Death Is An Illusion A Logical Explanation Based On Martinus Worldview 1st Edition

The Illusion of Death is a rational examination of what might happen to us after we die, guided solely by science, reason, and logic. Each consciousness has its own unique combination of "something" that gives rise to it and it alone, and not to a different consciousness. What, then, is there to prevent the same combination from occurring once again after death, causing each person to be conscious and alive anew? Using the most recent research from fields as disparate as psychology, physics, and philosophy,

Dr. John Dworetzky examines the possibilities of an afterlife, and comes to a surprising but comforting conclusion.

Because every single one of us will die, most of us would like to know what—if anything—awaits us afterward, not to mention the fate of lost loved ones. Given the nearly universal vested interest in deciding this question in favor of an afterlife, it is no surprise that the vast majority of books on the topic affirm the reality of life after death without a backward glance. But the evidence of our senses and the ever-gaining strength of scientific evidence strongly suggest otherwise. In *The Myth of an Afterlife: The Case against Life after Death*, Michael Martin and Keith Augustine collect a series of contributions that redress

this imbalance in the literature by providing a strong, comprehensive, and up-to-date casebook of the chief arguments against an afterlife.

Divided into four separate sections, this collection opens with a broad overview of the issues, as contributors consider the strongest evidence of whether or not we survive death—in particular the biological basis of all mental states and their grounding in brain activity that ceases to function at death.

Next, contributors consider a host of conceptual and empirical difficulties that confront the various ways of “surviving” death—from bodiless minds to bodily resurrection to any form of posthumous survival. Then essayists turn to internal inconsistencies between traditional theological conceptions of an

afterlife—heaven, hell, karmic rebirth—and widely held ethical principles central to the belief systems supporting those notions. In the final section, authors offer critical evaluations of the main types of evidence for an afterlife. Fully interdisciplinary, *The Myth of an Afterlife: The Case against Life after Death* brings together a variety of fields of research to make that case, including cognitive neuroscience, philosophy of mind, personal identity, philosophy of religion, moral philosophy, psychical research, and anomalistic psychology. As the definitive casebook of arguments against life after death, this collection is required reading for any instructor, researcher, and student of philosophy, religious studies, or theology. provocative issues new to readers, regardless of background, from those who believe fervently in the reality of an afterlife to those who do not or are undecided on the matter.

The overcoming of death is a serious undertaking because death is a part of the nature one one's being; and therefore, not what it appears to be. When Death is reconciled with life, it becomes a means of interdimensional travel. We realize that it wasnt there in the first place. Therefore, the overcoming of death is to take place within one's present consciousness, for death is the counterpart of life in the first place. Therefore, the resurrection unto life is from the death that is hidden in life. It is the dead that appear to be living that are resurrected unto life. Death is something that is a part of ones

present consciousness, not something off somewhere in the so-called afterlife. The resurrection of the dead is unto conscious life or immortality, or back into the realm of unconscious death; for life and death occupy the same space. It is a matter of seeing death as it is, not just as it appears to be. In that death is not what it appears to be, the overcoming of death is not what it appears to be. Therefore, it is a real possibility. It can be realized within ones lifetime. The Overcoming of Death is the means of bringing the realization of conscious immortality to the awareness of ones present consciousness in this lifetime. It reveals why it is that losing life is finding it, and how it is that it is the dead that are living that hear the voice of the Son of God and are

Zimmer's interest is piqued, and he soon finds himself embarking on a journey around the world to research a book on this mysterious figure, who vanished from sight in 1929 and has been presumed dead for sixty years. When the book is published the following year, a letter turns up in Zimmer's mailbox bearing a return address from a small town in New Mexico-supposedly written by Hector's wife. "Hector has read your book and would like to meet you. Are you interested in paying us a visit?" Is the letter a hoax, or is Hector Mann still alive? liberal class to confront the rise of the corporate state and the consequences of a liberalism that has become profoundly bankrupted. Hedges argues there are five pillars of the liberal establishment — the press, liberal religious institutions, labor unions, universities and the Democratic Party — and that each of these institutions, more concerned with status and privilege than justice and progress, sold out the constituents they represented. In doing so, the liberal class has become irrelevant to society at large and ultimately the corporate power elite they once served.

The whole of Western, natural philosophy is undergoing a sea change again, increasingly being forced upon us by the experimental findings of quantum theory, and at the same time, toward doubt and uncertainty in the physical explanations of the universes genesis and structure. Biocentrism completes this shift in worldview, turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around. "Might this be a dream?" In this book, distinguished philosopher J. J. Valberg approaches the familiar question about dream and reality by seeking to identify its subject matter: what is it that would be the dream if "this" were a dream? It turns out to be a subject matter that contains the whole of the world, space, and time but which, like consciousness for Sartre, is nothing "in itself." This subject matter, the "personal horizon," lies at the heart

