A Practical Guide to Obstetrics & Gynecology offers complete coverage of the practical aspects of obstetrics and gynaecology from both examination and viva point of view. This book covers important topics like history taking and examination, long cases in obstetrics and gynaecology, detailed normal labour room procedures and minor OT procedures in gynaecology. Also included are discussions on contraception, imaging, instruments and specimens, and drugs used in obstetrics and gynaecology. The book features an appendix covering useful topics such as scoring systems, tests, classification systems, tables, charts, formulae and nutritional values. A Practical Guide to Obstetrics & Gynecology contains an accompanying CD, covering basics related to obstetrics such as: bony pelvis, foetal skull, mechanism of normal vaginal delivery, and mechanism of delivery in case of foetal malpresentations (Breech presentation, occiput posterior position). The breadth of content in this title makes it essential for residents, obstetricians and gynaecologists. Key Points Additional CD covers a variety of basics in obstetrics Comprehensive text covering practical aspects of obstetrics and gynaecology Enhanced by 340 full colour images

"This manual has been designed to introduce trainees to safe surgical techniques and obstetric clinical skills in a structured workshop environment. It is the course manual for the Basic Practical Skills in Obstetrics and Gynaecology course offered under the aegis of the Royal College of Obstetricians and Gynaecologists." "This manual consists of three modules covering basic surgical skills and basic skills in obstetrics. This course and manual will be a valuable early step in building safe and sound surgical and obstetric skills and will provide

Basic Practical Skills in Obstetrics and Gynaecology

Endometriosis affects women in the reproductive years, is associated with pelvic

pain and infertility, and - although not life threatening - can seriously impair health, with huge economic and social consequences. It is arguably the most frequent problem encountered in contemporary More...gynecology and is the subject of much ongoing research and innovation in management. This beautifully and comprehensively illustrated Atlas, now in its third edition, provides a useful educational tool for trainees and general obstetricians and gynecologists who may not be up-to-date with the most important recent research on the diagnosis and management of the condition; particularly expanded for this edition are the chapters on ultrasound imaging and the nutritional aspects of the subject. SBA Questions for the Part 2 MRCOG is a valuable preparation resource aimed at those specialising in obstetrics and gynaecology who are planning to take the Part 2 MRCOG examination. It contains two hundred practice single best answer questions written by MRCOG question writers, with accompanying explanations and references. It also contains an introduction to the new format of the examination and the rationale for the changes. The first section consists of two hundred single best answers allowing the reader to test their knowledge. The second section lists the correct response accompanied by an explanation and suggestions for further reading. SBA Questions for the Part 2 MRCOG is the only official preparation book produced by the RCOG and is therefore essential

reading for candidates sitting this examination in its new format.

Enhances professional labor and delivery skills by providing the expertise and step-by-step guidance for preventing prolonged labor.

The Oxford Textbook of Obstetrics and Gynaecology is an up-to-date, objective and readable text that covers the full speciality of Obstetrics and Gynaecology. This comprehensive and rigorously referenced textbook will be a vital resource in print and online for all practising clinicians. Edited by a team of four leading figures in the field, whose clinical and scientific backgrounds collectively cover the whole spectrum of Obstetrics and Gynaecology with particular expertise in fetomaternal medicine and obstetrics, gynaecological oncology, urogynaecology, and reproductive medicine, the textbook helps inform and promote evidence-based practice and improve clinical outcomes worldwide across all facets of the discipline. The editors are supported by contributors who are internationally renowned specialists and ensure high quality and global perspective to the work. Larger sections on the Basics in Obstetrics and Gynaecology, Fetomaternal medicine, Management of Labour, Gynaecological problems, Gynaecological oncology are complimented by specialist sections on areas such as Neonatal Care & Neonatal Problems, Reproductive medicine, and Urogynaecology and Pelvic Floor Disorders to name a few. The evidence-based presentation of

current diagnostic and therapeutic methods is complemented in the text by numerous treatment algorithms, giving the reader the knowledge and tools needed for effective clinical practice. The Oxford Textbook of Obstetrics and Gynaecology is essential reading for specialist obstetricians and gynaecologists, subspecialists, and O&G trainees across the world.

