This new Study Guide for Athletic Training students provides a framework to begin certification examination preparation. Students will use this to focus their study as a part of a preparation program. The outline format allows students to look over chapters at a glance to determine potential deficiencies in recall. The text mimics the current Board of Certification (BOC) examination format and focuses exclusively on the 12 NATA Educational Competencies as the framework. The text also offers the reader a concise look at anatomy and physiology with many tables and pictures for the visual learner. The book is the only BOC examination preparation guide that includes content with the 2000+ questions. An accompanying interactive DVD-ROM includes videos, animations, images, interactive quizzes, labeling exercises, supplemental content, and more.

This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

An in-depth review by leading authorities of the latest therapies and techniques for rescuing persons in cardiac arrest. The authors explore the physiology behind current state-of-the-art clinical resuscitation and translate it into practical bedside recommendations, clinical tips, and expert techniques. Topics of interest include the epidemiology of sudden death, management of ventilation, chest compression technique training, public access defibrillation, drug delivery during CPR, the latest drug therapies, and cardiac arrest in disease, pregnancy, drowning, lightning strike, and trauma. The authors also review the major ongoing research in resuscitation science that will likely affect the next set of international resuscitation guidelines.***

***Clinical Exercise Physiology, Second Edition, provides a comprehensive look at the clinical aspects of exercise physiology by thoroughly examining the relationship between exercise and chronic disease. Updated and revised, this second edition reflects important changes that have occurred in the field since the first edition was published. It will provide professionals and students with fundamental knowledge of disease-specific pathology and treatment guidelines while also guiding readers through the clinical exercise physiology associated with exercise testing and training of patients with a chronic disease. The second edition of Clinical Exercise Physiology builds on information presented in the previous edition with reorganized chapters, updated and revised content, and the latest information on the key practice areas of clinical exercise physiology: endocrinology, the metabolic system, the cardiovascular system, the respiratory system, oncology, the immune system, bone***

***and joint health, and the neuromuscular system. This second edition also features an online ancillary package, allowing instructors to more effectively convey the concepts presented in the text and prepare students for careers in the field. Clinical Exercise Physiology, Second Edition, is easy to navigate--the logical order of the chapters makes key information easy to find. The detailed chapters discuss 23 disease states and conditions that clinical exercise physiologists encounter in their work and provide guidance for the expert care of the populations discussed. Each chapter covers the scope of the condition; its physiology and pathophysiology and treatment options; clinical considerations, including the administration of a graded exercise test; and exercise prescription. The text also details how clinical exercise physiologists can most effectively address issues facing special populations, including children, the elderly, and female athletes. This comprehensive resource is an asset to new and veteran clinical exercise physiologists as well as those preparing for the ACSM Registry Examination. A must-have study tool for examination candidates, this text is on the suggested readings lists for both the Exercise Specialist and Registered Exercise Physiology exams. The text specifically addresses the knowledge, skills, and abilities (KSAs) listed by the ACSM for each of these certifications. Clinical Exercise Physiology, Second Edition, is the definitive resource on the use of exercise training for the prevention and treatment of clinical diseases and disorders. It includes the following features: -Revised and updated content reflects the recent changes in exercise testing and training principles and practices. -Four new chapters on depression and exercise, metabolic syndrome, cerebral palsy, and stroke are evidence of how the field has evolved in considering patients with more widely diagnosed diseases and conditions. -A new text-specific Web site containing a test package and PowerPoint presentation package helps instructors present the material from the book. -Case studies provide real-world examples of how to use the information in practice. -Discussion questions that highlight important concepts appear throughout the text to encourage critical thinking. -Practical application boxes offer tips on maintaining a professional environment for client-clinician interaction, a literature review, and a summary of the key components of prescribing exercise. Clinical Exercise Physiology, Second Edition, is the most up-to-date resource for professionals looking to enhance their knowledge on emerging topics and applications in the field. It is also a valuable text for students studying for the ACSM Registry Examination.***

Bystander CPR***

***Cardiopulmonary Resuscitation***

Background: It has been proved that bystander cardiopulmonary resuscitation (CPR) saves lives; however, which training method in CPR is most instructive and whether survival is affected by the training level of the bystander have not yet been fully described. Aim: to identify the factors that may affect 7th grade students' acquisition of CPR skills during training and their willingness to act, and to describe 30-day survival from out-of-hospital cardiac arrest (OHCA) after bystander CPR and the actions performed by laymen versus duty medically educated personnel. Methods: Studies I-III investigate a CPR training intervention given to students in 7th grade during 2013-2014. The classes were randomized to the main intervention: the mobile phone application (app) or DVD-based training. Some of the classes were randomized to one or several additional interventions: a practical test with feedback, reflection, a web course, a visit from elite athletes and automated external defibrillator (AED) training. The students' practical skills, willingness to act and knowledge of stroke symptoms, symptoms of acute myocardial infarction (AMI) and lifestyle factors were assessed directly after training and at 6 months using the Laerdal PC SkillReporting system (and entered into a modified version of the Cardiff test scoring sheet) and a questionnaire. The Cardiff test resulted in a total score of 12-48 points, and the questionnaire resulted in a total score of 0-7 points for stroke symptoms, 0-9 points for symptoms of AMI and 0-10 points on lifestyle factors. Study IV is based on retrospective data from the national quality register of the Swedish registry of cardiopulmonary resuscitation, 2010-2014. Results: A total of 1000 students were included in the CPR training intervention. The DVD-based group was superior to the app-based group in CPR skills, with a total score of 35 (SD 4.0) vs 33 (SD 4.2) directly after training (p < 0.05).