of the main topics--the first person, the self, and the self in time--explored at length in the book. The personal horizon is, Valberg contends, the subject matter whose center each of us occupies, and which for each of us ceases with death. This ceasing to be presents itself solipsistically not just as the end of everything "for me" but as the end of everything absolutely. Yet since it is the same for everyone, this cannot be. Death thus confronts us with an impossible fact: something that cannot be but will be. The puzzle about death is one of several extraphilosophical puzzles about the self that Valberg discusses, puzzles that can trouble everyday

as Bonggi found the true meaning of God and faith by exploring the difference between the limited and the infinite state of being, simply through physical health and what we could do with our body, and actually how related our faith and understanding of the enigma of all secrets of life are to our physical health. For Dr Eden, life is eternal from the moment the soul knows how to treat it, and time is only a matter of our perceptions. Past, present and future are all parts of the same time frame. It is only our mind that puts them apart. The one without this wholly perception is not a pure soul, and believes in death and cries on it. The soul comes from the infinite part of the universe and

It locates in unified cells, called embryo then fetus, which are nourished by water and oxygen and emerged in a deep calm inside the amniotic cavity. The expression "Near-Death Experience" is associated in the popular understanding with access to knowledge about our transition between the states of life and death. But how should such experiences be interpreted? Are they verifiable with scientific methods? If so, how can they be explained? Attempting to relate matters of scientific knowledge to subjective experience and the realm of belief is a difficult balancing act and has led to a variety

of approaches to the topic. This work scrutinizes the diverse views and also myths, about near-death experiences and describes them from a scientific standpoint. Situated at the intersection of neuroscience, psychology, philosophy and religious studies this book will appeal to a broad audience of both scientists and general readers.

In this exploration, J. Thomas Devins connects three controversial religious topics (Jesus's resurrection, Shroud of Turin and rainbow body) using their common denominator, the science of the atom. As weird, preposterous and outrageous as it sounds, we each have the capacity to dissolve our body into its atomic parts. That which happened to Jesus on the first Easter Sunday is within the capability of each human being that is willing to follow a structured, disciplined mind training lifestyle. Tibetan Buddhists, have gracefully exited the planet, like Jesus, without leaving a corpse behind, even in modern times. The human body is but proxy for the human mind. The book is transformational for the reader and a major wakeup call to science and religion. 1) It replaces the notion of a transcendent God with the workings of the human mind. 2) Abrahamic religions, particularly Christianity, must rethink their foundational doctrines. The words of Genesis 3:19, .." .to dust you shall return" can't be universally applied. 3) Mainstream science must end its negative bias against the paranormal in its rigid methods of inquiry. The book brings the known paranormal experience that is frequently demonstrated in the laboratory by fringe science into the light of the real world. 4) The book elevates the Gnostic Gospel of Thomas into prominence. Thomas is the only Gospel that accounts for the resurrection/rainbow body

phenomenon and the role of the mind.

Connecting the dots, Devins concludes that we are all here, on the planet, because we intend to be here. It is in this knowledge we find the reality of reincarnation and the law of karma; sticky issues which religion and science also need to address. A lifelong Catholic, scientifically educated, and graduate of the school of hard knocks, Devins concludes that the book's revelations will be largely ignored by religion and science. Religion because it is too heavily invested in the biblical notion of death to change. Science because of its engrained attitude against the paranormal. Timely change, if it is to happen, must come from a fiery, renewed attitude of truth seeking that initiates in the Sunday morning pew. existence. In bold contrast to the predominant Freudian school of thought, Becker tackles the problem of the vital lie - man's refusal to acknowledge his own mortality. The book argues that human civilisation is a defence against the knowledge that we are mortal beings. Becker states that humans live in both the physical world and a symbolic world of meaning, which is where our 'immortality project' resides. We create in order to become immortal - to become part of something we believe will last forever. In this way we hope to give our lives meaning. In *The Denial of Death*, Becker sheds new light on the nature of humanity and issues a call to life and its living that still resonates decades after it was written.

In the wake of his death, the life of this brilliant yet reclusive prodigy known as "The Great Bendini" is meticulously chronicled by an unnamed narrator who encountered Vaughn when he himself was a boy. Set amidst dusty Northern California towns in the 1990s, the narrator--now an academic and father to a son of his own--unfurls a layered testimony that blurs the line between the observer and the observed; between ambitions that have the potential to transcend, and those with the capacity to destroy. In the manner of the eighteenth-century philosophe, Freud argued that religion and science were mortal enemies. Early in the century, he began to think about religion psychoanalytically and to discuss it in his writings. The *Future of an Illusion*, Freud's best known and most emphatic psychoanalytic exploration of religion, is the culmination of a lifelong pattern of thinking. We live in a world that has distorted the very concept of a life. Why do we remember the past and not the future? What does it mean for time to "flow"? Do we exist in time or does time exist in us? In lyric, accessible prose, Carlo Rovelli invites us to consider questions about the nature of time that continue to puzzle physicists and philosophers alike. For most readers this is unfamiliar terrain. We all experience time, but the more scientists learn about it, the more mysterious it remains. We think of it as uniform and universal, moving steadily from past to future, measured by clocks.