The #1 clinical reference on pediatric and adolescent gynecology is now in its updated Fifth Edition. Written by experts from The Children's Hospital in Boston and other leading medical centers, this handbook presents contemporary approaches to diagnosis and medical and surgical management of gynecologic problems in infants, children and adolescents. This edition features cutting-edge information on urology and complementary and alternative medicine and expanded coverage of surgical techniques for correcting structural abnormalities of the

reproductive tract. More than 400 illustrations—including 8 pages of full-color plates—complement the text. The book also includes outstanding algorithms and tables and abundant case examples.

This volume includes the latest diagnostic criteria for PCOS and comprises the most up-to-date information about the genetic features and pathogenesis of PCOS. It critically reviews the methodological approaches and the evidence for various PCOS susceptibility genes. The book also discusses additional familial phenotypes of PCOS and their potential genetic basis. All four editors of this title are extremely prominent in the field of PCOS.

This interdisciplinary collection examines the role that alcohol, tobacco and other drugs have played in framing certain groups and spaces as 'dangerous' and in influencing the nature of formal responses to the perceived threat. Taking a historical and cross-national perspective, it explores how such groups and spaces are defined and bounded as well as the processes by which they come to be seen as 'risky'. It discusses how issues of perceived danger highlight questions of control and the management of behaviours, people and environments, and it pays attention to the way in which sanctions and regulations have been

implemented in a variety of often inconsistent ways that frequently impact differently on different sections of the population. Bringing together a range of case studies drawn from different countries and across different periods of time, the chapters collected here illustrate issues of marginalisation, stigmatisation, human rights and social expectations. It is of interest to a diverse audience of historians, philosophers, human geographers, anthropologists, sociologists and criminologists interested in substance use and misuse, deviance, risk and power among other topics.

Immunization during pregnancy with currently recommended vaccines prevents infection in the mother, the unborn fetus, and the young infant, and there is an increasing focus from different stakeholders to use this approach for other infections of importance to protect these vulnerable groups. The aim of this Maternal Immunization book is to provide a contemporary overview of vaccines used in pregnancy (and the lactation period), with emphasis on aspects of importance for the target groups, namely, rationale for the use of vaccines in pregnancy, safety, immunogenicity (immunology), timing to vaccinate, repeat doses, protective effects in the mother, fetus, and infant, and public acceptance

and implementation, of existing and of future vaccines. Provides an overview of a quickly evolving topic. This will benefit the reader who wishes to rapidly become informed and up-to-date with new developments in this field Suitable to a broad audience: scientific researchers, obstetricians, gynecologists, neonatologists, vaccinators, pediatricians, students, and industry. Maternal vaccination impacts a wide range of specialists Allows health care professionals/researchers to gain insight into other aspects of vaccination in pregnancy outside of their specialism Is coauthored by specialists from multiple disciplines, providing a diverse view of the subject, increasing its interest and appeal Creates awareness of the current developments in this area of medicine and of the potential of maternal vaccination to improve the health of mothers and infants worldwide

Written by two experienced RCOG examiners, both of whom have been involved in the development of the new Part 3 MRCOG examination, this book is essential reading for any trainee preparing to sit the exam. The authors clearly describe the breadth and depth of the curriculum modules and the professional behaviours that will be assessed in the five clinical skills domains. The text includes written examples of every module, links to eight videos showing candidates attempting four real Part 3 tasks, examiners' comments, and a detailed discussion of each example. The content will help candidates understand what is required to pass the examination and how to demonstrate their knowledge and skills to best effect. The book will also be useful for trainers preparing their trainees for the new exam. Based on the principles of good medical practice, there are practical tips here for doctors and obstetricians at all levels. In light of revised recommendations for intrapartum care, this updated edition reviews best practice in all aspects of labour and delivery.

"This book sets out how the concept of ambulatory gynaecology can be applied to the main areas of gynaecological practice. It describes how national guidelines can be integrated into modern gynaecological practice in the context of the Government's National Health Service (NHS) plan and provides an essential guide to all practising clinicians." "A change from traditional care pathways to more cost effective, patient-centred approaches to medical practice lies at the heart of modern health service management. A 'see and treat' management philosophy is growing. 'One stop' clinics and 'day surgery' operations are replacing traditional outpatient consultations and inpatient surgery and the term 'ambulatory gynaecology' is being adopted to describe this philosophy."--BOOK JACKET. This volume of practise true/false MCQs and short answer questions is intended to be used by the trainee obstetrician and gynaecologist as a self-assessment aid throughout training and during revision for the MRCOG examination, in particular Part 2. Questions have been carefully designed to test both theoretical and practical knowledge, and are representative of the curricular elements highlighted within the RCOG trainee logbook.

