Sudden cardiac death is a global health threat for which we have only partial answers. With growing elucidation of the underlying pathophysiological mechanisms of sudden cardiac death, better patient identification and treatment options are being developed. These include risk stratification paradigms, ICD therapy, pharmacological options, ablative procedures, and other treatments. This book covers many of these options, including defibrillator technology and clinical applications. It also examines pathophysiological pathways and etiologies as well as highlights risk-stratification in ion channel diseases and structural heart disease such as dilated cardiomyopathy.

First Aid/CPR/AED for Schools and the Community

***Pediatric Resuscitation is reviewed in this issue of Pediatric Clinics of North America, guest edited by Drs. Steve Schexnayder and Arno Zaritsky. Authorities in the field have come together to pen articles on Background and Epidemiology; CPR - Why the New Emphasis?; Airway Management; Arrhythmias, Cardioversion, and Defibrillation; Vascular Access and Medications; Medical Emergency Teams; Teamwork in Resuscitation; Resuscitation Education; Outcome Following Cardiac Arrest; Extracorporeal Life Support during CPR; Post-resuscitation Care; and Future Directions.***

***The State of the World's Biodiversity for Food and Agriculture presents the first global assessment of biodiversity for food and agriculture worldwide. Biodiversity for food and agriculture is the diversity of plants, animals and micro-organisms at genetic, species and ecosystem levels, present in and around crop, livestock, forest and aquatic production systems. It is essential to the structure, functions and processes of these systems, to livelihoods and food security, and to the supply of a wide range of ecosystem services. It has been managed or influenced by farmers, livestock keepers, forest dwellers, fish farmers and fisherfolk for hundreds of generations. Prepared through a participatory, country-driven process, the report draws on information from 91 country reports to provide a description of the roles and importance of biodiversity for food and agriculture, the drivers of change affecting it and its current status and trends. It describes the state of efforts to promote the sustainable use and conservation of biodiversity for food and agriculture, including through the development of supporting policies, legal frameworks, institutions and capacities. It concludes with a discussion of needs and challenges in the future management of biodiversity for food and agriculture. The report complements other global assessments prepared under the auspices of the Commission on Genetic Resources for Food and Agriculture, which have focused on the state of genetic resources within particular sectors of food and agriculture.***

ACSM's Resources for the Personal Trainer provides a broad introduction to the field of personal training, covering both basic science topics and practical application. It was originally designed to help people prepare for the ACSM Personal Training Certification Exam. It continues to serve that function, but the market for it has expanded to practitioners in the field looking for an additional resource, as well as in an academic setting where the book is a core text for personal training programs.

Emergency Aid explores the the world response to natural disasters and war, and the people and organizations that are working to help people in need. This title also focuses on people who have been helped, the progress that has already been made, and the challenges still left to be met. The young reader analyzes the stories and develops their own opinion of what can be done to effectively respond to disasters. The book has been developed to address many of the Common Core specific goals, higher level thinking skills, and progressive learning strategies from informational texts for middle grade and junior high level students.

Ventricular arrhythmias cause most cases of sudden cardiac death, which is the leading cause of death in the US. This issue reviews the causes of arrhythmias and the promising new drugs and devices to treat arrhythmias.

The United Nations Commission on Life-Saving Commodities (UNCLSC, 2012) defined 13 health products to end preventable deaths of woman and children. One of those 13 products is the neonatal resuscitator, is indispensable medical device to save newborns from asphyxia at birth. For the efficient use of neonatal resuscitation, training of healthcare professionals using neonatal resuscitation manikins is the most effective approach. Critical lifesaving trainings calls for the need of neonatal resuscitation manikins with the right features. The purpose of the WHO neonatal resuscitation manikin: technical specifications is to provide a minimum standard baseline to meet the increasing demand to procure good quality, affordable, accessible, and

appropriate neonatal resuscitation manikins. Towards the development of this baseline, this document includes compilation of available scientific evidence from technical literature, international publications, expert reviews, and an industry survey which was conducted by WHO medical devices team.

*Since the first edition of Textbook of Adult Emergency Medicine was published twenty years ago, there has been enormous change in the way emergency care is delivered. This has occurred both in countries where emergency medicine was originally developed and in those where its application was limited because of cost. Emergency medicine is now perceived as the cornerstone of response to acute illness regardless of resources. This fully revised Fifth Edition provides clear and consistent coverage of this constantly evolving specialty. Building on the success of previous editions it covers all the major topics relevant to the practice of emergency medicine. The book will prove invaluable to professionals working in this setting - including nurse specialists and paramedics - who require concise, highly practical guidance, incorporating the latest best practice and evidence-based guidelines. This edition comes with an enhanced electronic version with video and self-assessment content, providing a richer learning experience and making rapid reference easier than ever before, anytime, anywhere. A comprehensive textbook of adult emergency medicine for trainee doctors - covers all the problems likely to present to a trainee in the emergency department. Chapters are highly readable and concise - boxes summarise chapter key points and highlight controversial areas of treatment. The content is highly practical, clinically orientated and thoroughly updated in all the core subjects There have been major updates in topics such as airway, shock and sepsis where guidelines have changed rapidly. The imaging chapters have also evolved with changing practice and improved technology, to be concordant with evidence on the importance of image interpretation by emergency clinicians. There are major sections on other skills and issues of key importance to today's advanced emergency medicine practitioner, such as staffing, overcrowding, triage, patient safety and quality measures. In addition, difficult topics such as death and dying, the challenging patient, ethics, giving evidence and domestic violence are covered. Governance, training, research and organisational subjects such as disaster planning and response, humanitarian emergencies and refugee medicine are included to give the reader a framework to understand the complexity of managing major emergency systems of care. Harlequin Intrigue brings you three new edge-of-your-seat romances for one great price, available now for a limited time only from July 1 to July 31! This Harlequin Intrigue bundle includes The Smoky Mountain Mist by Paula Graves, Fearless by HelenKay Dimon, and For the Baby's Sake by Beverly Long. **Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.**
