Now in its Fifth Edition, Financial Management for Public, Health, and Not-for-Profit Organizations is the leading textbook on financial management in the government, health, and not-for-profit sectors providing a comprehensive yet practical introduction to the financial decision-making and management skills required of students and practitioners in the field. Assuming readers have no prior training in financial management, authors Steven A. Finkler, Daniel L. Smith, Thad D. Calabrese, and Robert M. Purtell artfully combine the principles and theory and analytics of accounting and finance. Coverage includes cost analysis, budget preparation, budget and variance analysis, management control, and recording and reporting financial information, with an emphasis on preparing and analyzing financial statements. The authors detail the foundational principles of each of the methods introduced in the book, and through step-by-step equations, figures, and exhibits, they illustrate how to execute financial management in practice.

In this book, Shank and Govindarajan demonstrate how strategic cost management - an analytical framework which relates meaningful accounting information to a firm's business strategy - is changing accounting practices in leading companies. Using case studies, including Ciba-Geigy, Ford, Motorola and Texas Instruments, they show how the tools of strategic cost management - value chain analysis, strategic positioning analysis and cost driver analysis - provide a sustainable competitive advantage over companies whose cost systems are in disarray.

The chapters in this part also examine activity-based costing, total quality management, and the future of costing. Each chapter is followed by one or more articles that apply some of the material discussed in the chapter. The last chapter provides a summary of the book.

The book starts with a comparison of financial accounting and management accounting – both discussed based on the production firm PENOR Ltd. It further demonstrates accounting work in support of general management (CVP-analysis, DOL, performance measurement, risk management and M&A) as well as cost accounting (structures for absorption and marginal cost accounting systems, internal cost allocations, reporting, monitoring, manufacturing accounting/calculation, contribution margin accounting and activity based costing). The content is explained by detailed case studies. This Asia edition also includes real case studies about companies in Malaysia. All chapters outline the learning objectives, provide an overview, include case studies and how-it-is-done-paragraphs. The journal Accounting History was published in eight volumes intermittently between 1976 and 1986. It had a relatively small circulation and this re-issue of its anthology provides the opportunity for many of the articles which appeared in the journal over the years to once again reach a wider audience. The volume begins with items of a general nature, covering the importance of preserving accounting records and accounting history in general. Subsequent categories deal with the methodology of historical accounting research, government accounting, taxation, bankruptcy, professional accountancy and accounting theory, as well as auditing and management accounting.

Much has been written about the economic and political problems of countries that are in the process of changing from centrally planned systems to market systems. Most studies have focused on the economic, legal, political and sociological problems these economies have had to face during the transition period. However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. This book was written to help fill that gap. This book is the second in a series to examine accounting and financial system reform in transition economies. The first book used Russia as a case study. The present volume in the series examines some additional aspects of the reform in Russia and also looks at the accounting and financial system reform efforts that are being made in Ukraine, Bosnia & Herzegovina, Armenia and five Central Asian republics.

This bestseller text offers clear, simple to understand and comprehensive coverage of management and cost accounting for students and professionals. Packed with illustrations, examples and real-life applications, Management and Cost Accounting brings together techniques, concepts and practices in a highly readable way. Keeping its international focus, the text includes a wealth of case studies featuring companies from around the world, and includes up-to-date coverage of AI and robotics and other technology which affects management accounting.

Explains how faculty members can improve their teaching methods or how accounting units can improve their curricula/programs.

Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in

English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting, The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.