This book provides an overview of acute gynaecology and early pregnancy, and reflects the RCOG's Advanced Training Skills Module syllabus.

Gynaecology in Primary Care comes at a time of great change in health service delivery. General practice is facing the challenges of developing Clinical Commissioning Groups, providing an ever greater range of primary care services and implementing NICE guidelines, whilst CCGs through their members will be under a legal duty to innovate. From a provider perspective, the book equips general practitioners with up-to-date knowledge of common gynaecological conditions, suggestions of best practice with regard to management and investigations to be undertaken within primary care, and guidelines for onward referral, where this is appropriate and necessary. From a commissioning perspective it provides an invaluable resource to CCGs, to inform their future pathways for

gynaecology care. This highly practical book delivers the main aim of the RCP report - to ensure best care for female patients in the setting of their choice and where possible to develop streamlined one-stop services in primary care so that women do not have to take time off from their work and family commitments. It is ideal for general practitioners needing to be inspired and informed, and is also highly recommended for other healthcare professionals and medical students with an interest in women's health. 'Optimal patient care requires many connected features to synchronise effectively. This book describes how this could be achieved by focusing attention on well-crafted, evidencebased clinical pathways. This book advances our thinking on how we connect clinical, system and patient level perspectives on optimal care management.' Denis Gizzi, in his Foreword 'Written by a highly regarded, experienced and practicing GP, who has taken on the role as Clinical Director on behalf of the CCG for this programme area, this book is a valuable asset for both practicing GPs and developing CCGs to ensure that gynaecology services effectively commission, maximise the health of the population, improve the experience of the patient, and improve value for money.' Kath Wynne-Jones, in her Foreword 'An excellent guide to the management of gynaecological problems in primary care for not only clinicians in training, but for more experienced clinicians who look for straightforward and easily accessible advice to support their clinical management decisions. Look no further than this textbook. Dr Sharma's textbook will be a boon to developing organisations in delivering world-class services.' Dr Ian Wilkinson, in his Foreword 'This chapter has one chance to make a first impression on the reader. Similarly, the clinician has only one chance to make a first impression on the patient who has experienced domestic and/or

sexual abuse, such that the patient has the confidence to disclose what has happened to her. . She or he may have taken months or years before feeling able to speak about what has happened, so it is essential that they experience a sympathetic, non-judgemental response from the clinician.

Descriptions of the positive effects of an empathetic and non-judgemental responses have been given by two female doctors who themselves sought help following sexual violence and domestic abuse, respectively.^{1,2} This positive response also has the effect of validating the patient's experience of abuse. This chapter aims to describe the magnitude of the problem of domestic and sexual violence and abuse, and cover the important aspects of the initial contact between the clinician and the patient"--Provided by publisher.

Avoiding overweight and obesity is the best-established diet-related risk factor for cancer. The proportion of people who are overweight/obese is increasing, and the amount of physical activity is decreasing in most populations, including urban populations in many developing countries. The increasing prevalence of overweight/obesity is presumably due to the increasing availability of highly palatable, high energy foods and an increasing sedentary lifestyle due to

mechanisation of both workplace and leisure activities. Overweight/obesity and reduced physical activity increases the risk of cancers in various organs. Maintaining a healthy body weight and regular physical activity is the second most important way to prevent cancer, after tobacco control. The suggestions of possible public health action aimed at tackling these risk factors include education activities to promote balanced diets which are not excessive in energy and broad education and planning to enable and encourage physical activity during work and leisure. The Handbook Volume 6 on Weight Control and Physical Activity contains a full discussion of this topic, together with recommendations for public health action.

