Gábor Lövei’s scientific communication course for students and scientists explores the intricacies involved in publishing primary scientific papers, and has been taught in more than twenty countries. Writing and Publishing Scientific Papers is the distillation of Lövei’s lecture notes and experience gathered over two decades; it is the coursebook many have been waiting for. The book’s three main sections correspond with the three main stages of a paper’s journey from idea to print: planning, writing, and publishing. Within the book’s chapters, complex questions such as ‘How to write the introduction?’ or ‘How to submit a manuscript?’ are broken down into smaller, more manageable problems that are then discussed in a straightforward, conversational manner, providing an easy and enjoyable reading experience. Writing and Publishing Scientific Papers stands out from its field by targeting scientists whose first language is not English. While also touching on matters of style and grammar, the book’s main goal is to advise on first principles of communication. This book is an excellent resource for any student or scientist wishing to learn more about the scientific publishing process and scientific communication. It will be especially useful to those coming from outside the English-speaking world and looking for a comprehensive guide for publishing their work in English.

The Modern Voice of an Irish Immigrant is author Imelda Cummins-DeMelkon?s fascinating account of her experience growing up in Ireland as one of twelve children, and the struggle for autonomy and independence that led to her choice of immigration to the United States.The author speaks honestly of the conflicts she experienced as a child and the overzealous paternal control that dominated her young life. The reader follows the author?s journey as it weaves between her experiences in both countries. Ultimately, The Modern Voice of an Irish Immigrant shows us that through a deep commitment to personal growth, one can indeed emerge whole and able to enjoy a full and complete life.Among the highly interesting topics the book explores are the changing face of the Catholic Church in Ireland and the United States, the uniform wish of immigrants to recreate the best of the culture they left behind, what it is to be a conscientious parent, the reality of ill and aging parents, and finally, the joy of the discovery of a life that is worth the often challenging effort.

A new, expanded edition of the authoritative handbook now available from Industrial Press for the first time.

Published by the Plastics Pipe Institute (PPI), the Handbook describes how polyethylene piping systems continue to provide utilities with a cost-effective solution to rehabilitate the underground infrastructure. The book will assist in designing and installing PE piping systems that can protect utilities and other end users from corrosion, earthquake damage and water loss due to leaky and corroded pipes and joints.

Through a carefully-maintained “building block” approach, this text offers an easy-to-understand guide to automotive, truck, and heavy equipment diesel engine technology in a single, comprehensive volume. Text focus is on state-of-the-art technology, as well as on the fundamental principles

underlying today’s technological advances in service and repair procedures. Industry accepted practices are identified; and, readers are encouraged to formulate a sound understanding of both the “why” and the “how” of modern diesel engines and equipment. Thorough, up-to-date treatment of

diesel technology encompasses major advancements in the field, especially recent developments in the use of electronics in heavy-duty trucks, off-highway equipment, and marine applications. The text’s primary focus is on state-of- the-art “electronic fuel injection” systems such as those being

used by such manufacturers as Caterpillar, Cummins, Detroit Diesel, Volvo, and Mack. A systematic, structured organization helps readers learn step-by-step, beginning with engine systems, and working logically through intake/exhaust, cooling, lubrication, and fuel injection systems,

highlighting major changes in today’s modern engines.

This guide presents information on planning and managing microfilming projects, incorporating co-operative programmes, service bureaux and the impact of automation for library staff with deteriorating collections.

*This is a long-overdue volume dedicated to space trajectory optimization. Interest in the subject has grown, as space missions of increasing levels of sophistication, complexity, and scientific return - hardly imaginable in the 1960s - have been designed and flown. Although the basic tools of optimization theory remain an accepted canon, there has been a revolution in the manner in which they are applied and in the development of numerical optimization. This volume purposely includes a variety of both analytical and numerical approaches to trajectory optimization. The choice of authors has been guided by the editor's intention to assemble the most expert and active researchers in the various specialities presented. The authors were given considerable freedom to choose their subjects, and although this may yield a somewhat eclectic volume, it also yields chapters written with palpable enthusiasm and relevance to contemporary problems.*

*After her nightmarish recovery from a serious car accident, Faye gets horrible news from her doctor, and it hits her hard like a rock: she can't bear children. In extreme shock, she breaks off her engagement, leaves her job and confines herself in her family home. One day, she meets her brother's best friend , and her soul makes a first step to healing.*

As today’s spark-ignition and diesel engines have to fulfil constantly increasing demands with regard to CO2 reduction, emissions, weight and lifetime, detailed knowledge of the components of an internal combustion engine is absolutely essential. Automotive engineers can no longer survive without such expertise, regardless of whether they are involved in design, or answers to questions relating to the design, production and machining of cylinder components in a comprehensive technical analysis.

Bringing together a range of leading academics and experts on social democratic politics and policy, Why the Left Loses offers an international, comparative view of the changing political landscape, examining the degree to which the centre-left project is exhausted and is able to renew its message in a neo-liberal age.

*In 2010, the composer Gustav Mahler celebrates his one hundred fiftieth birthday. In Mahler Re-Composed, linguist George Cummins shares a collection of six interrelated essays that provide a fresh perspective on difficult questions familiar to Mahler lovers. Cummins, a teacher of Russian and Czech at Tulane University, brings a uniquely Czech perspective to the study of Mahlers personality and work. In his careful examination of the composers life and work, Cummins begins with an introduction that provides a glimpse into Mahler the Czech and continues with an account of Mahlers conversion from Judaism to Catholicism while making his way to the Vienna Hofoper directorship. Cummins also takes a skeptical look at the legend of Mahler as an impotent, humorless neurotic and recreates the friendship between Strauss and Mahlertwo of the greatest musicians of the early twentieth century.*

*Women have a long history of keeping the lights burning, from tending ancient altar flames or bonfires to modern-day lighthouse keeping. Yet most of their stories are little-known. Guiding Lights includes true stories from around the world, chronicling the lives of the extraordinary women who mind the world’s storm-battered towers. From Hannah Sutton and her partner Grant, the two caretakers living alone on Tasmania’s wild Maatsuyker Island, to Karen Zacharuk, the keeper in charge of Cape Beale on Canada’s Vancouver Island, where bears, cougars and wolves roam, the lives of lighthouse women are not for the faint of heart.*

*Stunning photographs from throughout history accompany accounts of the dramatic torching of Puysegur Point, one of NZ’s most inhospitable lighthouses; ‘haunted’ lighthouses in across the US and their tragic tales; lighthouse accidents and emergencies around the world; and two of the world’s most legendary lighthouse women: Ida Lewis (US) and Grace Darling (UK), who risked their lives to save others. The book also explores our dual perception of lighthouses: are they comforting and romantic beacons symbolizing hope and trust, or storm-lashed and forbidding towers with echoes of lonely, mad keepers? Whatever our perception, stories of women’s courage and dedication in minding the lights – then and now – continue to capture our imagination and inspire.*
