"So often, when something "bad" happens, it may appear to be meaningless suffering. But what if your most difficult experiences are actually rich with hidden purpose--purpose that you yourself planned before you were born? Could it be that you chose yourl Using Lady Morgan's The Wild Irish Girl as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's Castle Rackrent through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

Small Engine and Equipment Maintenance is a comprehensive compilation of small engines and the maintenance practices that are required to maintain the efficiencies and durability of residential and commercial power equipment. The materials have been designed to support and entry-level small engines program and a small engines owner looking to prolong their power equipment investment. Quick response code technology is incorporated throughout that references easy-to-understand procedures and identifies critical operation components. The learner will reference this well after they leave the classroom.

There was no sharper con man on the streets of Chicago than Elijah Brookes. Women were his preferred prey—but no mark and no bankroll was safe when Elijah was on the prowl. Cool, beautiful Toni warned him, “Elijah, brothers be playin’ games so hard sometimes they don’t know when to stop. You know what I’m sayin’?” Elijah Brookes had to learn the ultimate lesson the hard way. So many games to be played, so little time.

Earth Day celebrates our beautiful planet and calls us to act on its behalf. Some people spend the day planting flowers or trees. Others organize neighborhood clean-ups, go on nature walks, or make recycled crafts. Readers will discover how a shared holiday can have multiple traditions and be celebrated in all sorts of ways.

"This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology."--Publisher's website.

What's Wrong With Wende?

Culture and Medicine in Modern Health Belief Systems

What's Wrong With Wende? I've known since I was young that something was wrong with me. Four-year-olds don't read newspapers. Ten-year-olds aren't supposed to be given their Mommy's wake up pills or slapped at eleven for telling on the man who raped her. I didn't mean to rob 7-11 when I was fifteen or get kicked out of the Navy at 17. I married too young and was a mommy too soon. Another marriage ended when they arrested him as a serial rapist suspected of murder. Drugs came easy with a direct line to the cook, and an organized crime affiliation. My family can't believe all I've survived, they were told I was dying twice, but God had other plans. This is the true story of my life. It hasn't always been pretty, and there's no way to sugar-coat ugly. So, if you're easily offended or faint of heart, my book may not be for you. If, on the other hand, you think your life is over cause you've made a mess of it, turn the page. Have I got a story for you?

You are six years old. Every day after school your father takes you to a sprawling castle filled with exotic animals, bowls of candy, and half-naked women catering to you every need. You have your own room. You have new friends. You have an uncle Hef who's always there for you. Welcome to the world of Playground, the true story of a young girl who grew up inside the Playboy Mansion. By the time she was fourteen, she'd done countless rages, had a secret affair with Hef's girlfriend, and was already losing her grip on reality. Schoolwork, family, and "ordinary people" had no meaning behind the iron gates of the Mansion, where celebrities frolicked, pool parties abounded, and her own father—Hugh Hefner's personal physician and best friend, the man nicknamed "Dr. Feel Good"—typically held court. Every day was a party, every night was an adventure, and through it all was a young girl falling faster and faster down the rabbit hole—trying desperately hard not to get lost.

Scholars in folklore and anthropology are more directly involved in various aspects of medicine—such as medical education, clinical pastoral care, and negotiation of transcultural issues—than ever before. Old models of investigation that artificially isolated "folk medicine," "complementary and alternative medicine," and "biomedicine" as mutually exclusive have proven too limited in exploring the real-life complexities of health belief systems as they observably exist and are applied by contemporary Americans. Recent research strongly suggests that individuals construct their health belief systmes from diverse sources of authority, including community and ethnic tradition, education, spiritual beliefs, personal experience, the influence of popular media, and perception of the goals and means of formal medicine. Healing Logics explores the diversity of these belief systems and how they interact—in competing, conflicting, and sometimes remarkably congruent ways. This book contains essays by leading scholars in the field and a comprehensive bibliography of folklore and medicine.

The Biographical Encyclopedia of Astronomers is a unique and valuable resource for historians and astronomers alike. The two volumes include approximately 1550 biographical sketches on astronomers from antiquity to modern times. It is the collective work of about 400 authors edited by an editorial board of 9 historians and astronomers, and provides additional details on the nature of an entry and some summary statistics on the content of entries. This new reference provides biographical information on astronomers and cosmologists by utilizing contemporary historical scholarship. Individual entries vary from 100 to 1500 words, including the likes of the superluminaries such as Newton and Einstein, as well as lesser-known astronomers like Galileo's acolyte, Mario Guiducci. A comprehensive contributor index helps researchers to identify the authors of important scientific topics and treatises.

A History of Beer and Brewing provides a comprehensive account of the history of beer. Research carried out during the last quarter of the 20th century has permitted us to re-think the way in which some ancient civilizations went about their beer production. There have also been some highly innovative technical developments, many of which have led to the sophistication and efficiency of 21st century brewing methodology. A History of Beer and Brewing covers a time-span of around eight thousand years and in doing so:
* Stimulates the reader to consider how, and why, the first fermented beverages might have originated
* Establishes some of the parameters that encompass the diverse range of alcoholic beverages assigned the generic name 'beer'
* Considers the possible means of dissemination of early brewing technologies from their Near Eastern origins
The book is aimed at a wide readership particularly beer enthusiasts. However the use of original quotations and references associated with them should enable the serious scholar to delve into this subject in even greater depth.

Why were so many religious images and objects broken and damaged in the course of the Reformation? Margaret Aston's magisterial new book charts the conflicting imperatives of destruction and rebuilding throughout the English Reformation from the desecration of images, rails and screens to bells, organs and stained glass windows. She explores the motivations of those who smashed images of the crucifixion in stained glass windows and who pulled down crosses and defaced symbols of the Trinity. She shows that destruction was part of a methodology of religious revolution designed to

change people as well as places and to forge in the long term new generations of new believers. Beyond blanked walls and whited windows were beliefs and minds impregnated by new modes of religious learning. Idol-breaking with its emphasis on the treacheries of images fundamentally transformed not only Anglican ways of worship but also of seeing, hearing and remembering.
