

Core Clinical Cases Questions And Answers In Medical Ethics

Each case prompts candidates to decide on the necessary investigations, set their own research objectives and direct their own learning. This book mirrors the format of 'Medical School and Foundation Year Assessment' so that candidates get familiar with what is expected of them.

Integrates the students' knowledge of basic science with the realities of managing clinical problems. This title includes 36 clinical cases, addressing the major body system areas; learning points which are designed to give a rounded explanation of the topic; and, model answers and marking schemes.

This title is directed primarily towards health care professionals outside of the United States. It is intended to help you learn how best to approach a clinical problem from a surgical perspective. The text provides an insight into how a surgeon might manage a particular problem and consequently how to prepare for an OSCE that might entirely (or in part) consist of 'surgical' OSCE stations.

Although some of the stations in the book could easily be found in a "medicine" OSCE they are presented here from the perspective of both a student seeking to demonstrate well-developed surgical skills within an OSCE setting and a specialist surgical examiner. Presents a series of clinical problems with an emphasis on the surgical approach to the management. Appropriate for all students needing to demonstrate their clinical expertise in surgical cases. A companion book to the highly-commended "Core Clinical Skills for OSCEs in Medicine".

Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its practical approach strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing problem-solving skills. This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

knowledge to real life clinical situations. The problem-solving approach of Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its emphasis on everyday practice strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing sound analytical and confident decision-making skills. The core areas of undergraduate study are covered in a logical sequence of learning activities; the same questions are asked of each clinical case, followed by detailed explanatory answers. OSCE counselling cases, with related questions and answers, also feature in each section. Key concepts and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter, making these volumes the perfect revision aid for all types of case-based examination. The Obstetrics and Gynaecology volume, fully revised and updated in this third edition, focuses on the following topics: * Early pregnancy problems * Pregnancy dating and fetal growth * Late pregnancy problems * Labour * Medical disorders of pregnancy * Puerperium * Abnormal uterine bleeding * Amenorrhoea and menopause * Incontinence and prolapse * Neoplasia * Discharge and pain* Infertility * Fertility control Volumes in the Core Clinical Cases series remain absolutely invaluable in the run up to clinical, written or OSCE examinations, and ideal course companions for all undergraduate medical students at various stages in their clinical training.

preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.
