**Concentrating on technology, economics, labor, and social history, Cradle to Grave documents the full life cycle of one of America's great mineral ranges from the 1840s to the 1960s. Lankton examines the workers' world underground, but is equally concerned with the mining communities on the surface. For the first fifty years of development, these mining communities remained remarkably harmonious, even while new, large companies obliterated traditional forms of organization and work within the industry. By 1890, however, the Lake Superior copper industry of upper Michigan started facing many challenges, including strong economic competition and a declining profit margin; growing worker dissatisfaction with both living and working conditions; and erosion of the companies' hegemony in a district they once controlled. Lankton traces technological changes within the mines and provides a thorough investigation of mine accidents and safety. He then focuses on social and labor history, dealing especially with the issue of how company paternalism exerted social control over the work force. A social history of technology, Cradle to Grave will appeal to labor, social and business historians.**

**Death and dying experiences are not common across human race because humans do not share common cultural heritage and physical environment. The fact of death thus can be considered as socially constructed fact abounded by idiosyncratic religious beliefs and rituals existing within social life. It is almost impossible to have common consensual understanding of death and dying. This book tries to investigate various sources of knowledge about death in multiple disciplines from sociological lenses.**

The fifth edition of this book extends the discussion of the challenges faced by urban sociology in the global age, while covering the issues traditionally associated with urban sociology. It presents a balanced review of the ecological perspective and the political and economic contexts of the urban environment. Topics include communities in cities, minority and ethnic groups, poverty, power, crime, cities in economic development and underdevelopment, metropolitanization and urban sprawl, and urban policy and planning. The final chapter explores the significance of cyberspace, transnationalism, and global terrorism for the future of urban sociology.

Marriage and social inequality are closely interrelated. Marriage is dependent on the structure of marriage markets, and marriage patterns have consequences for social inequality. This book demonstrates that in most modern societies the educa tional system has become an increasingly important marriage market, particularly for those who are highly qualified. Educational expansion in general and the rising educational participation of women in particular unintentionally have increased the rate of "assortative meeting" and assortative mating across birth cohorts. Rising educational homogamy means that social inequality is further enhanced through marriage because better (and worse) educated single men and women pool their economic and sociocultural advantages (and disadvantages) within couples. In this book we study the changing role of the educational system as a marriage market in modern societies from a cross-national comparative perspective. Using life-history data from a broad range of industrialized countries and longitudinal statistical models, we analyze the process of spouse selection in the life courses of single men and women, step by step. The countries included in this book vary widely in important characteristics such as demographic behavior and institutional characteristics. The life course approach explicitly recognizes the dynamic nature of partner decisions, the importance of educational roles and institutional circum stances as young men and women move through their life paths, and the cumulation of advantages and disadvantages experienced by individuals.

The empirical study of individuals' life-course is one of the most promising areas of research within sociology today. Increased availability of large-scale longitudinal data and improved statistical methods have made it possible to address theoretically relevant questions about events such as entrance into the labour market, job mobility, divorce and death.

This book consists of studies capturing the life-course from the cradle to the grave. The research questions include long-term consequences of childhood conditions; family formation and school-careers; work and parental leave; gender discrimination in job promotion; divorce and occupational career; persistence in poverty; and the intriguing question of why the highly educated tend to survive everyone else. The studies shed light on the relation between family and work, on gender inequality, social class differences, welfare state redistribution, and labour market processes. They do this in a particular context, namely Sweden in the post-war period that is, during the decades that formed one of the most advanced welfare states in modern history. One chapter provides a descriptive account of institutional and life-course change in Sweden during that period. Most authors use the Swedish level-of-living surveys, a unique data set providing ample opportunity to study social processes in a longitudinal perspective. The book will, therefore, be of relevance to those with interests in the Swedish welfare state as well as those with theoretical and researcn interests in the reproduction of inequality

‘An essential student-friendly text for Education Studies.’ Dr Gillian Forrester, Subject Head for Education & Early Childhood Studies, Liverpool John Moores University ‘Introducing students to the complexities of Education Studies is a difficult task and this book will go a long way to making it easier. The Trouble With Therapy: Sociology And Psychotherapy

The New Sociology of Ageing seeks to explore the challenges and opportunities of Ageing as a global force in its own right working alongside globalisation, urbanisation, new technology, and now both climate change and global pandemics, in transforming life in the 21st century. Through the eyes of a young sociology student and her multigenerational family, this book seeks to sketch out a new sociological framework to interpret this societal shift and to explore how the "New Old" – the baby boomer generation – might be mobilised as an agency of social change in transforming later life. It also explores the possibility of this generation as the co-architects of a new intergenerational social contract for the era ahead rather than just remaining the recipients of a post-war 20th-century social contract that society can no longer support. This book therefore seeks to fill a significant gap in current textbook provision by raising the profile and providing a broad overview of the emerging discipline of the sociology of ageing. With Britain as a case study and societies across the world as examples, it seeks to explore the emerging revolutions in work and retirement, the potential crises in pensions, healthcare and housing, and the transformations in both family life, and in our attitudes to sex and death in later life. It seeks to introduce students to the dynamics of demography as a sociological force of the future, as well as to alert them – as the younger generation – to the perils and the promises of longevity as societies across the world approach the 100-Year Life. Japan is nearly there; Europe and South East Asia are close behind and eventually even Africa will follow. This book will be of interest to undergraduate students and early scholars in sociology, social sciences, gerontology and social policy.

