Proceedings of the Fifth International Congress on Mathematical Education

In Papua New Guinea hopes are high that real change is on its way; the country's political, administrative, financial and technical leaders now have to find a way to ensure the most productive distribution and use of financial resources. Many international actors are watching closely to see how this young country negotiates its path. Papua New Guinea became a major exporter of gas in 2014 when the \$19bn PNG liquefied natural gas (LNG) project was completed ahead of schedule and within budget, significantly increasing the size and strength of the economy. The year ahead is likely to see PNG benefit from the further development of its hydrocarbons sector; fuelling the growth of its economy as a whole. The LNG influx also poses challenges, however, in terms of ensuring inclusive growth and productive use of the new revenues. PNG takes pride in being a final frontier of natural and cultural development, but the task ahead is to protect the country's heritage while becoming part of the global economy.

International Congresses on Mathematical Education (ICMEs), under the auspices of the International Commission on Mathematical Instruction, are held every four years. Previous Congresses have been held in France (Lyons), England (Exeter), the Federal Republic of Germany (Karlsruhe), and the United States of America (Berkeley). The Fifth International Congress on Mathematical Education (ICME 5) was held in Adelaide, Australia, from August 24-30, 1984. More than 1800 participants from over 70 countries participated in the Congress, while some additional 200 people attended social functions and excursions. The program for ICME 5 was planned and structured by an International Program Committee, and implemented by the National Program Committee in Australia. For the main body of the program, Chief Organisers, assisted by Australian Coordinators, were invited to plan and prepare the individual components of the program which addressed a wide range of topics and interest areas. Each of these teams involved many individuals from around the world in the detailed planning and preparation of the working sessions for their area of program responsibility. For the actual working sessions at the Congress, the smallest group had some 60 members, while the largest had well over 300. In addition to the working sessions, there were three major plenary addresses, several specially invited presentations, and over 420 individual papers in the form of short communications, either as posters or brief talks.

In 2018 the Indonesian economy recorded a growth rate of 5.2%, the highest in five years. This was in spite of a slump in the rupiah and a trade imbalance, and took place against a backdrop of rising US interest rates and deteriorating trade relations between the world's two biggest economies. The country's emphasis on industrialisation and infrastructure development is laying the foundations for continued economic growth. Moreover, the archipelago's growing middle class population, geographical position and human capital development agenda, alongside progress in free-trade agreements, make it a strong contender on the global economic stage. The country holds considerable potential for developing entrepreneurial and creative prowess, already being home to four unicorn startups. Investors have continued to look beyond traditional destinations, with emerging cities like Surabaya and Palembang showing strong possibilities for economic growth. Although the outcome of the April 2019 national election will determine the course of further infrastructure development and tax reforms, the future looks promising, with predictions of continued growth accompanied by stable inflation.

Technology and Development

Education, Industry and Technology is a result of a conference in Bangalore, which discusses industrial and technological issues in primary school science and other related topics. This text specifically examines building applications into secondary science curricula and strategies for teaching science, including the use of games and simulations, work experience programs, industrial visits, and methods of promoting technology as the means for solving problems. The needs of industry and the role of tertiary institutions in development are also some of the highlights of this text. This book will be very helpful to educators and government administrators assigned to advance education.

Every two years, Archiprix International invites all university-level courses in the field of architecture, urban planning and landscape architecture to select their best graduation projects and submit these for participation. This publication displays a representative selection of the projects submitted, including the nominees and winners chosen by an independent jury, and the favorites chosen by the participants themselves, supplemented by a representative selection that offers a picture of the range of designs and the graphical distribution across all continents. In addition, the book contains the personal data of the projects' designers. The full range of submissions can be viewed on the accompanying DVD. Archiprix International was first organized in Rotterdam, the home base of Archiprix International, in 2001. In 2009, Archiprix International was held in Montevideo, with the faculty of architecture of the University of Montevideo, Uruguay, as the main partner. Archiprix International provides a platform for educational courses in architecture, urban planning and landscape architecture, and brings together and supports newly graduated, talented designers at the onset of their career.
