countries' generally accepted accounting standards (GAAP). This is just one example where the volume of investments increased concurrently with the adoption of IFRS. Therefore, the question arises if the mandatory adoption of IFRS in the EU in 2005 or in other cases significantly affected and continues to affect investment decisions among adopters or third parties. In order to better account for differences between different types of investors and investees, we differentiate between retail investors, institutional investors and corporate finance activities. Moreover, we focus on the consequence of IFRS adoption on equity investment decisions as most

Additionally, Lourenco & Branco point out that most research which finds no significant effects of IFRS adoption on investment decisions appears to focus on voluntary adoption before 2005. Thus, this paper mainly focuses on mandatory IFRS adoption. In this context, research suggests that mandatory IFRS adopters experience significant capital markets benefits as well as enhanced foreign institutional ownership and enhanced M&A activity. Ultimately, we observe four overarching drivers behind the aforementioned observations that impact investment decisions across

The requirement to maximise value for shareholders is at the core of any corporate investment or financing decision. The intrinsic value of proposed investments should be assessed before deciding how much capital to allocate; the benefits and risks associated with each available source of finance should be considered when capital is being raised; and capital, and any associated financial risks, should be managed in a way that continues to maximise value. At every stage, an analysis should be carried out to ensure the decision is optimal for shareholders and other capital providers.