Life Cycles in Englandequips and encourages students of social istory at all levels to engage with source materials. The theme of the book is the human life-cycle, and in the first section each chapter deals with a different part of this cycle, from birth through childhood and youth to marriage, old age and death.Life Cycles in Englandfeatures an outline of the life cycle of men and women in England, roughly between 1650 and 1720; a collection of extracts from a broad range of texts written in the period, together with an accompanying commentary; and a collection of photographs and images and artefacts from the period. These features combine to provide the student with a lively and accessible introduction to the discipline of social history and a rich resource of material for continuing study.

Critical Sociology is a thoroughly revised, updated, and sophisticated introduction to the sociological perspective as a critical lens on society. Much has happened since the first edition: the Great Recession, the Obama presidency, the burgeoning role of social media, and recent global social movements such the Tea Party, Occupy Wall Street, and the Arab Spring. In this second edition, Buechler discusses the changing relationship between social movements and democracy.

The book contains chapters on how to think sociologically; an overview of scientific, humanistic, and critical schools of sociology; and a detailed exposition of the critical tradition.

New kinds of intimate relationships such as post-divorce families, co-habiting couples, ‘friends as family’ and same-sex unions are now commonplace. This book explores the growing diversity of family life by presenting a comprehensive assessment of recent research and theory, and foregrounds new thinking about ‘family’, parenting, childhood and personal life. A Sociology of Family Life queries notions of moral decline by revealing a remarkable persistence of commitment and reciprocity across cultures in traditional and new family relations. This insightful and innovative work examines factors such as gender, race, ethnic identity and new sexual lifestyles in relation to cultural customs, government policies and social inequalities. Global dimensions of intimate life are explored, including the impact of population policies on fertility in several nations; ethical dilemmas associated with reproductive technologies among different cultures; interdependencies between rich and poor nations through the globalization of domestic care; and transnational marriage strategies. This book will be indispensable for students across the social sciences interested in change in intimate relations. Selected by Choice as a 2013 Outstanding Academic Title

*The first comprehensive understanding of Du Bois for social scientists The Sociology of W. E. B. Du Bois provides a comprehensive introduction to the founding father of American sociological thought. Du Bois is now recognized as a pioneer of American scientific sociology and as someone who made foundational contributions to the sociology of race and to urban and community sociology. However, in this authoritative volume, noted scholars José Itzigsohn and Karida L. Brown provide a groundbreaking account of Du Bois’s theoretical contribution to sociology, or what they call the analysis of “racialized modernity.” Further, they examine the implications of developing a Du Boisian sociology for the practice of the discipline today. The full canon of Du Bois’s sociological works spans a lifetime of over ninety years in which his ideas evolved over much of the twentieth century. This broader and more systematic account of Du Bois’s contribution to sociology explores how his theories changed, evolved, and even developed to contradict earlier ideas. Careful parsing of seminal works provides a much needed overview for students and scholars looking to gain a better grasp of the ideas of Du Bois, in particular his understanding of racialized subjectivity, racialized social systems, and his scientific sociology. Further, the authors show that a Du Boisian sociology provides a robust analytical framework for the multilevel examination of individual-level processes–such as the formation of the self–and macro processes–such as group formation and mobilization or the structures of modernity–key concepts for a basic understanding of sociology.*

**Covering the period from Antiquity to Early Modernity, A Historical Sociology of Disability argues that disabled people have been treated in Western society as good to mistreat and - with the rise of Christianity - good to be good to. It examines the place and role of disabled people in the moral economy of the successive cultures that have constituted 'Western civilisation'. This book is the story of disability as it is imagined and re-imagined through the cultural lens of ableism. It is a story of invalidation; of the material habituations of culture and moral sentiment that paint pictures of disability as 'what not to be'. The author examines the forces of moral regulation that fall violently in behind the dehumanising, ontological fait accompli of disability invalidation, and explores the ways in which the normate community conceived of, narrated and acted in relation to disability. A Historical Sociology of Disability will be of interest to all scholars, students and activists working in the field of Disability Studies, as well as sociology, education, philosophy, theology and history. It will appeal to anyone who is interested in the past, present and future of the 'last civil rights movement'.**

**Critical Theorist Carlos Alberto Torres offers a political sociology of adult learning and education, based on Critical Social Theory and the always inspiring work of Paulo Freire. Empirically grounded and theoretically sophisticated, this new book follows the footsteps of his classic book published in the early nineties The Politics of Nonformal Education in Latin America. Torres book offers comparative and international sociological analyses of adult learning and education, an area in which there is an obsession with 'practice' and an aversion to theory, with some notable and laudable exceptions, but which has the potential to provide avenues for social justice education in ways that no other systems and policies can. This book revitalizes social theory in education, and provides ample evidence of the power of adult learning and education, examining a variety of policy documents connected with the various adult education congresses promoted by the UNESCO, which are thoroughly scrutinized for what they bring to or omit from the policy agenda. In the context of new developments in adult learning and education, particularly the impact of multiple globalizations, neoliberalism, and the new role of international organizations in reconceptualizing lifelong learning, new evidence-based research, new narratives, and the vibrancy of social movements striving for a new and possible world, it is clear that new theoretical designs were needed making this is a must-read book.**