The Part 3 MRCOG is a clinical assessment of knowledge, skills, attitudes and competencies. Passing the Part 3 exam leads to the award of the Membership of the Royal College of Obstetricians and Gynaecologists (MRCOG) and remains the essential waypoint for UK trainees to pass from core training to higher training. Trainees must have passed MRCOG Parts 1 and 2 before they can sit the Part 3 exam (Royal College of Obstetricians and Gynaecologists). This book is a complete revision guide for students preparing for the MRCOG Part 3 examination. Beginning with an overview of training in obstetrics and gynaecology in the UK and basics of the exam, the following chapters

provide step by step tips and advice on aspects of the exam, patient safety, communication with patients and colleagues, information gathering, application of knowledge, and clinical governance. The book features nearly 50 OSCE scenarios with variations that may be encountered in the exam, as well as clinical problems and their solutions. Related specialties such as anatomy, genetics, immunology, endocrinology, and psychology, are also discussed. Since the therapeutic value of umbilical cord blood (UCB) stem cells was first recognised in the late 1980s, there has been a proliferation of both public and private UCB banks worldwide. However, the ability to utilise such a potentially valuable resource has provoked a number of controversies. In a distinctly accessible style, this book unpacks the socio-legal implications of the UCB collection process and constructs a detailed analysis of the law and ethics that surrounds UCB banking in the UK, including ownership of the cells. Its enquiry is located within the theoretical framework of altruism versus self-interest and explores the notions of risk and choice associated with

this distinctive blend of public/private healthcare provision. The book evaluates the impact of the Human Tissue Act 2004 and the European Union Tissues and Cells Directive (2004/23/EC) on the UCB industry and provides a unique insight into the effect that the law may have on the NHS whose maternity staff and premises are used to collect UCB. This book would be of interest primarily to a UK readership in addition to expectant families, health professionals, students, academics, practitioners and the UCB industry elsewhere in the world.

The new edition of Physiology in Childbearing with Anatomy and Related Biosciences continues to offer readers with a sound introduction to human biology as it relates to pregnancy and childbirth. The new edition retains the online question bank with downloadable image collection and is suitable for midwives - whether qualified or in training - throughout the world. Straightforward writing style helps demystify a challenging subject area Applies theory to practice to show how a knowledge of the biological sciences can enhance the care given to mothers and babies Designed to facilitate early recognition of pathology to help prevent morbidity and mortality Ideal introduction to basic biochemistry, cellular biology and genetics for those who have no prior knowledge of the subject areas Chapters on embryology help explain the occurrence of neonatal pathology A 'body

systems approach' - including embryological development - enables an understanding of the physiological and pathophysiological changes that occur during pregnancy Clear diagrams allow an understanding of the complex three-dimensional concepts seen in biology Helpful pedagogy such as 'Main Points' boxes at the end of each chapter act as useful aide-memoires Enhances the safety of mothers and babies, both in the developed world and those countries where the provision of adequate care remains limited Revised contributor team provides an international perspective Updated design presents shorter sections of information with concise summaries of 'key points' and easy to interpret figures and tables

First published in 1917 as 'Midwifery', Obstetrics by Ten Teachers is well established as a concise, yet comprehensive, guide within its field. The twentieth edition has been thoroughly updated by a new team of 'teachers', integrating clinical material with the latest scientific developments that underpin patient care. Each chapter is highly structured, with learning objectives, definitions, aetiology, clinical features, investigations, treatments, case histories and key point summaries and additional reading where appropriate. New themes for this edition include 'professionalism' and 'global health' and information specific to both areas is threaded throughout the text. Along with its companion Gynaecology by Ten Teachers the book will

continue to provide an accessible 'one stop shop' in obstetrics and gynaecology for a new generation of doctors.

This title includes Foreword by David Taylor, Professor and Vice Dean of Leicester Medical School. Preparing for the Part 2 MRCOG examination remains a daunting and complex task, particularly as learning and revision often need to fit around clinical commitments. Much has been written about how to prepare for and pass exams, yet it remains surprising how often well-read candidates provide unsatisfactory answers in areas which they know well. Clearly, a sound understanding of the topic area is essential, but deeper knowledge also increases uncertainty, and the vast developments in the field mean that proficiency in all areas is next to impossible. Thus a critical point for postgraduate candidates,

