As an active surgeon and former department chairman, Dr. Paul A. Ruggieri has seen the good, the bad, and the ugly of his profession. In Confessions of a Surgeon, he pushes open the doors of the O.R. and reveals the inscrutable place where lives are improved, saved, and sometimes lost. He shares the successes, failures, remarkable advances, and camaraderie that make it exciting. He uncovers the truth about the abusive, exhaustive training and the arduous devotion of his old-school education. He explores the twenty-four-hour challenges that come from patients and their loved ones; the ethics of saving the lives of repugnant criminals; the hot-button issues of healthcare, lawsuits, and reimbursements; and the true cost of running a private practice. And he explains the influence of the “white coat code of silence” and why patients may never know what really transpires during surgery. Ultimately, Dr. Ruggieri lays bare an occupation that to most is as mysterious and unfamiliar as it is misunderstood. His account is passionate, illuminating, and often shocking—an eye-opening, never-before-seen look at real life, and death, in the O.R.

For many businesses, Cost Reduction has been a priority for some time. As the Recession deepens and the Credit Crunch bites, however, the urgency has intensified. In a crisis, companies may need to cut many costs to restore their corporate health. Unfortunately, cost cutting is sometimes undertaken carelessly, and may cut a corporate artery; or is performed so persistently that it can lead to a corporate ‘death by a thousand cuts’. At other times, cost cutting occurs randomly, meaning that the savings made are only temporary and that the costs re-appear. Cost reduction is often omitted from management books, or is dealt with in a fragmented, incomplete way. Written by a chartered accountant and an engineer, this new book takes a holistic approach to the subject, and is an original practitioners’ guide on how to reduce costs in a way which does not ultimately destroy the business. This involves integrating the experience of leading practitioners with the available strategic models and theories.Strategic Cost Reduction is aimed at any person who is in a position to influence the strategy of the business, irrespective of its size, including directors, business unit managers and owner-managers, together with their advisors, such as chartered accountants. While it is written from an Irish perspective, many of the examples given are from multinationals operating in a global context, and so the book has wider relevance. While some success may result from focussing on the more obvious and immediate cost reduction targets, radical cost reduction is unlikely to be achieved by a draconian policy of ‘slash and burn.’ The ground-breaking strategic perspective described in this book will be far more productive. By careful planning and skilful implementation, it should be possible for companies to avoid the pitfalls and achieve lasting success. Outline of the Book Strategic Cost Reduction is in four parts. Part 1 deals with budgeting and other traditional approaches to cost reduction, including the various functional departments, to assess the effectiveness of existing cost reduction systems. It continues with the measurement of the problem, the setting of cost reduction targets and how to approach an emergency. Part 2 places cost reduction in a wider framework of strategy and values, considering different types of strategies and the critical functional safeguards, which should not be overlooked. It then looks at the wider strategic drivers of cost and approaches the issue by using the value chain, rather than traditional accounting information, which may not identify the root causes of the problem. Finally it delves into the issue of economies and diseconomies of scale. Part 3 outlines the modern operational tools used to analyse and manage costs by world class companies, such as Toyota and Motorola. It discusses ‘world class’ and ‘lean’ manufacturing, six sigma and business process reengineering. This is followed by the challenges of benchmarking and outsourcing. It provides a number of case studies and offers practical tips for implementation, as well as outlining the options available. Part 4 deals with issues of implementation and monitoring. It reviews issues around the structuring and rewarding the labour force.It goes on to establish the critical links with the budgeting and costing system, the role and costs of the head office and how quality and values can be monitored through a balanced scorecard.

