life experiences. It's an eye-opening collection that readers will revisit time and time again." —Chicago Tribune One in five people in the United States lives with a disability. Some disabilities are visible, others less apparent—but all are underrepresented in media and popular culture. Activist Alice Wong brings together this urgent, galvanizing collection of contemporary essays by disabled people, just in time for the thirtieth anniversary of the Americans with Disabilities Act. From Harriet McBryde Johnson's account of her debate with Peter Singer over her own personhood to original pieces by authors like Keah Brown and Haben Girma; from blog posts, manifestos, and eulogies to Congressional testimonies, and beyond; this anthology gives a glimpse into the rich complexity of the disabled experience, highlighting the passions, talents, and everyday lives of this community. It invites readers to question their own understandings. It celebrates and documents disability culture in the now. It looks to the future and the past with hope and love.

Oil palms are ubiquitous—grown in nearly every tropical country, they supply the world with more edible fat than any other plant and play a role in scores of packaged products, from lipstick and soap to margarine and cookies. And as Jonathan E. Robins shows, sweeping social transformations carried the plant around the planet. First brought to the Americas by Spanish slave ships, palm oil became a quintessential commodity in the Industrial Revolution. Imperialists hungry for cheap fat subjugated Africa's oil palm landscapes and the people who worked them. In the twentieth century, the World Bank promulgated oil palm agriculture as a panacea to rural development in Southeast Asia and across the Pacific. As companies tore into rainforests, evicting farmers in the name of progress, the oil palm continued its rise to dominance, sparking new controversies over trade, land and labor rights, human health, and the environment. By telling the story of the oil palm across multiple centuries and continents, Robins demonstrates how the fruits of an African commodity in the story of global capitalism, beginning in the eras of slavery and imperialism, persisting through decolonization, and stretching to the present day.

All choices have consequences; some very little, while others reach through the years and affect the lives of subsequent generations. Where the Mockingbird Sang, set in the Arkansas Ozarks before, during, and after the Civil War is an intriguing tale of lust, war, capture and imprisonment, escape, betrayal, family, and the ability of good and love to triumph over the horrors of war. Evans Atwood is a warrior in the Confederate Army who serves with honor. Through him the story of so many who gave their hearts and sacrificed so much dear to them to be able to provide and protect freedom and their right to self determination comes to life. These men and women are forever changed as are those who are left behind to suffer other horrors and evil that war brings. Evans teaches school at the Primitive Baptist Church in Shiloh, Arkansas where he meets Lucy Jane Roberts, a beautiful transplant from eastern Tennessee. With her beauty and her designs on a better life, she sweeps him along a course that will change his life and the lives of all around him. Due to Lucy's seduction of Evans, and the resulting pregnancy, he chooses her over his lifelong friend, neighbor, and love, Susan Wilson. All is well with the young couple until the challenges of war come into their lives. Evans and his wandering, older, back woods friend, Nathaniel James Buchanan or Buck, are certain, as are soldiers on both sides of the conflict that the war will only last a few months. Evans leaves Lucy Jane with eighteen month old Martha Jane and six week old James Calvin when he and Buck enlist in the 15th Arkansas Infantry to secure the freedoms they long for.

This book examines recent progress in the development and application of optical polymers, molecular crystals, crystals in liquids and liquid crystals. The accomplishment of a high macroscopic polarization is a key issue throughout which transcends the design and performance criteria of optical materials. The chapters included in this volume focus on orientation order and the achievement of macroscopic polarizations.

**Darwin has long been hailed as forefather to behavioural science, especially nowadays, with the growing popularity of evolutionary psychologies. Yet, until now, his contribution to the field of psychology has been somewhat understated. This is the first book ever to examine the riches of what Darwin himself wrote about psychological matters. It unearths a Darwin new to contemporary science, whose first concern is the agency of organisms – from which he derives both his psychology, and his theory of evolution. A deep reading of Darwin's writings on climbing plants and babies, blushing and bower-birds, worms and facial movements, shows that, for Darwin, evolution does not explain everything about human action. Group-life and culture are also keys, whether we discuss the dynamics of conscience or the dramas of desire. Thus his treatment of facial actions sets out from the anatomy and physiology of human facial movements, and shows how these gain meanings through their recognition by others. A discussion of blushing extends his theory to the way reading others' expressions rebounds on ourselves – I care about how I think you read me. This dynamic proves central to how Darwin understands sexual desire, the production of conscience and of social standards through group dynamics, and the role of culture in human agency. Presenting a new Darwin to science, and showing how widely Darwin's understanding of evolution and agency has been misunderstood and misrepresented in biology and the social sciences, this important new book lights a new way forward for those who want to build psychology on the foundation of evolutionary biology**

In this vibrant work, which is ideal for both teaching and learning, Apoorva Khare and Anna Lachowska explain the mathematics essential for understanding and appreciating our quantitative world. They show with examples that mathematics is a key tool in the creation and appreciation of art, music, and literature, not just science and technology. The book covers basic mathematical topics from logarithms to statistics, but the authors eschew mundane finance and probability problems. Instead, they explain how modular arithmetic helps keep our online transactions safe, how logarithms justify the twelve-tone scale commonly used in music, and how transmissions by deep space probes are similar to knights serving as messengers for their traveling prince. Ideal for coursework in introductory mathematics and requiring no knowledge of calculus, Khare and Lachowska's enlightening mathematics tour will appeal to a wide audience.
