Coming of Age with the Atom, 1945-1955

A Complete Technical Guide

Metal Fabricator's Handbook

Includes Part 1A: Books and Part 1B: Pamphlets, Serials and Contributions to Periodicals

Following the atomic bombings of Hiroshima and Nagasaki, numerous "atomic narratives"—books, newspapers, magazines, textbooks, movies, and television programs—addressed the implications of the bomb. Post-World War II youth encountered atomic narratives in their daily lives at school, at home and in their communities, and were profoundly affected by what they read and saw. This multidisciplinary study examines the exposure of American youth to atomic narratives during the ten years following World War II. In addition, it examines the broader "social narrative of the atom," which included educational, social, cultural, and political activities that surrounded and involved American youth. The activities ranged from school and community programs to movies and television shows to government-sponsored traveling exhibits on atomic energy. The book also presents numerous examples of writings by postwar adolescents, who clearly expressed their conflicted feelings about growing up in such a tumultuous time, and shows how many of the issues commonly associated with the sixties generation, such as peace, fellowship, free expression, and environmental concern, can be traced to this earlier generation.

One of Fuller's most popular works, *Operating Manual for Spaceship Earth*, is a brilliant synthesis of his world view. In this very accessible volume, Fuller investigates the great challenges facing humanity. How will humanity survive? How does automation influence individualization?

How can we utilize our resources more effectively to realize our potential to end poverty in this generation? He questions the concept of specialization, calls for a design revolution of innovation, and offers advice on how to guide "spaceship earth" toward a sustainable future. Description