It finishes with a summary of how to plan the journey and get started. Each concise chapter gives numerous examples and illustrations, and each one ends with a checklist of thoughts for the practising manager. The contents of the text are set out below:

Improving Profit is the number one objective of business leaders, yet most do not truly understand how to move beyond the basics when it comes to cost reduction for profit improvement. Typically, a company's response to reducing cost is to reduce the workforce. People are laid off in large numbers and dollars are saved—or so it seems. This is a mistake, a short-term solution. Profit Building provides a better approach, one that focuses on profit improvement as a stand-alone process, demonstrating how an organization can achieve its goals to improve profitability and reduce cost through a proven method based on team innovation management. Perry J. Ludy offers a hands-on guide that shows managers how to move profit and loss financial reviews beyond the basics to creative solutions and genuine action plans. Using the authors five-step Profit Building Process (PBP), Profit Building shows how to organize teams with the specific purpose of improving profit—while providing an opportunity for employees to participate in developing cost reduction strategies so that profit improvement is perpetual. A system of step-by-step activities designed to produce immediate and continuous results, the PBP shows managers how to apply concepts from prior learning—such as teams, innovation management, and performance improvement planning—to create tailor-made strategies for any organization. And it introduces """"Questions Brainstorming,""" a new twist to traditional brainstorming that fosters avid group participation resulting in better solutions. In order to achieve success beyond today, business leaders must leverage all resources available within the organization to improve profit, reduce cost, and create a better place to work. Profit Building is an executive handbook and a quick desk reference for managers that shows how to do just that.

In the United States and throughout the industrialized world, just as the population of older and sicker patients is about to explode, we have a major shortage of nurses. Why are so many RNs dropping out of health care's largest profession? How will the lack of skilled, experienced caregivers affect patients? These are some of the questions addressed by Suzanne Gordon's definitive account of the world's nursing crisis. In Nursing against the Odds, one of North America's leading health care journalists draws on in-depth interviews, research studies, and extensive firsthand reporting to help readers better understand the myriad causes of and possible solutions to the current crisis. Gordon examines how health care cost cutting and hospital restructuring undermine the working conditions necessary for quality care. She shows how the historically troubled workplace relationships between RNs and physicians become even more dysfunctional in modern hospitals. In Gordon's view, the public image of nurses continues to suffer from negative media stereotyping in medical shows on television and from shoddy press coverage of the important role RNs play in the delivery of health care. Gordon also identifies the class and status divisions within the profession that hinder a much-needed defense of bedside nursing. She explains why some policy panaceas—hiring more temporary workers, importing RNs from less-developed countries—fail to address the forces that drive nurses out of their workplaces. To promote better care, Gordon calls for a broad agenda that includes safer staffing, improved scheduling, and other policy changes that would give nurses a greater voice at work. She explores how doctors and nurses can collaborate more effectively and what medical and nursing education must do to foster such cooperation. Finally, Gordon outlines ways in which RNs can successfully take their case to the public while campaigning for health care system reform that actually funds necessary nursing care.

Why is surgery so expensive? Surgeon Paul A. Ruggieri reveals little-known truths about his profession—and the hidden flaws of our healthcare system—in this compelling and troubling account of real patients, real doctors, and how money influences medical decisions behind the scenes. Even many well-informed patients have no idea what may be contributing to the cost of their surgery. With up-to-date research and stories from his practice, Ruggieri shows how business arrangements among hospitals, insurance companies, and surgeons affect who gets treatment—and whether they get the right treatment. Pulling back the curtain from the hospital bed, he explains how to safeguard one's own health (and finances), and how America can make surgery more affordable for all without sacrificing quality care.

Excerpt from Cost-Cutting Strategies for the Park and Recreation Agency
The problem is multi - dimensional. Funding deficiencies compounded by inflation and specific cost increases have all cut into agency resources. The problem is also nationwide. In Oakland, California, playgrounds have closed. In New York City, park maintenance cycles have lapsed so that it will take an estimated 900 years to accomplish what needs to be done in the next 25. Well maintained and operated park systems assure continuing recreation experiences. These same park systems also represent a taxpayer investment no less legitimate than the investment in streets and sewers. To both preserve recreation opportunities and to protect park investment, today's practitioner must develop a keen sense of fiscal responsibility. Agencies can no longer afford to live on credit, adding parkland and building new facilities, while failing to fully assume or plan ahead for the cost of operation and maintenance.
