Read Free Dbe Feb Mar 2014

Physical Science Paper 2

geoengineering the climate. The study, chaired by Professor John Shepherd FRS, was researched and written over a period of twelve months by twelve leading academics representing science, economics, law and social science. Man-made climate change is

Read Free Dbe Feb Mar 2014 Physical Science Paper 2

happening and its impacts and costs will be large, serious and unevenly spread. The impacts may be reduced by adaptation and moderated by mitigation, especially by reducing emissions of greenhouse gases.

However, global efforts to reduce

Read Free Dbe Feb Mar 2014 Physical Science Paper 2

emissions have not yet been sufficiently successful to provide confidence that the reductions needed to avoid dangerous climate change will be achieved. This has led to growing interest in geoengineering, defined here as the deliberate large-

Read Free Dbe Feb Mar 2014
Physical Science Paper 2

scale manipulation of the planetary environment to counteract anthropogenic climate change.

However, despite this interest, there has been a lack of accessible, high quality information on the proposed geoengineering techniques which

Read Free Dbe Feb Mar 2014 Physical Science Paper 2

remain unproven and potentially dangerous. This study provides a detailed assessment of the various methods and considers the potential efficiency and unintended consequences they may pose. It divides geoengineering methods into

Read Free Dbe Feb Mar 2014 Physical Science Paper 2

two basic categories: 1. Carbon Dioxide Removal (CDR) techniques, which remove CO₂ from the atmosphere. As they address the root cause of climate change, rising CO₂ concentrations, they have relatively low uncertainties and risks. However,

Read Free Dbe Feb Mar 2014

Physical Science Paper 2

these techniques work slowly to reduce global temperatures. 2. Solar Radiation Management (SRM) techniques, which reflect a small percentage of the sun's light and heat back into space. These methods act quickly, and so may represent the

Read Free Dbe Feb Mar 2014 Physical Science Paper 2

only way to lower global temperatures quickly in the event of a climate crisis. However, they only reduce some, but not all, effects of climate change, while possibly creating other problems . They also do not affect CO2 levels and

Read Free Dbe Feb Mar 2014
Physical Science Paper 2

therefore fail to address the wider effects of rising CO₂, including ocean acidification. The report recommends: Parties to the UNFCCC should make increased efforts towards mitigating and adapting to climate change and in particular to

Read Free Dbe Feb Mar 2014
Physical Science Paper 2

agreeing to global emissions reductions of at least 50% on 1990 levels by 2050 and more thereafter; CDR and SRM geoengineering methods should only be considered as part of a wider package of options for addressing climate change. CDR

Read Free Dbe Feb Mar 2014
Physical Science Paper 2

methods should be regarded as preferable to SRM methods. Relevant UK government departments, in association with the UK Research Councils, should together fund a 10 year geoengineering research programme at a level of the order of