Rovelli tears down these assumptions one by one, revealing a strange universe where at the most fundamental level time disappears. He explains how the theory of quantum gravity attempts to understand and give meaning to the resulting extreme landscape of this timeless world. Weaving together ideas from philosophy, science and literature, he suggests that our perception of the flow of time depends on our perspective, better understood starting from the structure of our brain and emotions than from the physical universe. Already a bestseller in Italy, and written with the poetic vitality that made *Seven Brief Lessons on Physics* so appealing, *The Order of Time* offers a profoundly intelligent,

we knew about life, death, the universe, and the nature of reality itself. The first step is acknowledging that our existing model of reality is looking increasingly creaky in the face of recent scientific discoveries.

Science tells us with some precision that the universe is 26.8 percent dark matter, 68.3 percent dark energy, and only 4.9 percent ordinary matter, but must confess that it doesn't really know what dark matter is and knows even less about dark energy. Science is increasingly pointing toward an infinite universe but has no ability to explain what that really means.

Concepts such as time, space, and even causality are increasingly being demonstrated as meaningless. All of science is based on information passing through our consciousness but science hasn't the foggiest idea

what consciousness is, and it can't explain the linkage between subatomic states and observation by conscious observers. Science describes life as a random occurrence in a dead universe but has no real understanding of how life began or why the universe appears to be exquisitely designed for the emergence of life. The biocentrism theory isn't a rejection of science. Quite the opposite. Biocentrism challenges us to fully accept the implications of the latest scientific findings in fields ranging from plant biology and cosmology to quantum entanglement and consciousness. By listening to what the science is telling us, it becomes increasingly clear that life and consciousness are fundamental to any true understanding of the universe. This forces a fundamental rethinking of everything

we thought we knew about life, death, and our place in the universe.

Luci de Foix is an archeologist and artifact expert who travels extensively to countries attempting to save their priceless treasures. On a trip to Greece, she discovers a clay shard with writings from an ancient society that disappeared during an earthquake on their island of Helike. When her best friend and adopted sister, Sarah, is kidnapped by a ruthless Russian oligarch determined to find the legendary treasure of Helike, they struggle to survive against terrifying odds, only to discover a secret that governments will kill for ... even her own.

committing armed robbery.

Would it not be wonderful if we did not only live one life? Would it not be great to know that death was an illusion and that we lived on after our physical body had stopped functioning? If we could know that death was not the end of life, would that not make us much less worried or afraid, make us much more confident and happier? If we could simply with one stroke eliminate all fear of death, would that not give our lives a whole new meaning and perspective? This is what this book offers the reader. Reincarnation in a Nutshell explains why reincarnation is much more than a belief. With mathematical precision the authors explain why reincarnation simply has to be factual and they present the reasoning, the logic and the evidence for this claim. They also explain how

reincarnation takes place and what the master plan of life is. This book is your exit key from the one-life theory and with this new insight you will never doubt your own immortality. Your outlook on life will forever change when you realize that death is an illusion and that your consciousness cannot be extinguished. The insight presented in this book originates from the spiritual science of Martinus, the Danish visionary and mystic. When he was 30, Martinus experienced an expansion of his consciousness which gave him cosmic consciousness. His work is the most profound spiritual revelation ever to have been disclosed to humankind.

Discusses how William James's work suggests a world without will, self, or time and how research supports this perspective. A Seminary Co-op Notable Book of 2016 William James is often considered a scientist compromised by his advocacy of mysticism and parapsychology. Jonathan Bricklin argues James can also be viewed as a mystic compromised by his commitment to common sense. James wanted to believe in will, self, and time, but his deepest insights suggested otherwise. "Is consciousness already there waiting to be uncovered and is it a veridical revelation of reality?" James asked shortly before his death in 1910. A century after his death, research from neuroscience, physics, psychology, and

parapsychology is making the case, both theoretically and experimentally, that answers James's question in the affirmative. By separating what James passionately wanted to believe, based on common sense, from what his insights and researches led him to believe, Bricklin shows how James himself laid the groundwork for this more challenging view of existence. The non-reality of will, self, and time is consistent with James's psychology of volition, his epistemology of self, and his belief that Newtonian, objective, even-flowing time does not exist. Jonathan Bricklin is a Program Director at the New York Open Center and the editor of *Sciousness*.

Avawatz. And it spans a century from the earliest recollections and the oldest records to that day in 1933 when much of the valley was finally set aside as a National Monument. This is the story of an illusory land, of the people it attracted and of the dreams and delusions they pursued-the story of the metals in its mountains and the salts in its sinks, of its desiccating heat and its revitalizing springs, and of all the riches of its scenery and lore-the story of Indians and horse thieves, lost argonauts and lost mine hunters, prospectors and promoters, miners and millionaires, stockholders and stock sharps, homesteaders and hermits, writers and tourists. But mostly this is the story of the illusions-the illusions of a shortcut to the gold diggings that lured the forty-niners, of inescapable deadliness that hung in the name they left behind, of lost bonanzas that grew out of the few nuggets they found, of immeasurable riches spread