who more often than not will prepare for the examination in isolation, is to develop a real understanding of what the examination is meant to assess...This revision aid in obstetrics and gynaecology is based on the Extended Matching Question format (EMQ). It contains forty-two questions of varying degrees of difficulty, along with detailed answers. "MRCOG Part 2 Essential EMQs" is an indispensable study and revision aid for postgraduate medical students preparing for Part 2 of the Membership of the Royal College of Gynaecologists (MRCOG) examination or equivalent. "The number of published revision aids including this question format in postgraduate Obstetrics and Gynaecology remains limited. With this book we wanted to produce a comprehensive selection of EMQ, covering broad areas relevant to the speciality, which would be useful those preparing for postgraduate examinations at Part 2 MRCOG level or equivalent." - Marwan Habiba, Andrea Akkad, Justin Konje. This 4th edition of the stroke guideline, prepared by the Intercollegiate Stroke Working Party, provides comprehensive guidance on stroke care pathway, from acute care through rehabilitation and secondary prevention on to long-term support and terminal care. A fully updated and illustrated handbook providing comprehensive coverage of all curriculum areas covered by the MRCOG Part 1 examination.

This invaluable resource consists of 400 SBA questions (200 in Obstetrics and 200 in Gynaecology), followed by 400 EMQs (200 in Obstetrics and 200 in Gynaecology), grouped into papers, to provide enough material to guide preparations and to give some practical experience of the examination formats. All the questions have answers with explanations and sources of evidence for the answers. In preparing for the examination, candidates should make repeated references to these sources of evidence. There is also general advice on how to prepare for the examination and discussion of the reasons why trainees fail the examination.

APPRAISAL AND REVALIDATION SERIES The Appraisal and Revalidation Series helps doctors demonstrate their competence to the standard expected by the General Medical Council and to the standard expected if they are recognised as having 'special clinical interests'. It helps doctors gather evidence of their performance for appraisal and revalidation portfolios. Revalidation will change the emphasis of regulation of doctors with an interest in reproductive medicine away from the qualifications of MRCOG or DRCOG towards regular assessment of a doctor's competence to practise and it will be incumbent upon the individual doctors whether in training or in substantive posts in primary or secondary care to reflect on their work and to demonstrate expertise within their special clinical interests. This book will help to alleviate anxieties by removing the 'fear of the unknown' through a series of concise chapters covering the crucial clinical areas in reproductive healthcare. I commend the excellent practical advice on how to accumulate revalidation data by using practical examples based on cycles of evidence. I envisage that many of us involved in the care of women will refer to this book time and time again. An excellent contribution that will help doctors immensely in their preparation for the requirements of revalidation on all aspects of reproductive health Professor Steve Field in his foreword For more information on other titles in this series please [click here](#)

This authoritative textbook provides a much-needed guide for postgraduate trainees preparing for the European Board and College of Obstetrics and Gynaecology (EBCOG) Fellowship examination. Published in association with EBCOG, it fully addresses the competencies defined by the EBCOG curriculum

and builds the clinical practice related to these competencies upon the basic science foundations. Volume 1 covers the depth and breadth of obstetrics, and draws on the specialist knowledge of four highly experienced Editors and over 100 contributors from across Europe, reflecting the high-quality training needed to ensure the safety and quality of healthcare for women and their babies. It incorporates key international guidelines throughout, along with colour diagrams and photographs for easy understanding. This is an invaluable resource, not only for postgraduate trainees planning to sit the EFOG examination, but also for practising specialists looking to update their knowledge and skills to meet the ever-evolving complexity of clinical practice.

This expert guide will help readers learn about the role of hysteroscopy in the management of a range of common and less common gynaecological problems. In particular, the book covers the diagnosis and treatment of endometrial and uterine anatomical abnormalities that are associated with

abnormal uterine bleeding and impairment of reproduction. Contemporary hysteroscopic techniques are described allowing the reader to understand how to perform both inpatient and outpatient procedures. Based on the annual RCOG/BSGE Diagnostic and Operative Hysteroscopy training course, this comprehensive guide covers fundamental topics such as equipment, energy modalities and operative set up. The book also explores innovative ambulatory surgery and hysteroscopic interventions in an operating theatre environment. Written by international experts in hysteroscopy and including sections on training in, and monitoring of clinical practice, this guide proves an ideal companion for health care professionals looking to provide best clinical practice and optimal patient experience.
