ACRP Report 78: "The original problem statement and objectives for ACRP 02-16 as developed by the project panel are restated as follows: 'Increased levels of demand at airports in the United States may result in a growth in airport GSE activity and an associated increase in airport surface emissions. Local air quality and global climate change concerns, regulatory pressures, and the desire to be environmentally responsible have resulted in a growing number

of airport programs around the United States looking to assess and reduce airport emissions. Although much is known about aircraft fleets, operations, and emissions, comparatively little is known about GSE. The available GSE data are outdated, unreliable, and limited. Accurate GSE data are needed by the FAA and airport sponsors to plan adequately and to balance the growing demands of air travel with air quality concerns. Proactive strategies that reduce surface emissions may help airports address air quality concerns. As such, research is needed to obtain additional information on GSE equipment and to

identify programs and best practices that could reduce GSE emissions for GSE owners, operators, and airports.' In response to this problem statement, the primary objectives of this research were to (1) develop a tutorial that describes GSE operations and identifies potential strategies to reduce emissions from powered GSE for use by GSE owners and operators and (2) conduct a representative inventory of powered GSE at airports to help the industry assess the contribution of GSE to air quality impacts at airports. ." --from p. 1.

Power Transmissions

Производственная эксплуатация строительных и дорожных машин

This books contains the Proceedings of the 4th International Conference on Power Transmissions, that was held in Sinaia, Romania from June 20 -23, 2012. Power Transmissions is a very complex and multi-disciplinary scientific field of Mechanical Engineering that covers the different types of transmissions (mechanical, hydraulic, pneumatic) as well as all the machine elements involved, such as gears, bearings, shafts, couplings and a lot more. It concerns not only their basic theory

but also their design, analysis, testing, application and maintenance. The requirements set to modern power transmissions are really tough to meet: They need to be more efficient, stronger, smaller, noiseless, easier to produce and to cost less. There is a strong demand to become easier in operation and maintenance, or even automatic and in maintenance-free. Last but not least, they should be easily recycled and respect the environment. Joint efforts of specialists from both academia and industry can significantly contribute to fulfill these needs. The main goal of this conference was to bring together experts from all over the world and present the latest developments in the field of Power Transmissions.

Symmetries, coupled with the mathematical concept of group theory, are an essential conceptual backbone in the formulation of quantum field theories capable of describing the world of elementary particles. This primer is an introduction to and survey of the underlying concepts and structures needed in order to understand and handle these powerful tools. Specifically, in Part I of the book the symmetries and related group

theoretical structures of the Minkowskian space-time manifold are analyzed, while Part II examines the internal symmetries and their related unitary groups, where the interactions between fundamental particles are encoded as we know them from the present standard model of particle physics. This book, based on several courses given by the authors, addresses advanced graduate students and non-specialist researchers wishing to enter

Pastoralists were a vital economic and social force in ancient societies around the globe, transforming landscapes poorly suited for agriculture into spaces of vast productive potential while simultaneously connecting mobile and sedentary communities alike across considerable distances. Drawing from the rich archaeological records of Asia, Africa, and Europe, *Isotopic Investigations of Pastoralism in Prehistory* brings together the latest studies employing heavy and light

stable isotopic analyses of humans and animals to investigate pastoralist diets, movement, and animal management strategies. The contributions presented in this volume highlight new methodological developments while simultaneously drawing attention to the diverse environmental factors that contribute to isotopic variation in human, plant, and animal tissues. Particular attention is paid to how pastoralist decisions regarding animal pasturing and mobility can be teased out of complex isotopic datasets, and also to the challenges in extracting information on the scales of human mobility in pastoralist

Using clear language, this book shows you how to build in, evaluate, and demonstrate reliability and availability of components, equipment, and systems. It presents the state of the art in theory and practice, and is based on the author's 30 years' experience, half in industry and half as professor of reliability engineering at the ETH, Zurich. In this extended edition, new models and considerations have been added for reliability data analysis and fault tolerant reconfigurable repairable systems including reward and frequency / duration aspects. New design rules for imperfect switching,

incomplete coverage, items with more than 2 states, and phased-mission systems, as well as a Monte Carlo approach useful for rare events are given. Trends in quality management are outlined. Methods and tools are given in such a way that they can be tailored to cover different reliability requirement levels and be used to investigate safety as well. The book contains a large number of tables, figures, and examples to support the practical aspects.
