

Demag Cranes And Components Parts Manual

This primer is directed at experts and practitioners in intralogistics who are concerned with optimizing material flows. The presentation is comprehensive covering both, practical and theoretical aspects with a moderate degree of specialization, using clear and concise language. Areas of operation as well as technical standards of all relevant components and functions are described. Recent developments in technology and in the markets are taken into account. The goal of this book is to further stronger use of automated guided transport systems and the enhancement of their future performance.

This book is the translated English version of a text on industrial surveys, originally published in Slovak by SPEKTRUM STU Publishing. This updated version is not only a translation of the original, but also a reviewed, extended version, which reflects up-to-date international standards and regulations. The book covers topics in engineering surveying not available in other publications in this complex form, and addresses the design methodology, data processing and implementation of geodetic measurements under specific conditions to make industrial work environments safer and more efficient. The book begins by introducing readers to these conditions, and then discusses design of maps, geodetic networks and information systems of industrial plants, the usage of cartesian and polar coordinate measuring systems, terrestrial laser scanning technology, as well as measurement of cranes, rotary kilns and special objects of nuclear power plants. The book will be of use to teachers, students, practitioners (e.g. surveyors), quality production managers, equipment designers and mechanical engineers.

The Republic of Korea achieved a double revolution in the second half of the twentieth century. In just over three decades, South Korea transformed itself from an underdeveloped, agrarian country into an affluent, industrialized one. At the same time, democracy replaced a long series of military authoritarian regimes. These historic changes began under President Park Chung Hee, who seized power through a military coup in 1961 and ruled South Korea until his assassination on October 26, 1979. While the state's dominant role in South Korea's rapid industrialization is widely accepted, the degree to which Park was personally responsible for changing the national character remains hotly debated. This book examines the rationale and ideals behind Park's philosophy of national development in order to evaluate the degree to which the national character and moral values were reconstructed.

This book is a printed edition of the Special Issue" Smart machines, Remote Sensing, Precision Farming, Processes, Mechatronic, Materials and Policies for Safety and Health Aspects" that was published in Agriculture
