In PSYCHOLOGY: THEMES AND VARIATIONS, BRIEFER VERSION, Wayne Weiten continues his proven combination of a scientifically rigorous text with selective pedagogy that makes learning easy for students. Weiten's approach is backed by a straightforward writing style, unparalleled in-text visuals and didactic art program, and in-book review to help users prioritize and retain the core concepts. Weiten surveys psychology's broad range of content with three aims: to illuminate the process of research and its intrinsic relationship to application (themes); to show both the unity and diversity of the subject (variations), and to invite users to the study of psychology by respecting their ability to master its fundamental concepts. Weiten's themes (including empiricism, theoretical diversity, sociohistorical contexts, multifactorial causation, cultural heritage, heredity and environment, and subjectivity of experience) and variations provide unifying threads across chapters that help users see the connections among different research areas in psychology.

English is becoming an important language for foreign students who do not have English as their mother tongue. English as a second language is difficult to learn. Most of the learners are on their university study and are considered adult learners. The study was made to improve the English learning experience of international students whose aim is to learn the language. This book is about factors that affect the learning ability of English learners. Stress is one of the major factors in learning. There are some other factors that affect the ability to learn. Some of those factors are peer, environment, academics and teachers. This study suggests nursing interventions for teachers to enhance the learning ability of their students. This book can help other researchers to improve their studies regarding adult learning.

The Psychology of Happiness and Well-being is not a quick fix guide to happiness. Its main emphasis is to point out the findings on happiness studies that have withstood the rigor of "controlled" trials. This book demonstrates that several intuitively appealing techniques that show initial promise, fail to show the benefits claimed, when put to scientific scrutiny. On a more optimistic note the author investigates a number of tried and tested techniques in the field of Positive Psychology that can actually help us feel happier, as well as techniques in Cognitive Behaviour Therapy that can improve our well-being. This book includes many practical examples as well as activities that individuals can undertake to improve their happiness and well-being. The author has a degree in Cognitive and Social Psychology as well as a degree in Mathematics and Physics. In addition he has an advanced qualification in Managing Change and has been practicing Mindfulness Meditation for 5 years.

This book offers a broad exploration of classic and contemporary research on current and emerging topics in the field of psychology. Investigates the "how's" and "why's" of research methods presented, and offers frequent examination of the validity of conclusions drawn. Presents information in a lively conversational style. Investigates behavioral issues surrounding things like gender and sexual orientation, economic status, cultural diversity, motivation and emotion, and workplace issues relate to the study of psychology. Compares findings of psychological research with widely held popular beliefs. For readers interested in learning psychological concepts, examining the research methods and outcomes, and understanding the impact of these issues on everyday life.

Offering comprehensive coverage with an applied, practical perspective, Community Corrections, Second Edition covers all the major topics in the field while emphasizing reintegration and community partnerships and focusing strongly on assessment, risk prediction, and classification. Author Robert D. Hanser draws on his expertise with offender treatment planning, special needs populations, and the comparative criminal justice fields to present a complete assessment of the issues and challenges facing community corrections today. Insights into how the day-to-day practitioner conducts business in community corrections are illustrated by such things as the increasing role technology plays in the field.

Handbook for Teaching Introductory Psychology

Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.
