Global Change studies are increasingly being considered a vital source of information to understand the Earth Environment, in particular in the framework of human-induced climate change and land use transformation. Satellite Earth Observing systems provide a unique tool to monitor those changes. While the range of applications and innovative techniques is constantly increasing, this

book provides a summary of key case studies where satellite data offer critical information to understand the causes and effects of those environmental changes, minimizing their negative impacts. This book will be of interest to researchers and practitioners in the field of remote sensing, geographical information, meteorology and environmental sciences. Also scientists and graduate up to post-graduate level students in environmental science will find valuable information in this book. The Middle Ages continue to provide an important touchstone for the way the modern West presents itself and its relationship with the rest of the globe. This volume

brings together leading scholars of literature and history, together with musicians, novelists, librarians, and museum curators in order to present exciting, up-to-date perspectives on how and why the Middle Ages continue to matter in the 20th and 21st centuries. Presented here, their essays represent a unique dialogue between scholars and practitioners of 'medievalism'. Framed by an introductory essay on the broad history of the continuing evolution of the idea of 'The Middle Ages' from the 14th century to the present day, chapters deal with subjects as diverse as: the use of Old Norse sagas by Republican deniers of climate change; the way figures like the Irish hero Cu Chulainn

This book will appeal to anyone interested in the Middle Ages and its impact on recent political and cultural history. It is dedicated to the memory of Seamus Heaney, who gave his last overseas

The first practical yet in-depth exploration of how to reclaim the post-industrial landscape, this volume includes excellent case studies by practitioners and policy makers from around the US, giving first rate practical examples. The book addresses new thinking about landscape, which applies new techniques to the task of transforming outdated and disused post-extraction landscapes through design. In the USA alone, there are nearly 500,000 abandoned mines in need of reclamation and this book provides the first in-depth guidance on this real and

Drawing on the work of the well-known Project for Reclamation Excellence at Harvard's Graduate School of Design, this volume outlines the latest design thinking, theory and practice for landscape planners, landscape architects and designers and others interested in maximizing the future potential of reclaimed land.

The Economic Impact of Digital Technologies offers a profoundly illuminating examination of ICT transformations in Europe and its critical role in greater social inequality. It presents scholars and policy makers with original and practical tools to benchmark and assess the ICT diffusion and inclusion process. The core message of book is that a coherent European strategy for embedding ICT technologies in society is long overdue. Social differences in ICT use persist and are in some cases widening, yet despite this fact there is a dearth of

research on remedying digital inequalities. This is of particular importance given that relative levels of ICT use, investment and research can often explain variations in economic performance between industrialised countries. The purpose of this book is to fill the gap in the literature by presenting key evidence on the economic benefits (and costs) deriving from investment in an inclusive information society. The authors propose indicators and indexes of digital development and e-Inclusion (and its flip-side e-exclusion) to assess the relationship between inclusive ICT and wider economic and social

Presenting the methodology to monitor countries' performance and ICT use, together with original measures and policy suggestions, this book will be indispensable to policymakers, scholars and postgraduate students in a variety of areas including economic growth, innovation, industrial and organizational studies, information and technology, European studies, and public and social policy.

papers from chemical modellers, who work on the basis of geochemical representations of the formative water bodies, and from basin-wide depositional-stratigraphical modellers, who propose depositional scenarios that are fitted to individual basinal pictures. Until now there have been only a few studies of evaporite formation that explain the characteristic features we observe in the real rock record. This volume is a collection of relevant papers in which these features are integrated in a realistic manner, based on our new understanding of saline water bodies, to the diverse tectonic, chemical and

The determination of food authenticity is a vital component of quality control. Its importance has been highlighted in recent years by high-profile cases in the global supply chain such as the European horsemeat and the Chinese melamine scandals, the latter of which led to six fatalities and

Consumers and retailers demand that the products they purchase and sell are what they purport to be. This book covers the most advanced techniques used for the authentication of a vast number of products around the world. The reader will be informed about the latest pertinent analytical techniques. Chapters focus on the novel techniques and markers that have emerged in recent years. An introductory section presents the concepts of food authentication, while

the second section examines in detail the analytical techniques for the detection of fraud relating to geographical, botanical, species, and processing origin and production methods of food materials and ingredients. Finally, the third section looks at consumer attitudes towards food authenticity, the application of bioinformatics to this field, and the Editor's conclusions and future outlook. Beyond being a reference for researchers working in food authentication, this book will serve as an essential resource for analytical scientists interested in the field and food scientists aiming to appreciate

This volume provides recent research results in data analysis, classification and multivariate statistics and highlights perspectives for new scientific developments within these areas. Particular attention is devoted to methodological issues in clustering, statistical modeling and data mining. The volume also contains significant contributions to a wide range of applications such as finance, marketing, and social sciences. The papers in this volume were first presented at the 7th Conference of the Classification and Data Analysis Group (ClaDAG) of the Italian Statistical Society, held at the University of Catania, Italy.

The main purpose of this book is not only to present recent studies and advances in the field of social science research, but also to stimulate discussion on related practical issues concerning statistics,

Accordingly, a broad range of tools and techniques that can be used to solve problems on these topics are presented in detail in this book, which offers an ideal reference work for all researchers interested in effective quantitative and qualitative tools. The content is divided into three major sections. The first, which is titled “Social work”, collects papers on problems related to the social sciences, e.g. social cohesion, health, and digital technologies. Papers in the second part, “Education and teaching issues,” address qualitative aspects, education, learning, violence, diversity, disability, and ageing, while the book’s final part, “Recent trends in qualitative and quantitative models for socio-economic systems and social work”, features contributions on both qualitative and quantitative issues. The book is based on a scientific collaboration, in the social sciences, mathematics, statistics, and

The contributions, which have been selected using a peer-review process, examine a wide variety of topics related to the social sciences in general, while also highlighting new and intriguing empirical research conducted in various countries. Given its scope, the book will appeal, in equal measure, to sociologists, mathematicians, statisticians and philosophers, and more generally to scholars and specialists in related fields.

Fractal Cities is the pioneering study of the development and use of fractal geometry for understanding and planning the physical form of cities, showing how this geometry enables cities to be simulated through computer graphics. making authority and assets available for grabbing. These assets can be stolen, created by artificial shortage, or become available as the result of a market failure. Assets that are especially exposed to corruption include profits from the private sector, revenues from the export of natural resources, aid and loans, and the proceeds of crime. Whether or not opportunities for corruption are exploited depends on the individuals involved, the institution or society they are part of, and the law enforcement circumstances. Corruption usually persists in situations in which players are aware of the facts but nonetheless condone the practice. Absence of reaction can result from information asymmetries (in which the

The economy is examined by the authors as a complex interactive system. The emphasis is on the direct interaction between agents rather than on the indirect and autonomous interaction through the market mechanism. urban life is about. The Urban Lifeworld contributes to our understanding of the cultural role of cities by offering new insight into the analysis of urban experience. Two exceptional cities, New York and Copenhagen, are the focus of this exploration of cultural representations of urban life, which investigates the contrasts between perceptions and formation of the urban lifeworld.

Integrating sociological, aesthetic and anthropological approaches to urban questions, this collection of essays presents a new vision of the cityscape which will enrich both academic debate and public life.

with decision-making processes: computer science, education, linguistics, sociology, and management. The decision-making process in social contexts is based on the analysis of sound alternatives using evaluative criteria. Therefore, this process is one that can be rational or irrational, and can be based on knowledge and/or beliefs. A decision-making process always produces a final decision, which may or may not imply prompt action, and increases the chances of choosing the best possible alternative. The book is divided into four main parts. The concepts covered in the first part, on computer science, explore how the rise of algorithms and the growth in computing power over the years can

influence decision-making processes. In the second part, some traditional and innovative ideas and methods used in education are presented: compulsory schooling, inclusive schools, higher education, etc. In turn, the third part focuses on linguistics aspects, and examines how progress is manifested in language. The fourth part, on sociology, explores how society can be influenced by social norms, human interactions, culture, and religion. Management, regarded as a science of the decision-making process, is explored in the last part of this book. Selected organizations strategies, objectives and resources are presented, e.g., human resources, financial resources, and technological resources. The

**The book provides the reader with a
broad view of the topic by including both
methodological and application papers.**
Indeed the application papers relate to a

number of diverse scientific fields ranging from hedonic models of house pricing to demography, from health care to regional economics, from the analysis of R&D spillovers to the study of retail market spatial characteristics. Particular emphasis is given to regional economic applications of spatial econometrics methods with a number of contributions specifically focused on the spatial concentration of economic activities and agglomeration, regional paths of

economic growth, regional convergence of income and productivity and the evolution of regional employment. Most of the papers appearing in this book were solicited from the International Workshop on Spatial Econometrics and Statistics held in Rome (Italy) in 2006. This open access book presents current knowledge about ecosystem services (ES) in urban planning, and discusses various urban ES topics such as spatial distribution of urban ecosystems,

population distribution, and physical infrastructure properties. The book addresses all these issues by: i) investigating to what extent ecosystem services are currently included in urban plans, and discussing what is still needed to improve planning practice; ii) illustrating how to develop ecosystem services indicators and information that can be used by urban planners to enhance plan design; iii) demonstrating the application of ES assessments to

support urban planning processes through case studies; and iv) reflecting on criteria for addressing equity in urban planning through ecosystem service assessments, by exploring issues associated with the supply of, the access to and demand for ES by citizens. Through fully worked out case studies, from policy questions, to baseline analysis and indicators, and from option comparison to proposed solutions, the book offers readers detailed and

accessible coverage of outstanding issues and proposed solutions to better integrate ES in city planning. The overall purpose of the book is to provide a compact reference that can be used by researchers as a key resource offering an updated perspective and overview on the field, as well as by practitioners and planners/decision makers as a source of inspiration for their activity.
