# **Cracking The Intercollegiate General Surgery Frcs Viva A Revision Guide**

With over 1000 questions, MCQs and EMQs in Surgery is the ideal self-assessment companion guide to Bailey & Love's Short Practice in Surgery. The book assists readers in their preparation for examinations and to test their knowledge of the principles and practice of surgery as outlined within Bailey & Love. Sub-divided into 13 subject-specific sections, both MCQs and EMQs provide a comprehensive coverage of the surgical curriculum as

well as the core learning points as set out in Bailey & Love: Each section emphasises the importance of self-assessment within effective clinical examination and soundly based surgical principles, while taking into account the latest developments in surgical practice. MCQs and EMQs in Surgery is an excellent companion to Bailey & Love and provides a valuable revision tool for those studying for MRCS.

The Royal College of Surgeons' of England two-day "definitive surgical trauma skills course" is run by the authors. The course began in 1997 but a new syllabus has recently been put in place. The focus is on thoracic, abdominal and vascular injuries, caused by both penetrating trauma, such as a knife, and ballistic trauma

caused by guns. This Manual accompanies the course and its aim is to “demystify the body” and show how to control massive blood loss. Interventions, whether they be military or civilian, are described in full, and techniques derived from the battlefield and world-wide hotspots in trauma —are exemplified within this book. This handbook serves as a reference guide for everyday clinical decision-making and provides the organisational knowledge necessary for those nurses who work on the interface of the statutory and voluntary sectors in health, education and social care.

This revision book is an aid to those preparing for the FRCS General Surgery Section 1. The topics and chapters are taken directly from the Intercollegiate

Surgical Curriculum. The philosophy of this book is to focus on the level of knowledge and the approach that would be expected of the better candidates as they approach the end of their training and make the transition into consultants. In addition to the acquisition of knowledge through the process of tackling questions, the book will hopefully identify to the reader areas gaps in their knowledge base for which further study is required. Various techniques including the use of diagrams and tables are utilised to explain key facts. As per the curriculum, the book is organised into chapters in accordance with the syllabus, allowing less familiar topics such as relevant aspects in urology and gynaecology to be covered. Topics such as

Gastrointestinal, HPB, Vascular, Breast and Endocrine Surgery are understandably covered in greater depth given their common occurrence in the examination. Questions are presented in a single best answer and extended matching item format, mirroring those that the candidate will encounter during the examination. This book is useful for candidates in both the early and late stages of their revision for the examination. Early familiarity with the range and depth of topics may help guide further self-directed learning. Those in the latter stages of revision can use the questions to build confidence and reinforce their knowledge. Each chapter is written by an authoritative author alongside the book editor to ensure it is relevant and informative for the

the candidate preparing for the Intercollegiate FRCS in General Surgery or international equivalents; the trained surgeon faced, through necessity, with undertaking an infrequently performed procedure; and the many surgeons working in hospitals throughout the world without access to specialist services. It remains above all a practical text which will guide the surgeon in training, or one unfamiliar with a procedure, on how to perform it, but more importantly on how to manage the uncertainties which so often arise This is a 'What to do' book. Using it the reader can

This book brings together a medley of over 1500 aphorisms, quotations, and rules - by surgeons and non-surgeons - about surgery, surgeons and anything which may be relevant to the practice of surgery. It should gratify all potential tastes as the book includes ancient as well as contemporary entries, formal and colloquial, pronounced by surgical giants or anonymous - only guided by the prerequisite that the entry appeals to the surgical soul. Readers will probably use this book to decorate their lectures or manuscripts with relevant smart or entertaining entries. Most of all this book

will simply be read or browsed for pleasure: the reader will enjoy many of the entries, and will discover that surgical truth is old, that what is thought a novel idea has been said before; that what is seen was seen many years ago.

Landmark Papers in General Surgery will give surgeons, surgical trainees and other healthcare professionals an expert appraisal of key papers, and fast access to the evidence base behind current clinical practice in General Surgery. Each chapter draws together a fascinating selection of the most important clinical trials across every

subspecialty within General Surgery, as selected and appraised by a panel of experts. Organized according to a common format, each discussion offers a clear structure by which to appraise the medical literature. Following a background summary of each trial, experts discuss the impact of the research and critique the methods used, giving the reader rapid understanding of the paper's place within the wider field of research. This emphasis on the tools of critical appraisal is enhanced by an introductory chapter equipping the reader with the skills required to knowledgeably appraise a research paper.

For clinicians needing to keep abreast of the vast scope of medical research, this book will prove an interesting and timesaving resource, but it will also appeal to allied health professionals keen to improve the depth of their understanding of surgery. By bringing together the evidence base with expert guidance on critical appraisal, higher surgical trainees preparing for the academic and specialty sections of the FRCS exit examination will also find the text invaluable as a means of consolidating and nuancing their knowledge.

Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice
